Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Employment, Earnings and Hours,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-4090) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Emploi, gains et durée du travail

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-4090) ou au centre de consultation de Statistique Canada à:

Les données du mois le plus récent sont des estimations préliminaires et seront révisées lors de la prochaine parution de cette publication.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

Note on CANSIM

Some of the data published in Employment, Earnings and Hours (Catalogue 72-002) are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. Data for urban areas are also available on CANSIM. Users interested in accessing data via CANSIM should contact one of Statistics Canada's regional centres at the numbers listed on the inside front cover of this publication or contact CANSIM directly at (613)951-8200.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

Note concernant CANSIM

Quelques données publiées dans l'Emploi, gains et durée du travail (n° 72-002 au catalogue) peuvent être obtenues sous forme lisible par machine de CANSIM (Système Canadien d'information socio-économique). Les séries historiques sont généralement plus longues sur CANSIM. Les données pour les régions urbaines sont aussi disponibles sur CANSIM. Les utilisateurs voulant obtenir des chiffres par l'intermédiaire de CANSIM doivent contacter un des centres de consultation de Statistique Canada dont les numéros de téléphone se trouvent à l'endos du couvert de cette publication ou en communiquant directement avec CANSIM au (613)951-8200.

Highlights

Preliminary Estimates¹ (Data not seasonally adjusted) January 1989

Industrial Aggregate Summary

The preliminary estimate of average weekly earnings for all employees in the industrial aggregate² was \$474.39 for January. The increase of \$4.16 (+0.9%) from the previous month is similar to that usually observed between December and January. Average weekly earnings increased over January 1988 by \$19.89 (+4.4%) (not adjusted for inflation).

Canada industrial aggregate employment was estimated at 10,049,000 - a marginal decrease of 19,000 (-0.2%) from December. The employment increase of 254,000 (+2.6%) over January 1988 was the largest year-over-year percentage growth since September 1987.

Average Weekly Earnings

- Between December and January, average weekly earnings in forestry and in transportation, communication and other utilities increased less than usual for the time of year.
- Finance, insurance and real estate increased more than usual.
- Community, business and personal services showed little change when a decrease is usually observed.
- The year-over-year increase in earnings in construction (+6.4%) was its highest of the last 12 months.
- Between December and January, earnings in Nova Scotia increased less than usual.
- Prince Edward Island showed little change when an increase is usually observed. Saskatchewan registered an increase at a time of year when a decrease is usually observed.

Faits saillants

Estimations préliminaires¹ (Données non désaisonnalisées) Janvier 1989

Sommaire pour l'ensemble des activités économiques

Selon les données préliminaires, en janvier 1989, la rémunération hebdomadaire moyenne pour l'ensemble des activités économiques² était estimée à \$474.39 en hausse de \$4.16 (+0.9%). Cette augmentation est semblable à celle observée dans les années passées entre décembre et janvier. Par rapport à janvier 1988, la rémunération était en hausse de \$19.89 (+4.4%) (non ajustée pour l'inflation).

Le nombre de salariés pour l'ensemble des activités économiques au Canada a atteint 10,049,000, une légère baisse de 19,000 (-0.2%) par rapport à décembre (données non désaisonnalisées). Par rapport à janvier 1988, le nombre de salariés a augmenté de 254,000 (+2.6%), sa plus forte croissance annuelle depuis septembre 1987.

Rémunération hebdomadaire moyenne

- Entre décembre et janvier, la rémunération dans les forêts et dans les transports, communications et autres services publics montrait des hausses plus faibles que par les années passées.
- La rémunération hebdomadaire moyenne dans les finances, assurances et affaires immobilières augmentait plus que d'habitude.
- La rémunération hebdomadaire moyenne dans les services socio-culturels, commerciaux et personnels demeurait virtuellement inchangée plutôt que de diminuer comme à l'ordinaire.
- La rémunération hebdomadaire moyenne dans la construction subit sa plus forte augmentation annuelle (+6.4%) depuis les 12 derniers mois.
- Entre décembre et janvier, la rémunération en Nouvelle-Écosse augmentait moins qu'à l'ordinaire.
- L'Île-du-Prince-Édouard rapportait peu de changement plutôt que l'augmentation habituellement observée. La rémunération hebdomadaire moyenne en Saskatchewan augmentait plutôt que de diminuer.

See note on "Statistical presentation" under "Concepts and Methods" at the back of this publication.

The industrial aggregate is the sum of all industries with the exception of agriculture, fishing and trapping, religious organizations, private households and military personnel.

Voir la partie "Présentation statistique" sous la rubrique "concepts et méthodes", à la fin de la présente publication.

² L'ensemble des activités économiques est la somme de toutes les industries à l'exception de l'agriculture, la pêche et le piégeage, les organismes religieux, les ménages privés et les services de défense.

Estimated number of employees

- Between December and January, estimated employment in forestry and in finance, insurance and real estate decreased when an increase is usually observed.
- Mines, quarries and oil wells reported a larger than usual decrease while trade had a smaller than usual decline.
- The year-to-year increases in forestry (+13.9%) and in community, business and personal services (+3.0%) were their highest of the last 12 months, while the increase in finance, insurance and real estate (+3.0%) was its lowest.
- Mines, quarries and oil wells (-1.9%) registered its fourth consecutive year-over-year decline.
- Manufacturing (+1.3%) had its first year-over-year increase after four consecutive months of decreases.
- As a result of a labour dispute, Newfoundland registered a decrease instead of the usual increase.
- Prince Edward Island and Manitoba decreased more than usual between December and January.
- Ontario experienced little change at a time of year when a decrease is usually observed.
- Alberta increased when a decline is usually observed.
- Ontario (+1.9%) showed its highest year-to-year percentage increase of the last 12 months.

Hours and Hourly Earnings

- At the Canada industrial aggregate level, average weekly hours for employees paid by the hour (who account for approximately half of industrial aggregate employment) were estimated at 31.5.
- Average weekly hours for hourly paid employees were estimated at 38.8 in the goods-producing industries and 27.8 in the service-producing industries.
- Average hourly earnings for employees paid by the hour were estimated at \$11.91 in January.
 Earnings were \$14.05 in the goods-producing industries and \$10.40 in the service-producing industries.

Emploi

- Entre décembre et janvier, l'estimation du nombre de salariés dans les forêts et dans les finances, assurances et affaires immobilières indiquait des diminutions plutôt que les augmentations ordinairement observées.
- L'estimation du nombre de salariés dans les mines, carrières et puits de pétrole montrait une diminution plus forte qu'à l'ordinaire alors que celle du commerce diminuait moins que d'habitude.
- Les taux d'augmentation annuels de l'emploi dans les forêts (+13.9%) et dans les services socio-culturels, commerciaux et personnels (+3.0%) était à leur plus haut niveau des 12 derniers mois alors que ceux des finances, assurances et affaires immobilières (+3.0%) étaient à leur plus bas.
- Les mines, carrières et puits de pétrole (-1.9%) enregistraient leur quatrième diminution annuelle consécutive.
- Les manufactures (+1.3%) montraient une première augmentation annuelle après quatre mois consécutifs de diminution.
- À cause d'un conflit de travail le nombre de salariés à Terre-Neuve diminuait plutôt que d'augmenter.
- À l'Île-du-Prince-Édouard et au Manitoba, l'estimation de l'emploi montrait des diminutions plus fortes que d'habitude.
- En Ontario, on observait peu de changement plutôt que la diminution habituelle.
- Entre décembre et janvier, l'emploi en Alberta augmentait plutôt que de diminuer.
- L'Ontario (+1.9%) enregistrait son plus haut taux d'augmentation annuel des 12 derniers mois.

Heures et rémunération horaire

- Au niveau de l'ensemble des activités économiques au Canada, les heures hebdomadaires moyennes des salariés rémunérés à l'heure (ceux-ci représentent environ la moitié des salariés de l'ensemble des activités économiques) étaient estimées à 31.5.
- Selon les estimations, le nombre d'heures hebdomadaires moyennes des salariés rémunérés à l'heure atteignait 38.8 dans la branche productrice de biens et 27.8 dans la branche productrice de services.
- En janvier 1989, la rémunération horaire moyenne des salariés rémunérés à l'heure était estimée à \$11.91. Elle était estimée à \$14.05 dans la branche productrice de biens et à \$10.40 dans la branche productrice de services.

Employment, Earnings and Hours 1988 Annual Averages

The 1988 Annual Averages are now available. Selected series for Canada and provinces are presented in the following tables.

Estimates by detailed industry for Canada, the provinces and territories, and estimates for selected metropolitan or urban areas are available on request on a cost recovery basis. These user-specified tabulations can be ordered in hard copy or on micro-computer diskettes.

A summary report containing 1988 annual averages will be available shortly. Similar reports entitled;

- Annual Averages and Time Series, 1983-1986
- Annual Averages and monthly estimates, 1987

are presently available at the cost of \$50.00/copy.

Also available, free of charge, are the coefficient of variations by industry, for Canada and the provinces, for the year 1988.

For more information, please contact:

Labour Division Analysis and Dissemination (613) 951-4090

Emploi, rémunération et heures de travail Moyennes annuelles - 1988

Les moyennes annuelles pour l'année 1988 sont maintenant disponibles. Certaines séries pour le Canada et les provinces sont présentées dans les tableaux qui suivent.

Des estimations détaillées par industries pour le Canada, les provinces et territoires ainsi que pour certaines régions métropolitaines ou urbaines sont disponibles sur demandes, moyennant le recouvrement des coûts. Ces totalisations spéciales sont disponibles sur divers supports (imprimés d'ordinateurs et disquettes).

Un rapport sommaire contenant des moyennes annuelles pour 1988 sera disponible bientôt. Des rapports semblables intitulés:

- Moyennes annuelles et séries chronologiques, 1983-1986
- Moyennes annuelles et estimations mensuelles, 1987

sont présentement disponibles au coût de \$50.00/copie.

De plus, les coefficients de variations par activité économique, pour le Canada et les provinces, pour l'année 1988 sont maintemant disponibles gratuitement.

CONCEPTS AND METHODS

Objectives

The Survey of Employment, Payrolls and Hours is designed to measure, on a monthly basis, the levels and month-to-month trends of employment, paid hours and earnings. These measures are compiled at detailed industrial and geographic levels.

All industries are covered by the survey with the exception of agriculture, fishing and trapping, private household services, religious organizations, and military services.

Source of Data

The statistics contained in this report are based on information obtained through a mail survey of firms, institutions and organizations of all sizes.

The firm is defined as any business entity whether incorporated or not; it comprises sole proprietorships, partnerships, corporations and other forms of organization such as co-operatives. Most firms consist of only one "establishment" (see definition under Industrial Classification) but, in some cases, the firm is made up of a number of establishments which may or may not be engaged in the same kind of economic activity.

The universe for the survey is derived from a central file of employers maintained by the Business Register Division of Statistics Canada.

Industrial Classification

All firms are assigned to an industry on the basis of their principal activity. In instances where the firm is engaged in only one kind of industrial activity, the industrial classification is straightforward. Classification problems arise when a firm is active in more than one kind of classifiable industrial activity. This usually occurs when a firm operates more than one establishment. The establishment (typically a factory, mine, store or a similar unit) is defined, for statistical purposes, as the smallest separate operating entity capable of reporting all elements of basic industrial data which permit the calculation of "census value added" or "gross mark up" or "gross profit" as well as data on employment and payrolls.

For purposes of detailed geographical statistics, the establishment is often sub-divided into **reporting units** which, although not capable of reporting all basic industrial statistics, can report employment, payrolls and hours data for particular locations.

The industrial classification of the statistics contained in this report is based on the 1970 version of the Standard Industrial Classification. A description of the various industries and groups of industries is contained in the "Standard Industrial Classification Manual", Catalogue 12-501. The "S.I.C. Code" columns on the tables correspond to the codes of this manual. These tables also contain the following groupings which are not part of the "Standard Industrial Classification Manual":

- a) Industrial aggregate (031-951) represents the sum of all the industries included in the survey (see Objectives).
- Goods-producing industries (031-421) comprise forestry, mining, manufacturing and construction.

CONCEPTS ET MÉTHODES

Objectifs

L'enquête sur l'emploi, la rémunération et les heures de travail a pour objet de mesurer mensuellement les niveaux et les tendances de l'emploi, des heures rémunérées et des gains. Ces mesures sont rassemblées à des niveaux détaillés selon l'activité économique et le lieu géographique.

L'enquête vise tous les secteurs de l'activité économique sauf l'agriculture, la pêche et le piégeage, le service domestique des ménages, les organismes religieux et les services de la défense.

Source des données

Les statistiques présentées dans ce bulletin se fondent sur des renseignements recueillis au moyen d'une enquête postale menée auprès des entreprises et autres organismes ou établissements de toutes tailles.

Le terme entreprise désigne toute entité commerciale ou industrielle constituée ou non en corporation; il peut s'agir d'une entreprise à propriétaire unique, d'une société en nom collectif, d'une corporation ou d'une autre forme quelconque d'organisation, telle une coopérative. La plupart des entreprises ne comptent qu'un seul "établissement" (voir la définition sous la rubrique "Classement par activité économique") mais, dans certains cas, l'entreprise peut regrouper plusieurs établissements qui exercent ou non le même genre d'activité.

L'univers de l'enquête est établi à l'aide d'un registre central des employeurs tenu par la Division du registre des entreprises de Statistique Canada.

Classement par activité économique

Toutes les **entreprises** appartiennent à une branche d'activité économique déterminée en fonction de leur activité principale. Si l'entreprise n'exerce qu'un seul genre d'activité économique, le classement est simple. Les problèmes surgissent lorsqu'elle en exerce plus d'un, par exemple lorsqu'elle possède plus d'un **établissement**. À des fins statistiques, on définit l'établissement (en général une usine, une mine, un magasin ou une unité semblable) comme la plus petite unité constituant un ensemble fonctionnel distinct capable de déclarer, à l'égard de l'activité économique, tous les éléments statistiques de base qui permettent de calculer la "valeur ajoutée" ou la "majoration brute" ou le "bénéfice brut", ainsi que des données sur l'emploi et la rémunération.

Pour obtenir des statistiques géographiques détaillées, souvent on subdivise l'établissement en **unités déclarantes** qui, bien qu'elles ne puissent fournir toutes les statistiques de base, sont en mesure de déclarer des données sur l'emploi, la rémunération et les heures de travail relativement à certains endroits.

Le classement des statistiques que nous présentons dans ce volume s'inspire de la Classification des activités économiques, de 1970. Vous trouverez une description de ces diverses activités et de leurs groupements dans le bulletir de la Classification des activités économiques, nº 12-501 au catalogue. Les codes C.A.É. qui apparaissent dans les colonnes de certains tableaux de notre publication correspondent au codes de ce bulletin. Les tableaux en question renferment aussi les groupes suivants, qui ne figurent pas dans la Classification des activités économiques:

- a) Ensemble des activités économiques (031-951) Il s'agit de la somme des diverses activités économiques visées par l'enquête (voir objectifs).
- b) Branche productrice de biens (031-421) Ce groupe englobe les forêts, les mines, les manufactures et la construction.

- c) Service-producing industries (501-951) consist of transportation, communication and other utilities, trade, finance, insurance and real estate, services (except for religious organizations and private households), and public administration (with the exception of military personnel, and other government services).
- d) Durable goods manufacturing (durable) includes wood industries (251-259), furniture and fixture industries (261-268), primary metal industries (291-298), metal fabricating industries except machinery and transportation equipment (301-309), machinery industries except electrical machinery (311-318), transportation equipment industries (321-329), electrical products industries (331-339), and non-metallic mineral products industries (351-359).
- e) Non-durable goods manufacturing (non-dur) is the sum of food and beverage industries (101-109), tobacco products industries (151-153), rubber and plastic products industries (162-165), leather industries (172-179), textile industries (181-189), knitting mills (231-239), clothing industries (243-249), paper and allied industries (271-274), printing, publishing and allied industries (286-289), petroleum and coal products industries (365-369), chemical and chemical products industries (372-379), and miscellaneous manufacturing industries (391-399).
- f) Building construction (404, 421) comprises building construction (404) and special-trade contractors (421).
- g) Industrial and Heavy (Engineering) construction (406, 409) includes highway, bridge and street construction (406) and other construction (409).
- h) Education services (809T) consist of kindergartens and nursery schools (801), elementary and secondary schools (802), schools of arts and performing arts (803), vocational centers, trade schools and business colleges (804), post-secondary non-university educational institutions (805), universities and colleges (806), and education and related services (809).
- i) Public administration (909-951) contains only the establishments engaged in activities that are governmental in character and those serving as internal service agencies of the public service. Government owned establishments primarily engaged in activities assigned to other industries are classified in those industries along with similar establishments owned by non-government bodies. Therefore, data included in this industry division do not represent the actual number of persons employed by government at any level.

Geographic Classification

Reporting units are assigned to a province, a census division, an economic region (for the province of Quebec and Ontario) and, where applicable, to a metropolitan or urban area. The survey selected metropolitan and urban areas as delineated for the 1981 Census of Population; these areas usually consist of the urban centre as well as the surrounding territory and had a population of 25,000 inhabitants or more. The reporting units not located in a tabulated urban area or not allocated to a compiled census division are included in the provincial and national totals.

A description of the various geographical areas is contained in the "Standard Geographical Classification Manual, 1981", Catalogue 12-567.

- c) Branche des services (501-951) Englobe les transports, les communications et autres services publics, le commerce, les finances, assurances et affaires immobilières, les services (sauf les organismes religieux et les ménages privés), et l'administration publique (à l'exception du personnel militaire et des autres services gouvernementaux).
- d) Fabrication des biens durables (durables) Englobe les industries du bois (251-259), l'industrie du meuble et des accessoires d'ameublement (261-268), l'industrie de première transformation des métaux (291-298), l'industrie des produits métalliques (sauf les machines et le matériel de transport) (301-309), la fabrication des machines (sauf le matériel électrique) (311-318), l'industrie du matériel de transport (321-329), l'industrie des appareils et du matériel électriques (331-339) et l'industrie des produits minéraux non métalliques (351-359).
- e) Fabrication des biens non durables (non dur.) Englobe l'industrie des aliments et boissons (101-109), l'industrie du tabac (151-153), l'industrie du caoutchouc et des produits en matière plastique (162-165), l'industrie du cuir (172-179), l'industrie textile (181-189), la bonneterie (231-239), l'industrie de l'habillement (243-249), l'industrie du papier et des produits connexes (271-274), l'imprimerie, l'édition et industries connexes (286-289), l'industrie du pétrole, du charbon et de leurs dérivés (365-369), l'industrie chimique et des produits connexes (372-379), et les industries manufacturières diverses (391-399).
- f) Bâtiment (404, 421) Englobe la construction de bâtiments (404) et l'activité des entrepreneurs spécialisés (421).
- g) Construction industrielle et lourde (travaux de génie) (406, 409) Englobe la construction de routes, ponts et rues (406) et autres constructions (409).
- h) Enseignement et services connexes (809T) Englobe les jardins d'enfants et écoles maternelles (801), les écoles primaires et secondaires (802), les écoles de beaux-arts (803), les centres de formation professionnelle, écoles de métiers et collèges commerciaux (804), les établissements d'enseignement postsecondaire non universitaire (805), les universités et collèges (806), et l'enseignement et services connexes (809).
- d'administration publique (909-951) Comprend les établissements dont les activités ont un caractère essentiellement gouvernemental, et les organismes auxiliaires assurant les services internes de l'État. Les établissements publics dont l'activité dominante relève d'autres activités économiques sont classés sous les mêmes rubriques que les établissements privés semblables. Ainsi, les données publiées pour cette division économique ne représentent pas le nombre réel de personnes employées par les différents pouvoirs publics.

Classement géographique

On attribue les unités déclarantes à une province, à une division de recensement, à une région économique (pour les provinces suivantes: Québec et Ontario) et, s'il y a lieu, à une région métropolitaine ou urbaine. Les régions métropolitaines et urbaines choisies pour l'enquête sont celles du recensement de la population de 1981; ces régions, qui se composent habituellement d'un centre urbain et du territoire environnant, comptaient lors du dernier recensement 25,000 habitants ou plus. Les unités déclarantes situées en denors de toute région urbaine indiquée dans les tableaux, ou non attribuées à une division de recensement prise en compte, font partie des totaux provinciaux el nationaux.

La description des diverses régions geographiques se trouve dans la "Classification géographique type, 1981", nº 12-567 au catalogue.

Definitions

1. Reference Period

Conceptually, the data in this report refer to the last seven days in the specified month. In practice, few firms keep payroll records covering precisely this period. Therefore, firms are asked to report for their last pay period or pay periods in each month. When the reported pay period is longer than one week, the data are reduced to a week using the number of days the firm usually operates during a week divided by the number of working days covered by the reported pay period.

If, owing to **strikes**, unpaid holidays or other similar unpaid circumstances, the data reported are not representative of the last seven days of the month, adjustments are made to reflect the economic situation of the reference period (i.e. when a strike effects the last seven days of the survey month, the derived data will reflect the strike situation).

2. Employee

All persons drawing pay for services rendered or for paid absences and for whom the employer is required to complete a Revenue Canada T-4 Supplementary Form constitute employees.

The employee concept comprises full-time employees, part-time employees (those who regularly work fewer hours than the standard work week of the establishment) and casual or temporary employees (those who are hired for discontinuous periods or on an irregular basis). It also comprises working owners, directors, partners and other officers of incorporated businesses.

The employee concept excludes owners or partners of unincorporated businesses and professional practices, the self-employed, unpaid family workers, persons doing non-remunerative work, pensioners, home workers, members of elected or appointed bodies, persons working outside Canada and military personnel. It also excludes persons who did not receive any pay from the employer for the entire survey reference period (e.g. persons on strike, persons on unpaid holidays, persons receiving remuneration from an insurance, Workmen's Compensation or other related fund, etc.); however, employees paid from the employer for a part of the reference period and unemployed or on strike for the rest are counted as employed.

The employees are classified into the following categories:

a) Employees paid by the hour

Any employee whose basic wage is expressed as an hourly rate.

o) Salaried Employees

Any employee whose basic remuneration is a fixed amount for a period of at least one week.

:) Other Employees

Those employees whose basic remuneration is in the form of commissions, piece rates, mileage allowances, etc.

Définitions

1. Période de référence

En théorie, les données sur l'emploi se rapportent aux sept derniers jours du mois de référence. Dans la pratique, peu d'entreprises tiennent des registres de paye pour cette période précise; on demande donc aux répondants de faire porter leur déclaration sur la(les) dernière(s) période(s) de paye de chaque mois. Lorsque la période de paye sur laquelle porte la déclaration dépasse une semaine, on rajuste les données en divisant le nombre de jours d'activité hebdomadaire de l'entreprise par le nombre de jours ouvrables compris dans la période de paye sur laquelle porte la déclaration.

Si, en raison d'une **grève**, d'un congé non payé ou d'autres circonstances semblables, les données déclarées ne sont pas représentatives des sept derniers jours du mois, on procède aux rajustements qui s'imposent afin de traduire la situation qui régnait pendant la période de référence (cela signifie que lorsqu'une grève touche les sept derniers jours du mois döenquête, les données qui en découlent reflètent l'état de grève).

2. Salarié

Toute personne rétribuée pour ses services ou ses absences et pour laquelle l'employeur doit remplir une déclaration T-4 Supplémentaire de Revenu Canada, est un salarié.

Le terme "salarié" désigne les salariés à temps plein, les salariés à temps partiel (ceux qui travaillent régulièrement un nombre d'heures inférieur à la semaine normale de travail de l'entreprise) et les salariés occasionnels ou temporaires (ceux qui sont embauchés de façon irrégulière ou temporaire). Il désigne aussi les propriétaires, les administrateurs, les associés et les autres dirigeants actifs des entreprises constituées en corporation.

Le concept de salarié exclut les propriétaires et les associés des entreprises non constituées en corporation et ceux des bureaux voués à l'exercice d'une profession libérale, les travailleurs autonomes, les travailleurs familiaux non rémunérés, les bénévoles, les retraités, les travailleurs à domicile, les membres des corps élus ou nommés, les personnes travaillant à l'exterieur du Canada et le personnel militaire. Sont également exclus les travailleurs n'ayant pas reçu de paye de leur employeur pendant la période de référence de l'enquête (i.e. les personnes en grève, en congé non payé, celles recevant une rémunération aux termes d'un régime d'assurance, d'une caisse d'indemnisation des accidents au travail ou d'une caisse analogue, etc.); cependant, les travailleurs rémunérés par leur employeur pour une partie de la période de référence, mais en chômage ou en grève pendant l'autre partie, sont quand même considérés comme salariés.

Les salariés sont classés dans les catégories suivantes:

a) Salariés rémunérés à l'heure

Tout salarié dont la rémunération de base est calculée selon un taux horaire.

b) Employés

Tout salarié dont la rémunération de base constitue une somme fixe versée pour une période d'au moins une semaine.

c) Autres salariés

Tout salarié dont la rémunération de base se présente sous forme de commissions, de salaire à la pièce, d'indemnités de trajet, etc.

d) Non-teaching Staff

All employees other than teachers and academic staff, i.e. president, vice-president, librarian, registrar, bursar, accountant, guidance counsellor, laboratory technician, personnel officer, and other services (e.g. janitor, caretaker, bus driver, etc.)

e) Teaching Staff

Those classified as teachers, instructors or academics in the payroll records (e.g. principal, professor, dean, head of department, master, teacher, etc.) whether they teach during the day or evening. Supply or substitute teachers are excluded.

f) Supply or Substitute Teachers

Teachers who are called in to teach whenever their services are needed either to augment the existing staff or as a short-term replacement for a full-time or part-time teacher.

3. Earnings

Earnings represent gross pay before deductions for taxes, unemployment insurance contributions, etc.

The payroll concept does not include supplementary labour costs such as employer's contributions to unemployment insurance, medical plans, Workmen's Compensation and other welfare plans, nor does it include the cost of equipment, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, bonuses paid at irregular and infrequent intervals or director's fees.

a) Gross Pay

Gross pay includes salaries, straight-time wages, piece-work and regular commission earnings, regular paid incentive, cost of living and other bonuses, overtime earnings and payments to persons absent with pay in the survey reference week.

b) Overtime Pay

All pay received for the number of hours worked in excess of the standard workday or workweek.

4. Hours

a) Total hours paid

All hours worked, including overtime hours, plus hours of paid absence (e.g. holidays, vacation, sick leave, jury duty, etc.)

b) Overtime Hour

The total hours for which overtime was paid. These represent the hours worked.

5. Paid Absence

Paid absence comprises paid holidays, vacation, sick leave including industrial injury and personal leave such as bereavement leave, jury duty, etc.

6. Standard Workweek

The hours in the standard workweek constitute the average number of hours of work normally scheduled in a workweek.

d) Personnel non enseignant

Tous les salariés autres que le personnel enseignant, c'est-à-dire le président, le vice-président, le bibliothécaire, le secrétaire général, l'économe, le comptable, les orienteurs, les techniciens de laboratoire, les agents du personnel, le concierge, les chauffeurs d'autobus, etc.

e) Personnel enseignant

Tout travailleur classé comme enseignant ou chargé de cours dans les dossiers du service de la paye (directeur, professeurs, doyens, chefs de département, maîtres, enseignants, etc.), qu'il enseigne le jour ou le soir. Les suppléants ou remplaçants sont exclus.

f) Suppléants ou remplaçants

Enseignants appelés à se présenter au travail lorsqu'on a besoin de leurs services soit pour accroître le personnel existant, soit pour remplacer pendant une courte période un enseignant à temps plein ou à temps partiel.

3. Gains

Les gains représentent la rémunération brute avant toutes déductions d'impôt, de cotisations d'assurance-chômage, etc.

Le concept de rémunération ne comprend pas les frais supplémentaires de main-d'oeuvre tels que les contributions de l'employeur à la caisse d'assurance-chômage, aux régimes d'assurance-maladie, à la caisse d'indemnisation des accidents du travail et à d'autres régimes de prévoyance; il ne comprend pas non plus le coût du matériel, la valeur du couvert et du gîte, les paiements en nature, les frais de déplacement, les indemnités de retraite, les gratifications versées à intervalles irréguliers et peu fréquents, ni les jetons de présence des administrateurs.

a) Rémunération brute

Comprend les salaires, les traitements à taux ordinaires, la rémunération du travail à la pièce et les commissions régulières, ainsi que les primes, indemnités de vie chère et autres gratifications versées régulièrement, les payes de surtemps et la rémunération des absences payées dans la semaine de référence de l'enquête.

b) Rémunération du temps supplémentaire

Ensemble de la rémunération versée pour le nombre d'heures de travail effectuées en sus de la journée ou de la semaine normale de travail.

4. Heures

a) Nombre total d'heures payées

Ensemble des heures travaillées, y compris les heures supplémentaires, plus les heures de congé (par ex., les jours fériés, les vacances, les congés de maladie, les congés pour service judiciaire, etc.)

b) Heures supplémentaires

Total des heures payées à un taux majoré; il s'agit d'heures réellement travaillées.

5. Absence payée

Les absences payées comprennent toutes les heures rémunérées dans le cas des jours fériés payés, des vacances, des congés de maladie, ainsi que des congés d'accident du travail et des congés pour motifs personnels tels que les congés de deuil et les congés pour service judiciaire.

6. Semaine normale de travail

Les heures d'une semaine normale de travail reflètent la moyenne des heures de travail normalement fixées pour une semaine.

7. Take-all and Take-some Units

Take-all units are reporting units of firms or organizations which are included in the survey sample with certainty every month. These include:

- a) All firms or organizations with 200 or more employees;
- b) Units of government departments and crown corporations;

Prior to the April 1988 reference month, the following were also included in the take-all:

- c) All firms with more than one reporting unit:
- Firms which report their survey data on computer listings rather than on standard guestionnaire;
- e) Units belonging to elementary and secondary schools:
- f) Certain other pre-specified units or firms.

Take-some units are all the other firms in the universe which have a known probability of selection.

Methodology

The statistics contained in this publication are based on information obtained through a sample survey of reporting units. The data is collected by means of questionnaires mailed monthly to a sample of about 70,000 reporting units selected out of a universe of about 700,000. The sample covers all industries in scope for the survey, all provinces and territories and all sizes of units. Both the universe and the sample are updated monthly for births and deaths.

Stratification

For the determination of the survey sample size and for the purpose of the sample selection, the universe of reporting units is stratified by 12 provinces and territories, 16 industry groups and 4 size groups. (An industry group is slightly more detailed than the 1-digit industry code). The size of a unit is defined to be the total number of paid employees in that unit. The four size groups are 0 to 19, 20 to 49, 50 to 199 and 200 or more employees.

The universe of reporting units is further stratified into take-all and take-some categories as defined earlier under Definitions.

Sample allocation and selection

The size of the take-some sample for the survey has been determined so as to provide estimates of total number of paid employees at the industry group and province level with a prespecified reliability. The determination has been done under the requirement that the sample at the industry group and province level is allocated to each size group in proportion to the total estimated take-some employment in that size group. If the sampling fraction resulting from this allocation is less than .01, then a minimum sampling fraction of .01 is adopted in order to avoid unusually large weights. The allocation makes the probability of inclusion of a unit in the sample in a size stratum approximately proportional to the average number of employees per unit in that size stratum. The sample design, therefore, provides for a small sample of small reporting units if the concentration of employment is mainly in the large reporting units. On the other hand, if the proportion of total employment from small reporting units is substantial, then the sample will include a large number of small reporting units.

7. Unités à tirage complet et à tirage partiel

Les unités à tirage complet sont les unités déclarantes d'entreprises ou d'organisations incluses en permanence dans l'échantillon de l'enquête. Elles comprennent:

- a) toutes les entreprises de 200 salariés ou plus;
- b) unités des services gouvernementaux et des sociétés de la couronne:

Avant le mois de référence avril 1988, les suivantes étaient aussi incluses avec les unités à tirage complet:

- c) toutes les entreprises ayant plus d'une unité déclarante;
- d) les entreprises qui déclarent leurs données au moyen d'un imprimé d'ordinateur plutôt qu'à l'aide du guestionnaire;
- e) unités propres aux écoles primaires et secondaires;
- f) d'autres unités ou entreprises préalablement choisies.

Les unités à tirage partiel sont toutes les autres entreprises qui ont une probabilité connue d'être choisies dans l'échantillon de l'enquête.

Méthodologie

Les statistiques présentées dans cette publication se fondent sur les résultats d'une enquête effectuée par sondage auprès d'unités déclarantes. Les données sont recueillies au moyen d'un questionnaire posté tous les mois à un échantillon de quelque 70,000 unités déclarantes provenant d'un univers d'environ 700,000 unités. L'échantillon couvre toutes les activités économiques que vise l'enquête, ainsi que les toutes les provinces et les territoires et toutes les tailles d'unité. Chaque mois, nous mettons à jour l'univers ainsi que l'échantillon, en tenant compte des créations et des disparitions d'unités ou d'entreprises.

Stratification

Pour déterminer la taille et la composition de l'échantillon, nous répartissons l'univers des unités déclarantes en 12 provinces et territoires, 16 groupes industriels (activités économiques) et quatre groupes de taille. (Un groupe industriel est légerement plus détaillé qu'une industrie dont le code n'a qu'un chiffre). La taille d'une unité se définit comme étant le nombre total de salariés rémunérés que compte cette unité. Les quatre groupes de taille sont 0 à 19, 20 à 49, 50 à 199 et 200 salariés et plus.

En outre, l'univers des unités déclarantes est stratifié en deux catégories: les unités à **tirage complet** et les unités à **tirage partiel**, au sens que nous avons précisé dans la section "Définitions".

Répartition et choix de l'échantillon

La taille de la portion à tirage partiel de l'échantillon a été déterminée de facon à fournir, avec une fiabilité prédéterminée, des estimations du nombre total de salariés rémunéres, au niveau du groupe industriel et de la province. Ce calcul fient compte du fait que l'échantillon, au niveau du groupe industriel et de la province, doit être réparti dans chaque groupe de taille proportionellement à l'estimation de l'emploi total au sein de la portion à tirage partiel de chacun des groupes de taille. Si la fraction d'échantillon résultant de cette répartition est inférieure à 0.01, on la remplace alors par la fraction minimale 0.01 afin d'éviter toute pondération excessive. La répartition est telle que la probabilité qu'une unité entre dans une strate particulière de l'échantillon est à peu près proportionnelle au nombre moyen de salariés par unité comprise dans cette strate. Le pian d'échantillonnage prévoit donc un petit échantillon de petites unités déclarantes lorsque l'emploi se concentre principalement dans les grandes unités déclarantes. Par contre, si l'emploi total provenant des petites unités déclarantes est élevé, alors l'échantillon contiendra un grand nombre de petites unités déclarantes.

The number of reporting units to be selected at the industry group, province and size levels is again allocated to each three-digit industry within that industry group, province and size in proportion to the total number of reporting units in that three-digit industry. In other words, the sampling fraction used at the three-digit industry level is the same as the one determined at the industry group, province and size. However, it should be noted that a minimum sample of three units is selected whenever the use of the sampling fraction results in less than 3 units. If the universe itself is less than three units, then all the units are taken into the sample. Note that beginning with the January 1986 reference month, the sampling fractions for size group three (50 to 199 employees) in all manufacturing industries were changed to one.

A systematic sample of the predetermined number of units is drawn from the take-some universe in every three-digit industry, province and size group. The total sample is the sum of the number of take-all and selected take-some units.

Sample rotation

The design provides for rotation of the take-some sample within a three-digit industry, province and size group. Each month, approximately one-twelfth of the take-some sample is replaced. This means that units generally remain in the sample for 12 months before rotating out. The units are not eligible for reselection for at least 12 months after they rotate out.

In some small three-digit industry, province and size group cells it may not be possible to rotate out units each month. Consequently, in some small cells, units may have to stay longer than 12 months. Note that beginning with the reference month of January 1986, there is no rotation of units with 50 to 199 employees in the manufacturing industries.

Data edit and correction

All the questionnaires are initially screened for completeness by the interviewers of the Statistics Canada regional offices. Thereafter, extensive computer edit procedures for accuracy and consistency are performed at the Ottawa head office. As a result of any of the above-mentioned editing techniques, the respondent may be contacted to confirm or explain the data.

The edit procedures include the comparison of the values of key characteristics (e.g. number of employees, hours worked, salary per employee, etc.) reported for consecutive months by the same unit in order to detect large changes or errors in reporting. Whenever there is a large change or the data appears inconsistent, the record is signaled by the computer edit for review and is subject to correction or acceptance as appropriate.

Follow-up

Reporting units which are non-respondents to the initial mailing are followed up by telephone by the staff of the regional offices of Statistics Canada. Priority for this follow-up is given to (i) units which are in the sample for the first time and which have not responded, (ii) units which have not responded for two consecutive months, (iii) large non-respondent units. Follow-up also takes into account response rates and employment in the various industry groups in determining priority.

If units continue to be non-respondents even after follow-up, then data will be imputed for these units. All the records with imputed values are subject to the edits mentioned above.

Le nombre d'unités qu'il faut choisir au niveau du groupe industriel, de la province et de la taille est, en outre, réparti entre chacune des industries ayant un code à trois chiffres, lesquelles font partie du groupe industriel, de la province et de la taille considérés; cette répartition se fait proportionnellement au nombre total d'unités déclarantes comprises dans l'industrie dont le code comporte trois chiffres. En d'autres termes, la fraction d'échantillon utilisée au niveau industriel à trois chiffres est la même que celle déterminée pour le groupe industriel, la province et la taille. Il faut cependant noter que l'échantillon minimal est de trois unités, peu importe le résultat obtenu en utilisant la fraction d'échantillon. S'il y a moins de trois unités dans l'univers, toutes les unités disponibles sont incluses dans l'échantillon. Notons qu'à partir du mois de référence de janvier 1986, la fraction d'échantillon associée aux unités du groupe de la taille trois (de 50 à 199 salariés) des industries manufacturières est

Au sein de la portion à tirage partiel, on choisit un échantillon systématique d'un nombre prédéterminé d'unités dans chaque industrie ayant un code à trois chiffres, et ce dans chaque province et chaque groupe de taille. L'échantillon total résulte de la somme du nombre d'unités à tirage complet et du nombre d'unités à tirage partiel sélectionnées.

Rotation de l'échantillon

Pour chaque industrie (code à trois chiffres), province et groupe de taille, le plan prévoit une rotation de la portion à tirage partiel de l'échantillon. Chaque mois, le douzième environ de la portion à tirage partiel de l'échantillon est remplacé. Cela signifie qu'en général les unités demeurent 12 mois dans l'échantillon avant d'en sortir par voie de rotation. Les unités ne peuvent pas être choisies de nouveau avant au moins 12 mois suivant leur mois de sortie.

Dans le cas de certaines petites cellules (une cellule regroupe les unités de même industrie au niveau du code à trois chiffres, même province et même groupe de taille), il est parfois impossible d'assurer la rotation des unités chaque mois. Ainsi, il peut arriver que des unités demeurent plus de douze mois dans certaines petites cellules. Notez qu'à partir du mois de référence de janvier 1986, dans les industries manufacturières il n'y a aucune rotation des unités ayant de 50 à 199 salariés.

Vérification des données et correction

Au départ, les interviewers des bureaux régionaux de Statistique Canada s'assurent que tous les questionnaires sont complets. Ultérieurement, le personnel du bureau d'Ottawa vérifie par ordinateur l'exactitude et la cohérence des chiffres déclarés. À chacune de ces deux étapes de vérification, un répondant peut donc être prié de confirmer ou d'expliquer ses chiffres.

Nos procédés de vérification nous permettent de comparer les valeurs de certaines caractéristiques (nombre de salariés, heures de travail, gains par salarié, etc.) déclarées par la même unité plusieurs mois de suite. Ainsi, il est possible de déceler les grandes variations ou les erreurs, s'il en est. Chaque fois qu'une forte variation apparaît ou que les données sémblent incohérentes, l'ordinateur signale le cas, et l'enregistrement est aussitôt corrigé s'il comporte effectivement une erreur.

Méthode de suivi

Le personnel des bureaux régionaux de Statistique Canada relance par téléphone les unités déclarantes qui tardent à répondre au 'questionnaire. Cette méthode de suivi s'adresse en priorité (i) aux unités qui font partie de l'échantillon pour la première fois et qui n'ont pas encore répondu; (ii) aux unités qui accusent un retard de deux mois consécutifs; (iii) aux grandes unités non répondantes. Pour déterminer l'ordre de priorité des suivis, on tient compte des taux de réponse et du volume de l'emploi dans les différents groupes industriels.

Lorsque des unités persistent à ne pas répondre même après le suivi, des données leurs sont imputées. Tous les enregistrements dont les données découlent d'une imputation sont soumis aux vérifications mentionnées ci-dessus.

Imputation

Imputation for non-respondent units which have been in the survey for more than one month is based on the ratio of the monthly changes. The ratio of the monthly change for each characteristic is calculated from units that responded both in the current and the previous month and is applied to the previous month's data of each non-respondent.

For the non-responding units that are new to the survey, imputation is based on other sources of information such as the employment intention of the unit, the characteristics of the responding units in the same industry group, province and size.

Estimates

The basic "building block" for producing the monthly estimates is the three-digit industry, province and size group. Estimates at higher levels are obtained by the aggregation of the above estimates. Estimates of averages are obtained by first estimating the totals for the numerator and the denominator at the desired level and then calculating the ratio. Estimates for certain sub-provincial areas are also produced, treating the sub-province as a domain. Coefficients of variation for estimates of some key characteristics at all levels are also produced.

Provision has also been made in the estimation procedure to change the weights of "unusually large" observations occurring in size groups 1, 2 and 3. These observations are termed "outliers" and are judged not to be representative of other units in that size group. The weights of the remaining units are adjusted accordingly.

Reliability of the estimates

There are two types of errors possible in estimates based on a sample survey: sampling and non-sampling.

Sampling errors occur because observations are made only on a sample rather than on the entire universe. Estimates based on a sample differ from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, interviewers and processing techniques. This difference with respect to a particular estimate is called the sampling error of the estimate.

Non-sampling errors are errors which are not related to sampling and may occur in a survey operation for many reasons. Non-response, coverage and classification errors, differences in the interpretation of the questions, incorrect information from respondents, mistakes in recording, coding and processing of data are examples of non-sampling errors. It should be noted that non-sampling errors also occur in complete censuses. In the Survey of Employment, Payrolls and Hours, efforts to reduce non-sampling errors include careful design of questionnaires, editing of data, follow-up of and imputation for non-respondents and thorough control of processing operations.

Indicators of sampling error

The sampling error, as described above, is not known. However, it can be estimated from the sample itself by using a statistical measure called the **standard error** of a survey estimate. When the standard error is expressed as a percent of the estimate, it is known as the relative standard error or **coefficient of variation**. Tables of indicators of the coefficients of variation are included in the complete set of Concepts and Methods available from the Labour Division along with an explanatory note on how to use them to judge the quality of the estimates contained in this publication.

Imputation

L'imputation de données aux unités non répondantes comprises dans le champ de l'enquête depuis plus d'un mois est basée sur le ratio des variations mensuelles de ces unités. Le ratio de la variation mensuelle d'une caractéristique se calcule à partir des unités qui ont répondu pour le mois courant et le mois précédent, et s'applique aux données du mois précédent de chaque unité non répondante.

Dans le cas des unités non répondantes qui figurent dans l'enquête pour la première fois, l'imputation se fonde sur d'autres sources d'information telles que les prévisions d'emploi de l'unité et les caractéristiques des unités déclarantes du même groupe industriel, de la même province et de la même taille.

Estimations

L'élément de base qui sert à établir les estimations est l'industrie (code à trois chiffres), la province et la taille. Les estimations plus agrégatives sont obtenues par la sommation des estimations susdites. Pour calculer les moyennes, on estime d'abord les totaux du numérateur et ceux du dénominateur, au niveau désiré, puis on en fixe le ratio. Nous produisons aussi des estimations concernant certaines régions infraprovinciales, considérant chacune de ces régions comme un domaine. Enfin, nous calculons des coefficients de variation pour les estimations de certaines caractéristiques clés, à tous les niveaux.

Le procédé d'estimation comporte en outre des mécanismes qui permettent de changer les poids lorsque des observations "exceptionnellement grandes" apparaissent chez les unités des groupes de taille 1, 2 ou 3. Ces observations, dites "aberrantes", ne sont pas représentatives des autres unités du même groupe de taille, de sorte que l'on rajuste les poids des autres unités en conséquence.

Fiabilité des estimations

En ce qui concerne les estimations basées sur un sondage, il existe deux types d'erreurs possibles, soit les erreurs d'échantillonnage et les erreurs non liées à l'échantillonnage.

Les erreurs d'échantillonnage proviennent de ce que les observations se font à partir d'un échantillon au lieu de l'univers complet. Les estimations basées sur un échantillon diffèrent des statistiques que l'on obtiendrait d'un recensement complet effectué au moyen des mêmes questionnaires, des mêmes directives, des mêmes interviewers et des mêmes techniques de traitement. Cette différence, lorsqu'il s'agit d'une estimation particulière, s'appelle erreur d'échantillonnage de l'estimation.

Les erreurs non dues à l'échantillonnage ne se rattachent pas à l'échantillon et peuvent se produire tout au long d'une enquête pour plusieurs raisons. Les cas de non-réponse, les anomalies de couverture et de classification, les différences d'interprétation des questions, la communication de renseignements inexacts par les répondants et les fautes d'entrée, de codage et de traitement des données sont autant d'erreurs non attribuables à l'échantillonnage, Il faut noter que des erreurs de ce genre peuvent aussi se produire dans les recensements. Pour l'enquête sur l'emploi, la rémuneration et les heures de travail, nous avons tenté d'en réduire le risque par une formulation soignée des questionnaires, par une vérification rigoureuse des chiffres déclarés, par le travail de suivi, par l'imputation de données aux unités non répondantes et par un contrôle attentif des techniques de traitement.

Indicateurs des erreurs d'échantillonnage

L'erreur d'échantillonnage que nous venons de décrire reste inconnue. On peut cependant l'estimer à partir de l'échantillon, en utilisant une mesure appelée écart-type d'une estimation de sondage. Lorsque l'écart-type est exprimé en pource tage de l'estimation, on l'appelle écart-type relatif ou coefficient de variation. Des tableaux d'indicateurs de coefficient de variation sont compris dans la version complète des concepts et méthodes disponible de la Division du travail ainsi q'une note explicative sur la qualité des estimations comprises dans cette publication.

Statistical Presentation

1. Data Revision

Each month, statistics for the two latest months are prepared from the survey of Employment, Payrolls and Hours. Data for the most current month are titled **preliminary** estimates and are based on a response rate of around 80%. Estimates are also prepared for the month immediately preceding the most current month; these are known as **revised** estimates and are based on a higher rate of response (approximately 90%).

2. Data Release

As soon as the estimates become available, selected highly aggregated statistics are released in the Statistics Canada Daily, while detailed data are entered in the Canadian Socio-Economic Information Management System (i.e. CANSIM).

Detailed estimates appear in this report at a later date.

3. Rounding

Totals and averages for any level of geographical or industrial aggregation are calculated using unrounded figures and then rounded using the usual procedure adopted by Statistics Canada. Published employment figures are rounded to hundreds. The sum of individually rounded items may not always equal the total.

4. Averages

The average weekly earnings (including overtime) is obtained by dividing the total weekly payrolls by the number of employees. It is calculated for the total number of employees, for the hourly-rated employees, for the salaried employees, and for the other types of employees.

The average weekly overtime earnings is derived by dividing the overtime weekly payrolls by the number of employees. It is calculated for the total number of employees, the hourly-rated employees and the salaried employees.

The average hourly earnings (including overtime) is obtained by dividing the total weekly payrolls by the total weekly number of hours (the total weekly number of hours is reported for the hourly-rated employees while, for salaried employees, it is derived by multiplying the average standard workweek hours by the number of salaried employees). It is calculated for the hourly-rated employees and for the salaried employees.

The average hourly overtime earnings is calculated for the hourly-rated employees by dividing the overtime weekly payrolls by the weekly number of overtime hours reported for this group of employees.

The average weekly hours (including overtime) is obtained by dividing the total weekly number of hours by the number of employees. This statistic is calculated for the hourly-rated employees and the salaried employees.

The average weekly overtime hours is derived by dividing the weekly number of overtime hours by the number of employees. This average is calculated for the hourly-rated employees.

Présentation statistique

1. Révision des données

Chaque mois, nous préparons, à l'égard des deux derniers mois, des statistiques tirées de l'enquête sur l'emploi, la rémunération et les heures de travail. Les données du mois le plus récent sont appelées estimations **préliminaires** et se fondent sur un taux de réponse d'environ 80%. Nous établissons également des estimations pour le mois qui précède le mois le plus récent; il s'agit d'estimations révisées qui prennent appui sur un taux de réponse plus élevé (environ 90%).

2. Diffusion des données

Dès que les estimations requises sont disponibles, des statistiques choisies à un niveau d'agrégation élevé paraissent dans le Quotidien de Statistique Canada, tandis que les chiffres détaillés sont introduits dans le Système canadien d'information socio-économique (CANSIM).

Les estimations détaillées apparaissent dans ce bulletin plus tard.

3. Arrondissement

Les totaux et les moyennes des divers niveaux d'agrégation géographique ou industrielle sont calculés au moyen des chiffres bruts, ensuite arrondis conformément à la méthode d'arrondissement habituelle de Statistique Canada. Les nombres publiés concernant l'emploi sont arrondis à la centaine. Par conséquent, il peut arriver que la somme des chiffres arrondis individuellement ne corresponde pas au total.

4. Moyennes

On obtient les rémunérations hebdomadaires moyennes (y compris celles du temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure, d'employés et des autres catégories de salariés.

Pour obtenir les rémunérations hebdomadaires moyennes du temps supplémentaire, on divise les rémunérations hebdomadaires pour le temps supplémentaire par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure et d'employés.

On obtient les gains horaires moyens (y compris la rémunération pour le temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre total hebdomadaire d'heures travaillées (le nombre total d'heures hebdomadaires est celui déclaré pour les salariés rémunérés à l'heure, tandis que dans le cas des employés on l'établit en multipliant la moyenne des heures fournies pendant la semaine normale de travail par le nombre d'employés). Nous calculons cette statistique à l'égard des salariés rémunérés à l'heure et des employés.

Quant au temps supplémentaire, on calcule les gains horaires moyens des salariés rémunérés à l'heure en divisant les rémunérations hebdomadaires pour le temps supplémentaire par le nombre d'heures supplémentaires hebdomadaires déclarées pour ce groupe de salariés.

Pour déterminer les heures hebdomadaires moyennes (y compris les heures supplémentaires) on divise le total des heures hebdomadaires par le nombre de salariés. Cette statistique est établie à l'égard des salariés rémunérés à l'heure ainsi qu'à l'égard des employés.

Pour calculer les heures supplémentaires moyennes hebdomadaires on divise le nombre d'heures supplémentaires hebdomadaires par le nombre de salariés.

The average weekly earnings (excluding overtime) is obtained by dividing the weekly payrolls, which exclude the overtime weekly payrolls, by the number of employees. This estimate is calculated for hourly-rated employees and salaried employees.

5. Unpublished Data

A large number of non-confidential detailed industrial and geographic estimates are compiled but not included in this report. Although the reliability of these estimates may be lower than the reliability of the published estimates, these data will be available on request on a cost recovery basis.

In addition to the total number of employees for the education industry, data are also available for the teaching and non-teaching staff separately.

6. Annual Averages

Annual averages of employment, earnings and hours data for the years 1983-1987 are available. The summary reports or user-specified tabulations can be ordered, on a cost recovery basis, from the Labour Division.

7. CANSIM

Some of the data published in this report are also avaible in machine readable form through CANSIM (Canadian Socio-Economic Information Management System).

Tables giving the Cansim matrices and series numbers and the types of survey estimates which provides the user with an easy and quick link to Cansim system are available from the Labour Division at (613)951-4090. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Bldg., Ottawa, Ontario, K1A 0T6.

8. Confidentiality

The information presented in this publication has been reviewed to ensure that the confidentiality of individual responses is respected.

La moyenne des rémunérations hebdomadaires (temps supplémentaire exclu) s'obtient en divisant les rémunérations hebdomadaires, qui excluent les rémunérations hebdomadaires pour le temps supplémentaire, par le nombre de salariés. Cette estimation est calculée à l'égard des salariés rémunérés à l'heure, de même qu'à l'égard des employés.

5. Données non publiées

Nous établissons, aux niveaux industriel et géographique, un grand nombre d'estimations non confidentielles détaillées qui, toutefois, ne figurent pas dans le présent ouvrage. Bien que leur fiabilité puisse être plus faible que celle des estimations publiées, ces données peuvent être obtenues sur demande sur une base de recouvrement des coûts.

Outre le chiffre total des salariés du domaine de l'éducation, nous pouvons aussi fournir des données distinctes concernant le personnel enseignant et le personnel non enseignant.

6. Movennes annuelles

Les moyennes annuelles pour l'emploi, la rémunération et les heures de travail sont disponibles pour les années 1983-1987. Ces rapports sommaires ou des tolalisations spéciales sont diponibles, moyennant le recouvrement des coûts, de la Division du travail.

7. CANSIM

Certaines données qui apparaissent dans la pésente publication sont également disponibles sous une forme ordinolingue dans CANSIM (Système canadien d'information socio-économique).

Des tableaux indiquant le numéro de matrices et les numéro de séries de Cansim ainsi que les types d'estimations de l'enquête, lesquels fournissent à l'utilisateur un moyen d'accès facile et rapide au système Cansim, sont disponibles auprès de la Division du travail au (613)951-4090. Pour de plus amples informations concernant CANSIM téléphoner à (613) 951-8200 ou écrire à Division de la diffusion informatique des données, Statistique Canada, immeuble R.H. Coats, Ottawa, Ontario, K1A OTT6.

8. Confidentialité

Les données du présent bulletin sont vérifiées afin de s'assurer qu'elles respectent le caractère confidentiel des réponses fournies par les entreprises.

NOTES TO USERS

I. UPCOMING CHANGES TO SURVEY (1989)

Several important changes to the Employment, Earnings and Hours program are being planned for 1989. These changes are intended to improve the usefulness and accuracy of the information we provide to our users.

The major changes are:

- New Standard Industrial Classification (SIC): The 1980 version of the SIC will replace the 1970 version now in use:
- Publication Re-design: the Employment, Earnings and Hours publication (catalogue 72-002) is being completely redesigned and will contain only two-digit level and higher industry detail rather than the three-digit level detail it currently provides;
- Publication Price Reduction: Expected cost reductions through the publication re-design will result in a reduced publication price;
- Special products: Custom-tailored reports or more detailed data (eg. 3 digit industry or sub-provincial detail) than that contained in the publication will be provided faster and more economically;
- Conversion to a new survey sampling frame data base to improve coverage and data quality;
- Historical Data: Data will be revised on a consistent basis back to 1983 on the 1980 SIC version to provide better level and trend estimates.

More information on these upcoming changes will be announced in future publications.

II. CHANGES TO SURVEY (1983-1988)

Data revisions - September 1988

There has been a revision to the data published for the month of September 1988 in certain industries for Manitoba and Canada. All variables (number of employees and average weekly earnings) may be affected by the revisions.

For more information see the errata in the December 1988 issue.

New Take-all Definition

A change in the definition of Take-all units was introduced with the release of the April 1988 estimates of Employment, Earnings and Hours.

AVIS AUX UTILISATEURS

I. CHANGEMENTS PROCHAINS À L'ENQUÊTE (1989)

La Division du travail prépare pour l'année 1989, plusieurs changements importants à son programme sur l'Emploi, les gains et la durée du travail. Ces changements ont pour but d'améliorer l'utilité et la précision des renseignements fournis aux utilisateurs.

Les principales modifications sont:

- une nouvelle classification type des industries (CTI): la version 1980 de la CTI remplacera la version 1970 présentement utilisée:
- nouvelle conception de la publication: la publication Emploi, gains et durée du travail (72-002 au catalogue) sera transformée et contiendra seulement des détails aux niveau des codes industriels à 2 chiffres ou des agrégations plus élevées (1 chiffre ou agrégations spéciales) plutôt que le détail au niveau du code à 3 chiffres présentement disponibles;
- réduction dans le prix de la publication: il est anticipé qu'une réduction des coûts de production de la publication suite aux modifications apportées, résultera en une diminution du prix;
- produits spéciaux: des totalisations propres aux besoins des utilisateurs ou des totalisations contenant plus de détails (codes à 3 chiffres ou données sous-provinciales) que la publication, seront disponibles de façon plus rapide et économique;
- conversion à une nouvelle base de sondage afin d'améliorer la couverture et la qualité des données:
- données historiques: les données seront révisées à partir de 1983, sur la base de la CTI 1980 pour permettre de meilleurs estimés du niveau et de la tendance.

Plus d'informations sur ces changements vous seront communiquées dans les prochains numéros de cette publication.

II. CHANGEMENTS À L'ENQUÊTE (1983-1988)

• Révisions aux données - Septembre 1988

Des révisions ont été apportées aux chiffres publiés pour le mois de septembre 1988 dans certaines industries pour le Manitoba et le Canada. Toutes les variables (emploi et rémunération hebdomadaire moyenne) peuvent être affectées par les révisions.

Pour de plus amples renseignements voir l'errata dans le numéro de décembre 1988.

Nouvelle définition des unités à tirage complet

Une modification a été apportée à la définition des unités à tirage complet à partir d'avril 1988 concernant l'emploi, les gains et la durée du travail.

Firms with more than one reporting unit but less than 200 employees will no longer be surveyed as part of the Take-all group. Although these firms represent a large number of reporting units they account for a small percentage of total employment. The change was made to reduce the cost of the Survey of Employment, Payrolls and Hours, to reduce respondent burden and, ultimately, to produce a more useful and consistent data series representing all firms with 200 or more employees.

Because the immediate introduction of the new definition would result in breaks in the Take-all and All units series, measures are being taken to maintain the continuity of the existing series. A complete revision will be undertaken in 1989 (see Upcoming Changes to Survey). From April 1988 onward, the month-to-month movements of the Take-all series will be based on data trends of firms with more than 200 employees.

• Data Revisions - January to April 1987

Changes to the survey of Employment, Payrolls and Hours (SEPH) sampling frame were phased-in over a four-month period beginning with January 1987. Major changes included improvements to the coverage of firms in the survey sampling frame and a re-assignment of some establishments to more appropriate industry, geographic and / or employment size categories. Revised sampling fractions were also implemented in a number of areas to improve the efficiency of the sample. These changes were designed to improve the accuracy and reliability of the estimates. The phase-in over the four months, however, affected the month-to-month comparability of the published estimates over this period.

Data for the months of January, February and March 1987 were revised from the originally published information to remove the impact of the phase-in and to provide data for the first four months of 1987 on a consistent basis. The revised data were published in the May 1987 issue of this catalogue.

Adjustments to SEPH data for the period 1983-1986 are required when making comparisons with the 1987 estimates and later estimates. Adjustment factors needed to make such comparisons and explanations on their use were published in the May 1987 issue. The factors are also available on request from the Labour Division.

Sample Size Increase in Manufacturing Industries

The sample size of the Survey of Employment, Payrolls and Hours was increased by 2,000 establishments in the manufacturing industry in order to improve the quality of the estimates at the detailed industry level. Commencing with the data for January, 1986, all manufacturing firms with 50 to 199 employees were included in the sample with

Les entreprises ayant plus d'une unité déclarante mais moins de 200 salariés ne font plus partie, aux fins de l'enquête, du groupe d'unités à tirage complet. Ces entreprises représentent une grande proportion des unités déclarantes mais un faible pourcentage du total de l'emploi. Le but de cette modification est de réduire le coût de l'enquête sur l'emploi, la rémunération et les heures de travail, de réduire le fardeau de réponse et de produire finalement une série de données plus utiles et cohérentes à l'égard des entreprises ayant 200 salariés ou plus.

Comme l'introduction immédiate de la nouvelle définition entraînerait une discontinuité dans les séries concernant les unités à tirage complet et l'ensemble des unités, on a pris des mesures pour maintenir la continuité des séries actuelles. Une révision complète sera exécutée en 1989 (voir les changements prochains à l'enquête). À partir d'avril 1988, les variations mensuelles de la série des unités à tirage complet seront fondées sur les tendances des entreprises ayant plus de 200 salariés.

• Révisions aux données - Janvier à avril 1987

Les modifications apportées à la base de sondage de l'enquête sur l'emploi, la rémunération et les heures de travail (EERH) ont été incorporées au cours d'une période de quatre mois à compter du mois de référence de janvier 1987. Les principales modifications comprennent des améliorations au champ d'observation des entreprises dans la base de sondage de l'enquête, la réaffectation de certains établissement et de la taille de l'emploi et des révisions aux fractions de sondage dans un certain nombre de domaines. Ces modifications sont destinées à améliorer la précision et la fiabilité des estimations. La mise en oeuvre des modifications au cours de ces quatre mois a cependant affecté la comparabilité d'un mois à l'autre des estimations publiées pendant cette période.

Les données pour janvier, février et mars 1987 ont été révisées par rapport aux estimations déjà publiées afin d'éliminer les conséquences de la mise en oeuvre des modifications et de présenter des données pour les quatre premiers mois de 1987 sur une base cohérente. Ces données révisées ont été publiées dans le numéro de mai 1987.

Il faut corriger les données de l'EERH pour la période 1983 à 1986 lorsque l'on procède à des comparaisons avec les estimations de l'année 1987 ou des années subséquentes. Les facteurs d'ajustement nécessaires pour effectuer ces comparaisons et les explications pour leur emploi ont été publiés dans le numéro de mai 1987. Les facteurs sont aussi disponibles sur demande auprès de la Division du travail.

Augmentation de la taille de l'échantillon dans les industries manufacturières

Dans le but d'améliorer la qualité des séries publiées par l'enquête sur l'emploi, la rémunération et les heures de travail sur les industries manufacturières, 2,000 entreprises ont été ajoutées à l'échantillon de ce secteur. À partir du mois de référence de janvier 1986, toutes les entreprises manufacturières ayant 50 à 199 salariés sont incluses dans l'échantillon. Auparavant, seul un échantillon de ces

certainty. These firms had previously been surveyed on a sample basis. Estimates originally published for January and February, 1986, did not include these additional units so that the impact on the manufacturing data and the Industrial Aggregate could be assessed prior to publication. Data for January and February, revised to reflect this change, were first presented in the March 1986 issue of this publication.

Industrial Composite

Note that the publication of the Estimates of Average Weekly Earnings for "Industrial Composite" was terminated with the December 1985 estimates.

Revisions to Historical Data (1984)

There has been a revision to the data published monthly in the January to July 1984 issues of Catalogue 72-002 for certain industries. The revised series appear in the September 1984 issue. All data variables at the Canada, Provinces and Territories level may be affected.

III. NOTE ON SUB-PROVINCIAL DATA

DATA AVAILABILITY

Effective with June 1985, data on urban areas were removed from Catalogue 72-002, Employment, Earnings and Hours due to:

- limitations regarding data reliability
 - increasing cost of producing the publication

SOURCES OF ACCESS TO THESE DATA

- a) Annual Averages and Monthly Estimates Report (1987) / Annual Averages and Time Series Report (1983 to 1986)
- data available for:

Employment, Earnings and Hours for total manufacturing and industrial aggregate for the 25 Census Metropolitan Areas in Canada. Also included for Canada and provinces are major variables and industries.

Price: \$50.00 hard copy \$75.00 diskettes

available from:

Dissemination Section, Labour Division, Statistics Canada, Ottawa (613) 951-4090 and, Regional Reference Centres of Statistics Canada (Refer to the telephone numbers listed on the reverse of the front page of this catalogue).

entreprises était enquêté. Les chiffres originalement publiés pour les mois de janvier et de février 1986 n'incluaient pas ces unités additionnelles. Le but de ce délai était de déterminer l'impact sur les estimations des industries manufacturières et de l'ensemble des activités économiques. Il est important de noter que les chiffres de janvier et février, révisés pour refléter le changement, ont été publiés dans le numéro de mars 1986 de ce catalogue.

Ensemble des industries

Veuillez noter que les Estimations de la rémunération hebdomadaire moyenne pour "l'ensemble des industries" ont cessé d'être publiées avec les estimations révisées de décembre, 1985.

Révisions aux données historiques (1984)

Des révisions ont été apportées aux chiffres publiés dans le catalogue mensuel numéro 72-002 pour les mois de janvier à juillet 1984, pour certaines industries. Les séries révisées figurent dans le catalogue du mois de septembre 1984. Toutes les variables aux niveaux du Canada, provinces et territoires peuvent être affectées.

III. NOTE SUR LES ESTIMATIONS INFRA-PROVINCIALES

DISPONIBILITÉ DES ESTIMATIONS

Depuis juin 1985, les estimations pour les régions urbaines ne paraissent plus dans le n° 72-002 au catalogue, Emploi, gains et durée du travail. Ces estimations ont été suprimées de la publication pour les raisons suivantes:

- limites associées à la fiabilité des données
- augmentation des coûts de production de la publication

SOURCES D'ACCÈS AUX ESTIMATIONS

- a) Rapport des moyennes annuelles et des estimations mensuelles (1987) / Rapport des moyennes annuelles et des séries chronologiques (1983 à 1986)
- données disponibles pour:

Emploi, gains et durée du travail pour le total des industries manufacturières et l'ensemble des activités pour les 25 régions métropolitaines de recensement du Canada. Les principales variables des groupes industriels majeurs pour le Canada et les provinces sont également inclues.

Prix: \$50.00 pour l'imprimé \$75.00 pour les disquettes

• disponible auprès de:

Section de diffusion, Division du Travail, Statistique Canada, Ottawa (613) 951-4090 et, Centres régionaux de consultation de Statistique Canada (consulter les numéros de téléphone qui se trouvent au

verso du couvert de ce catalogue).

b) Data confirmation/special tabulations

data available for:

Employment, Earnings and Hours variables including their coefficients of variation, for all geographic levels and industrial activities. The release of these data are subject to confidentiality.

· available from:

Dissemination Section, Labour Division, Statistics Canada, Ottawa (613) 951-4090

c) CANSIM (Statistics Canada's computerized data bank)

• data available for:

Employment and earnings for all sub-provincial areas and for selected industrial detail.

available from:

Electronic Data Dissemination Division, Statistics Canada, Ottawa (613) 951-8200

LIMITATIONS ASSOCIATED WITH THE RELIABILITY OF SUB-PROVINCIAL DATA

a) Methodological constraints

The survey was not designed to produce reliable estimates at the sub-provincial level. Estimation of variables for the sub-provincial level is derived using the provincial weights. The survey methodology, therefore, does not guarantee that the sample in any one sub-provincial area will be representative of the population of that area. In addition, the sample in an area may change from one month to the next due to rotation of units into and out of the sample, which may cause a shift in the level of the estimate.

b) Changes to the sampling frame

In January 1987, changes were made to the SEPH sampling frame (see May 1987, publication 72-002 Employment, Earnings and Hours). These modifications caused a break in the series produced by the survey. Thus, it is not possible to compare data for 1987 and subsequent years to that of previous years. At present, adjustment factors are only available for Canada and provinces.

c) Introduction of the new take-all definition

Since April 1988, firms with more than one reporting unit but less than 200 employees, are no longer surveyed as part of the take-all group and therefore are not included with certainty each month in the survey. Although measures were taken to maintain the continuity of existing series at the national and provincial levels, impacts due to the introduction of the new take-all definition have not been assessed on sub-provincial data.

b) Confirmation des estimations/production de totalisations spéciales

données disponibles pour:

L'emploi, la rémunération et les heures de travail ainsi que leur coefficient de variation pour tous les niveaux géographiques et activités économiques. La diffusion de ces données est cependant restreinte par la confidentialité.

• disponible auprès de:

Section de diffusion, Division du travail, Statistique Canada, Ottawa (613) 951-4090

c) CANSIM (base de données informatisées de Statistique Canada)

• données disponibles pour:

Emploi et gains pour toutes les régions infra-provinciales et pour certaines activités économiques.

disponible auprès de:

Division de la diffusion informatique des données, Statistiques Canada, Ottawa (613) 951-8200

LIMITES ASSOCIÉES À LA FIABILITÉ DES ESTIMATIONS INFRA-PROVINCIALES

a) Contraintes méthodologiques

L'enquête n'a pas été conçue de façon à produire des estimations fiables pour les régions infra-provinciales. Ces estimations sont dérivées en utilisant la pondération assignée aux unités sélectionnées au niveau de la province. La méthodologie de l'enquête ne garantit donc pas que l'échantillon soit représentatif de la population au niveau infra-provincial. De plus, l'échantillon d'une région peut être modifié d'un mois à l'autre dû à la rotation d'unités qui entrent et sortent de l'enquête, ce qui peut causer un changement dans le niveau des estimations.

b) Changements effectués à la base de sondage

En janvier 1987, des changements effectués à la base de sondage de l'EERH ont entraîné une brisure dans les séries produites par l'enquête (voir catalogue 72-002 Emploi, gains et durée du travail, mai 1987). Ainsi, ori ne peut pas comparer les estimations de 1987 et années subséquentes avec celles des années antérieures car en ce moment les facteurs d'ajustement sont disponibles uniquement pour le Canada et les provinces.

c) Introduction de la nouvelle définition des unités à tirage complet

À compter d'avril 1988, les entreprises ayant plus d'une unité déclarante mais moins de 200 salariés ne font plus partie du groupe d'unités à tirage complet, c'est-à-dire qu'elles ne sont plus recensées de façon permanente dans l'enquête. Bien que des mesures aient été prises pour maintenir la continuité des séries actuelles pour le Canada et les provinces, l'impact causé par l'introduction de la nouvelle définition des unités à tirage complet n'a pas été évalué au niveau infra-provincial.

DATA QUALITY INDICATOR

Coefficient of Variation

The sample estimate and its coefficient of variation may be used to derive a standard error and to construct a confidence interval within which the unknown census value is expected to be contained (see note on coefficient of variation for its utilization). Although the coefficient of variation attached to the sub-provincial estimates gives some indication of the standard deviation of units in the sample, it does not measure the reliability of the level and the consistency of the estimate from one time period to another. High standard errors or coefficients of variation which change significantly from month to month indicate that the sample is changing and that the monthly movements should be interpreted with caution.

The user is encouraged to treat the sub-provincial data as a complimentary source of information to the more reliable SEPH estimates at higher levels of geographic and industrial aggregation.

Note: It must be noted that most of the products and services mentioned above are available on a cost-recovery basis. For additional information on any of the above issues, or on the use or application of data series, please contact Renée Arsenault of the Labour Division at (613)951-4090.

• INDICATEUR DE LA QUALITÉ DES ESTIMATIONS

Coefficient de variation

En utilisant l'estimation et le coefficient de variation, il est possible de dériver un écart-type et de construire un intervalle de confiance pour cerner la valeur inconnue qui aurait été produite par un recensement (voir note sur le coefficient de variation pour son utilisation). Le coefficient de variation rattaché aux estimations infra-provinciales fournit une indication de l'écart-type des unités dans l'échantillon sans toutefois mesurer la fiabilité du niveau et de la cohérence de ces estimés d'un mois à l'autre. Lorsque l'écart-type est élevé ou que le coefficient de variation varie beaucoup d'un mois à l'autre, ceci indique que l'échantillon est instable et que les variations mensuelles des estimations doivent être interprétées avec précaution.

L'utilisateur est encouragé à consulter les estimations infra-provinciales comme source d'information complémentaire à des estimations plus fiables produites par l'EERH, à des niveaux géographiques et économiques plus élevés.

Nota: Il est à noter que la plupart des services et produits ci-haut mentionnés sont disponibles sur une base de recouvrement des coûts. Pour de plus amples renseignements sur les sujets précités, ou sur l'utilisation et l'application de séries alternatives, communiquer avec Renée Arsenault de la Division du travail à (613)951-4090.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Employment, Earnings and Hours,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-4090) or to the Statistics Canada reference centre in:

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

Note on CANSIM

Some of the data published in Employment, Earnings and Hours (Catalogue 72-002) are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. Data for urban areas are also available on CANSIM. Users interested in accessing data via CANSIM should contact one of Statistics Canada's regional centres at the numbers listed on the inside front cover of this publication or contact CANSIM directly at (613)951-8200.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

Note concernant CANSIM

Quelques données publiées dans l'Emploi, gains et durée du travail (nº 72-002 au catalogue) peuvent être obtenues sous forme lisible par machine de CANSIM (Système Canadien d'information socio-économique). Les séries historiques sont généralement plus longues sur CANSIM. Les données pour les régions urbaines sont aussi disponibles sur CANSIM. Les utilisateurs voulant obtenir des chiffres par l'intermédiaire de CANSIM doivent contacter un des centres de consultation de Statistique Canada dont les numéros de téléphone se trouvent à l'endos du couvert de cette publication ou en communiquant directement avec CANSIM au (613)951-8200.

Highlights

(Preliminary Estimates¹ (Data not seasonally adjusted) – February 1989

Industrial Aggregate Summary

The preliminary estimate of average weekly earnings for all employees in the industrial aggregate² was \$474.44 for February, virtually unchanged from January. Average weekly earnings increased over February 1988 by 4.0%³ (\$18.25), compared to the annual average increase of 4.8% for 1988.

Canada industrial aggregate employment was estimated at 10,114,000 - an increase of 73,000 (+0.7%) from January. This contrasts with the decreases usually observed at this time of year. The employment increase of 321,000 (+3.3%) over February 1988 was the largest year-over-year percentage growth since December 1986.

Average Weekly Earnings

- Between January and February, average weekly earnings in forestry and in construction decreased at a time of year when increases are usually observed. Trade increased slightly when a decrease usually occurs.
- The year-over-year increase in earnings in community, business and personal services (+2.4%) was its lowest since August 1987.
- Between January and February, earnings in Newfoundland recorded a decrease instead of the usual increase.
- Nova Scotia had its lowest year-over-year increase in earnings since October 1987 (+2.8%). Alberta had its lowest increase since January 1988 (+1.7%).

Faits saillants

Estimations préliminaires¹ (Données non désaisonnalisées) ~ Février 1989

Sommaire pour l'ensemble des activités économiques

Selon les données préliminaires, en février 1989, la rémunération hebdomadaire moyenne pour l'ensemble des activités économiques² était estimée à \$474.44, virtuellement inchangée par rapport à janvier. Par rapport à février 1988, la rémunération était en hausse de 4.0%³ (\$18.25), comparativement à une augmentation moyenne annuelle de 4.8% en 1988.

Le nombre de salariés pour l'ensemble des activités économiques au Canada a atteint 10,114,000, en hausse de 73,000 (+0.7%) par rapport à janvier (données non désaisonnalisées). Cette augmentation contraste avec les diminutions observées dans les années passées. Par rapport à février 1988, le nombre de salariés a augmenté de 321,000 (+3.3%), sa plus forte croissance annuelle depuis décembre 1986.

Rémunération hebdomadaire movenne

- Entre janvier et février, la rémunération dans les forêts et dans la construction montrait des baisses plutôt que les augmentations habituelles. Le commerce augmentait légèrement plutôt que de diminuer.
- La rémunération hebdomadaire moyenne dans les services socio-culturels, commerciaux et personnels subit sa plus faible augmentation annuelle (+2.4%) depuis août 1987.
- Entre janvier et février, la rémunération à Terre-Neuve diminuait plutôt que d'augmenter comme à l'ordinaire.
- La Nouvelle-Écosse (+2.8%) rapportait son plus bas taux de croissance depuis octobre 1987; l'Alberta (+1.7%) montrait son plus bas taux des 13 derniers mois.

See note on "Statistical presentation" under "Concepts and Methods" at the back of this publication.

The industrial aggregate is the sum of all industries with the exception of agriculture, fishing and trapping, religious organizations, private households and military personnel.

Not adjusted for inflation.

Voir la partie "Présentation statistique" sous la rubrique "concepts et méthodes", la fin de la présente publication.

L'ensemble des activités économiques est la somme de toutes les industries l'exception de l'agriculture, la pêche et le piégeage, les organismes religieux, les mênages privés et les services de défense.

Non ajustée pour l'inflation.

Number of employees

- Between January and February, estimated employment in mines, quarries and oil wells, in construction and in transportation, communication and other utilities increased when decreases are usually observed.
- Trade recorded a smaller than usual decrease while community, business and personal services had a larger than usual increase.
- The year-to-year increases in construction (+9.8%) and in community, business and personal services (+3.9%) were their highest since February 1986 and July 1987 respectively. Finance, insurance and real estate had its smallest increase since November 1987 (+2.1%).
- Manufacturing (+2.2%) recorded its second consecutive year-over-year increase after four consecutive months of decreases.
- As a result of a labour dispute, Newfoundland registered a decrease instead of the usual increase between January and February.
- Nova Scotia and Ontario increased at a time of year when a decrease is usually observed.
- Alberta and British Columbia had larger than usual increases for this time of year.
- Ontario recorded its highest year-to-year growth rate since August 1987 (+3.4%); Alberta, its highest since October 1985 (+5.3%); British Columbia, its highest since March 1985 (+7.0%).

Hours and Hourly Earnings

- At the Canada industrial aggregate level, average weekly hours for employees paid by the hour (who account for approximately half of industrial aggregate employment) were estimated at 31.3.
- Average weekly hours for hourly paid employees were estimated at 39.0 in the goods-producing industries and 27.3 in the service-producing industries.
- Average hourly earnings for employees paid by the hour were estimated at \$11.98 in February. Earnings were \$13.98 in the goods-producing industries and \$10.52 in the service-producing industries.

Nombre de salariés

- Entre janvier et février, l'estimation du nombre de salariés dans les mines, carrières et puits de pétrole, la construction et les transports, communications et autres services publics indiquait des augmentations plutôt que les diminutions habituellement observées.
- Le commerce montrait une diminution moins forte qu'à l'ordinaire alors que les services socio-culturels, commerciaux et personnels augmentait plus que d'habitude.
- Le taux d'augmentation annuel de l'emploi dans la construction (+9.8%) était à son plus haut niveau depuis février 1986. Les finances, assurances et affaires immobilières (+2.1%) montraient leur plus basse croissance annuelle depuis novembre 1987 alors que les services socio-culturels, commerciaux et personnels (+3.9%) enregistraient leur plus fort taux d'augmentation depuis juillet 1987.
- Les manufactures (+2.2%) connaissaient une deuxième augmentation annuelle après quatre mois consécutifs de diminution.
- À cause d'un conflit de travail le nombre de salariés à Terre-Neuve diminuait au lieu d'augmenter.
- En Nouvelle-Écosse et en Ontario, l'estimation de l'emploi montrait des augmentations plutôt que les diminutions habituelles.
- L'Alberta et la Colombie-Britannique rapportaient des gains plus importants qu'à l'ordinaire.
- L'Ontario (+3.4%) enregistrait son plus haut taux de croissance annuel depuis août 1987; l'Alberta (+5.3%),son plus haut depuis octobre 1985; la Colombie-Britannique (+7.0%), son plus haut depuis mars 1985.

Heures et rémunération horaire

- Au niveau de l'ensemble des activités économiques au Canada, les heures hebdomadaires moyennes des salariés rémunérés à l'heure (ceux-ci représentent environ la moitié des salariés de l'ensemble des activités économiques) étaient estimées à 31.3.
- Selon les estimations, le nombre d'heures hebdomadaires moyennes des salariés rémunérés à l'heure atteignait 39.0 dans la branche productrice de biens et 27.3 dans la branche productrice de services.
- En février 1989, la rémunération horaire moyenne des salariés rémunérés à l'heure était estimée à \$11.98. Elle était estimée à \$13.98 dans la branche productrice de biens et à \$10.52 dans la branche productrice de services.

Concepts and methods are described at the back of this publication. Les concepts et méthodes sont décrits à la fin de la présente publication.

CONCEPTS AND METHODS

Objectives

The Survey of Employment, Payrolls and Hours is designed to measure, on a monthly basis, the levels and month-to-month rends of employment, paid hours and earnings. These measures are compiled at detailed industrial and geographic evels.

All industries are covered by the survey with the exception of agriculture, fishing and trapping, private household services, religious organizations, and military services.

Source of Data

The statistics contained in this report are based on information obtained through a mail survey of firms, institutions and organizations of all sizes.

The firm is defined as any business entity whether neorporated or not; it comprises sole proprietorships, partnerships, corporations and other forms of organization such as co-operatives. Most firms consist of only one establishment" (see definition under Industrial Classification) but, in some cases, the firm is made up of a number of isstablishments which may or may not be engaged in the same and of economic activity.

The universe for the survey is derived from a central file of imployers maintained by the Business Register Division of statistics Canada.

ndustrial Classification

If firms are assigned to an industry on the basis of their rincipal activity. In instances where the firm is engaged in only me kind of industrial activity, the industrial classification is traightforward. Classification problems arise when a firm is ctive in more than one kind of classifiable industrial activity. his usually occurs when a firm operates more than one stablishment. The establishment (typically a factory, mine, tore or a similar unit) is defined, for statistical purposes, as the mallest separate operating entity capable of reporting all lements of basic industrial data which permit the calculation of census value added or "gross mark up" or "gross profit" as rell as data on employment and payrolls.

or purposes of detailed geographical statistics, the stablishment is often sub-divided into reporting units which, ithough not capable of reporting all basic industrial statistics, an report employment, payrolls and hours data for particular cations.

he industrial classification of the statistics contained in this port is based on the 1970 version of the Standard Industrial lassification. A description of the various industries and oups of industries is contained in the "Standard Industrial lassification Manual", Catalogue 12-501. The "S.I.C. Code" blumns on the tables correspond to the codes of this manual, nese tables also contain the following groupings which are not art of the "Standard Industrial Classification Manual":

Industrial aggregate (031-951) represents the sum of all the industries included in the survey (see Objectives).

Goods-producing industries (031-421) comprise forestry, mining, manufacturing and construction.

CONCEPTS ET MÉTHODES

Objectifs

L'enquête sur l'emploi, la rémunération et les heures de travail a pour objet de mesurer mensuellement les niveaux et les tendances de l'emploi, des heures rémunérées et des gains. Ces mesures sont rassemblées à des niveaux détaillés selon l'activité économique et le lieu géographique.

L'enquête vise tous les secteurs de l'activité économique sauf l'agriculture, la pêche et le piégeage, le service domestique des ménages, les organismes religieux et les services de la défense.

Source des données

Les statistiques présentées dans ce bulletin se fondent sur des renseignements recueillis au moyen d'une enquête postale menée auprès des entreprises et autres organismes ou établissements de toutes tailles.

Le terme entreprise désigne toute entité commerciale ou industrielle constituée ou non en corporation; il peut s'agir d'une entreprise à propriétaire unique, d'une société en nom collectif, d'une corporation ou d'une autre forme quelconque d'organisation, telle une coopérative. La plupart des entreprises ne comptent qu'un seul "établissement" (voir la définition sous la rubrique "Classement par activité économique") mais, dans certains cas, l'entreprise peut regrouper plusieurs établissements qui exercent ou non le même genre d'activité.

L'univers de l'enquête est établi à l'aide d'un registre central des employeurs tenu par la Division du registre des entreprises de Statistique Canada.

Classement par activité économique

Toutes les **entreprises** appartiennent à une branche d'activité économique déterminée en fonction de leur activité principale. Si l'entreprise n'exerce qu'un seul genre d'activité économique, le classement est simple. Les problèmes surgissent lorsqu'elle en exerce plus d'un, par exemple lorsqu'elle possède plus d'un **établissement**. À des fins statistiques, on définit l'établissement (en général une usine, une mine, un magasin ou une unité semblable) comme la plus petite unité constituant un ensemble fonctionnel distinct capable de déclarer, à l'égard de l'activité économique, tous les éléments statistiques de base qui permettent de calculer la "valeur ajoutée" ou la "majoration brute" ou le "bénéfice brut", ainsi que des données sur l'emploi et la rémunération.

Pour obtenir des statistiques géographiques détaillées, souvent on subdivise l'établissement en **unités déclarantes** qui, bien qu'elles ne puissent fournir toutes les statistiques de base, sont en mesure de déclarer des données sur l'emploi, la rémunération et les heures de travail relativement à certains endroits.

Le classement des statistiques que nous présentons dans ce volume s'inspire de la Classification des activités économiques, de 1970. Vous trouverez une description de ces diverses activités et de leurs groupements dans le bulletin de la Classification des activités économiques, nº 12-501 au catalogue. Les codes C.A.E. qui apparaissent dans les colonnes de certains tableaux de notre publication correspondent au codes de ce builetin. Les tableaux en question reinferment aussi les groupes suivants, qui ne figurent pas dans la Classification des activités économiques:

- a) Ensemble des activités économiques (031-951) Il s'agit de la somme des diverses activités économiques visées par l'enquête (voir objectifs).
- b) Branche productrice de biens (031-421) Ce groupe englobe les forêts, les mines, les manufactures et la construction.

- c) Service-producing industries (501-951) consist of transportation, communication and other utilities, trade, finance, insurance and real estate, services (except for religious organizations and private households), and public administration (with the exception of military personnel, and other government services).
- d) Durable goods manufacturing (durable) includes wood industries (251-259), furniture and fixture industries (261-268), primary metal industries (291-298), metal fabricating industries except machinery and transportation equipment (301-309), machinery industries except electrical machinery (311-318), transportation equipment industries (321-329), electrical products industries (331-339), and non-metallic mineral products industries (351-359).
- e) Non-durable goods manufacturing (non-dur) is the sum of food and beverage industries (101-109), tobacco products industries (151-153), rubber and plastic products industries (162-165), leather industries (172-179), textile industries (181-189), knitting mills (231-239), clothing industries (243-249), paper and allied industries (271-274), printing, publishing and allied industries (286-289), petroleum and coal products industries (365-369), chemical and chemical products industries (372-379), and miscellaneous manufacturing industries (391-399).
- Building construction (404, 421) comprises building construction (404) and special-trade contractors (421).
- g) Industrial and Heavy (Engineering) construction (406, 409) includes highway, bridge and street construction (406) and other construction (409).
- h) Education services (809T) consist of kindergartens and nursery schools (801), elementary and secondary schools (802), schools of arts and performing arts (803), vocational centers, trade schools and business colleges (804), post-secondary non-university educational institutions (805), universities and colleges (806), and education and related services (809).
- i) Public administration (909-951) contains only the establishments engaged in activities that are governmental in character and those serving as internal service agencies of the public service. Government owned establishments primarily engaged in activities assigned to other industries are classified in those industries along with similar establishments owned by non-government bodies. Therefore, data included in this industry division do not represent the actual number of persons employed by government at any level.

Geographic Classification

Reporting units are assigned to a province, a census division, an economic region (for the province of Quebec and Ontario) and, where applicable, to a metropolitan or urban area. The survey selected metropolitan and urban areas as delineated for the 1981 Census of Population; these areas usually consist of the urban centre as well as the surrounding territory and had a population of 25,000 inhabitants or more. The reporting units not located in a tabulated urban area or not allocated to a compiled census division are included in the provincial and national totals.

A description of the various geographical areas is contained in the "Standard Geographical Classification Manual, 1981", Catalogue 12-567.

- c) Branche des services (501-951) Englobe les transports, les communications et autres services publics, le commerce, les finances, assurances et affaires immobilières, les services (sauf les organismes religieux et les ménages privés), et l'administration publique (à l'exception du personnel militaire et des autres services gouvernementaux).
- d) Fabrication des biens durables (durables) Englobe les industries du bois (251-259), l'industrie du meuble et des accessoires d'ameublement (261-268), l'industrie de première transformation des métaux (291-298), l'industrie des produits métalliques (sauf les machines et le matériel de transport) (301-309), la fabrication des machines (sauf le matériel électrique) (311-318), l'industrie du matériel de transport (321-329), l'industrie des appareils et du matériel électriques (331-339) et l'industrie des produits minéraux non métalliques (351-359).
- e) Fabrication des biens non durables (non dur.) Englobe l'industrie des aliments et boissons (101-109), l'industrie du tabac (151-153), l'industrie du caoutchouc et des produits en matière plastique (162-165), l'industrie du cuir (172-179), l'industrie textile (181-189), la bonneterie (231-239), l'industrie de l'habillement (243-249), l'industrie du papier et des produits connexes (271-274), l'imprimerie, l'édition et industries connexes (286-289), l'industrie du pétrole, du charbon et de leurs dérivés (365-369), l'industrie chimique et des produits connexes (372-379), et les industries manufacturières diverses (391-399).
- f) Bâtiment (404, 421) Englobe la construction de bâtiments (404) et l'activité des entrepreneurs spécialisés (421).
- g) Construction industrielle et lourde (travaux de génie) (406, 409) Englobe la construction de routes, ponts et rues (406) et autres constructions (409).
- h) Enseignement et services connexes (809T) Englobe les jardins d'enfants et écoles maternelles (801), les écoles primaires et secondaires (802), les écoles de beaux-arts (803), les centres de formation professionnelle, écoles de métiers et collèges commerciaux (804), les établissements d'enseignement postsecondaire non universitaire (805), les universités et collèges (806), et l'enseignement et services connexes (809).
- Administration publique (909-951) Comprend les établissements dont les activités ont un caractère essentiellement gouvernemental, et les organismes auxiliaires assurant les services internes de l'État. Les établissements publics dont l'activité dominante relève d'autres activités économiques sont classés sous les mêmes rubriques que les établissements privés semblables. Ainsi, les données publiées pour cette division économique ne représentent pas le nombre réel de personnes employées par les différents pouvoirs publics.

Classement géographique

On attribue les unités déclarantes à une province, à une division de recensement, à une région économique (pour les provinces suivantes; Québec et Ontario) et, s'il y a lieu, à une région métropolitaine ou urbaine. Les régions métropolitaines et urbaines choisies pour l'enquête sont celles du recensement de la population de 1981; ces régions, qui se composent habituellement d'un centre urbain et du territoire environnant, comptaient lors du dernier recensement 25,000 habitants ou plus. Les unités déclarantes situées en dehors de toute région urbaine indiquée dans les tableaux, ou non attribuées à une division de recensement prise en compte, font partie des totaux provinciaux et nationaux.

La description des diverses régions géographiques se trouve dans la "Classification géographique type, 1981", nº 12-567 au catalogue.

Definitions

1. Reference Period

Conceptually, the data in this report refer to the last seven days in the specified month. In practice, few firms keep payroll records covering precisely this period. Therefore, firms are asked to report for their last pay period or pay periods in each month. When the reported pay period is longer than one week, the data are reduced to a week using the number of days the firm usually operates during a week divided by the number of working days covered by the reported pay period.

If, owing to **strikes**, unpaid holidays or other similar unpaid circumstances, the data reported are not representative of the last seven days of the month, adjustments are made to reflect the economic situation of the reference period (i.e. when a strike effects the last seven days of the survey month, the derived data will reflect the strike situation).

2. Employee

All persons drawing pay for services rendered or for paid absences and for whom the employer is required to complete a Revenue Canada T-4 Supplementary Form constitute employees.

The employee concept comprises full-time employees, part-time employees (those who regularly work fewer hours than the standard work week of the establishment) and casual or temporary employees (those who are hired for discontinuous periods or on an irregular basis). It also comprises working owners, directors, partners and other officers of incorporated businesses.

The employee concept excludes owners or partners of unincorporated businesses and professional practices, the self-employed, unpaid family workers, persons doing non-remunerative work, pensioners, home workers, members of elected or appointed bodies, persons working outside Canada and military personnel. It also excludes persons who did not receive any pay from the employer for the entire survey reference period (e.g. persons on strike, persons on unpaid holidays, persons receiving remuneration from an insurance, Workmen's Compensation or other related fund, etc.); however, employees paid from the employer for a part of the reference period and unemployed or on strike for the rest are counted as employed.

The employees are classified into the following categories:

a) Employees paid by the hour

Any employee whose basic wage is expressed as an hourly

) Salaried Employees

Any employee whose basic remuneration is a fixed amount for a period of at least one week.

) Other Employees

Those employees whose basic remuneration is in the form of commissions, piece rates, mileage allowances, etc.

Définitions

1. Période de référence

En théorie, les données sur l'emploi se rapportent aux sept derniers jours du mois de référence. Dans la pratique, peu d'entreprises tiennent des registres de paye pour cette période précise; on demande donc aux répondants de faire porter leur déclaration sur la(les) dernière(s) période(s) de paye de chaque mois. Lorsque la période de paye sur laquelle porte la déclaration dépasse une semaine, on rajuste les données en divisant le nombre de jours d'activité hebdomadaire de l'entreprise par le nombre de jours ouvrables compris dans la période de paye sur laquelle porte la déclaration.

Si, en raison d'une **grève**, d'un congé non payé ou d'autres circonstances semblables, les données déclarées ne sont pas représentatives des sept derniers jours du mois, on procède aux rajustements qui s'imposent afin de traduire la situation qui régnait pendant la période de référence (cela signifie que lorsqu'une grève touche les sept derniers jours du mois döenquête, les données qui en découlent reflètent l'état de grève).

2. Salarié

Toute personne rétribuée pour ses services ou ses absences et pour laquelle l'employeur doit remplir une déclaration T-4 Supplémentaire de Revenu Canada, est un salarié.

Le terme "salarié" désigne les salariés à temps plein, les salariés à temps partiel (ceux qui travaillent régulièrement un nombre d'heures inférieur à la semaine normale de travail de l'entreprise) et les salariés occasionnels ou temporaires (ceux qui sont embauchés de façon irrégulière ou temporaire). Il désigne aussi les propriétaires, les administrateurs, les associés et les autres dirigeants actifs des entreprises constituées en corporation.

Le concept de salarié exclut les propriétaires et les associés des entreprises non constituées en corporation et ceux des bureaux voués à l'exercice d'une profession libérale, les travailleurs autonomes, les travailleurs familiaux non rémunérés, les bénévoles, les retraités, les travailleurs à domicile, les membres des corps élus ou nommés, les personnes travaillant à l'extérieur du Canada et le personnel militaire. Sont également exclus les travailleurs n'ayant pas reçu de paye de leur employeur pendant la période de référence de l'enquête (i.e. les personnes en grève, en congé non payé, celles recevant une rémunération aux termes d'un régime d'assurance, d'une caisse d'indemnisation des accidents au travail ou d'une caisse analogue, etc.); cependant, les travailleurs rémunérés par leur employeur pour une partie de la période de référence, mais en chômage ou en grève pendant l'autre partie, sont quand même considérés comme salariés.

Les salariés sont classés dans les catégories suivantes:

a) Salariés rémunérés à l'heure

Tout salarié dont la rémunération de base est calculée selon un taux horaire.

b) Employés

Tout salarié dont la rémunération de base constitue une somme fixe versée pour une période d'au moins une semaine.

c) Autres salariés

Tout salarié dont la rémunération de base se présente sous forme de commissions, de salaire à la pièce, d'indemnités de trajet, etc.

d) Non-teaching Staff

All employees other than teachers and academic staff, i.e. president, vice-president, librarian, registrar, bursar, accountant, guidance counsellor, laboratory technician, personnel officer, and other services (e.g. janitor, caretaker, bus driver, etc.)

e) Teaching Staff

Those classified as teachers, instructors or academics in the payroll records (e.g. principal, professor, dean, head of department, master, teacher, etc.) whether they teach during the day or evening. Supply or substitute teachers are excluded.

f) Supply or Substitute Teachers

Teachers who are called in to teach whenever their services are needed either to augment the existing staff or as a short-term replacement for a full-time or part-time teacher.

3. Earnings

Earnings represent gross pay before deductions for taxes, unemployment insurance contributions, etc.

The payroll concept does not include supplementary labour costs such as employer's contributions to unemployment insurance, medical plans, Workmen's Compensation and other welfare plans, nor does it include the cost of equipment, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, bonuses paid at irregular and infrequent intervals or director's fees.

a) Gross Pay

Gross pay includes salaries, straight-time wages, piece-work and regular commission earnings, regular paid incentive, cost of living and other bonuses, overtime earnings and payments to persons absent with pay in the survey reference week.

b) Overtime Pay

All pay received for the number of hours worked in excess of the standard workday or workweek.

4. Hours

a) Total hours paid

All hours worked, including overtime hours, **plus** hours of paid absence (e.g. holidays, vacation, sick leave, jury duty, etc.)

b) Overtime Hour

The total hours for which overtime was paid. These represent the hours worked.

5. Paid Absence

Paid absence comprises paid holidays, vacation, sick leave including industrial injury and personal leave such as bereavement leave, jury duty, etc.

6. Standard Workweek

The hours in the standard workweek constitute the average number of hours of work normally scheduled in a workweek.

d) Personnel non enseignant

Tous les salariés autres que le personnel enseignant, c'est-à-dire le président, le vice-président, le bibliothécaire, le secrétaire général, l'économe, le comptable, les orienteurs, les techniciens de laboratoire, les agents du personnel, le concierge, les chauffeurs d'autobus, etc.

e) Personnel enseignant

Tout travailleur classé comme enseignant ou chargé de cours dans les dossiers du service de la paye (directeur, professeurs, doyens, chefs de département, maîtres, enseignants, etc.), qu'il enseigne le jour ou le soir. Les suppléants ou remplaçants sont exclus.

f) Suppléants ou remplaçants

Enseignants appelés à se présenter au travail lorsqu'on a besoin de leurs services soit pour accroître le personnel existant, soit pour remplacer pendant une courte période un enseignant à temps plein ou à temps partiel.

3. Gains

Les gains représentent la rémunération brute avant toutes déductions d'impôt, de cotisations d'assurance-chômage, etc.

Le concept de rémunération ne comprend pas les frais supplémentaires de main-d'oeuvre tels que les contributions de l'employeur à la caisse d'assurance-chômage, aux régimes d'assurance-maladie, à la caisse d'indemnisation des accidents du travail et à d'autres régimes de prévoyance; il ne comprend pas non plus le coût du matériel, la valeur du couvert et du gîte, les paiements en nature, les frais de déplacement, les indemnités de retraite, les gratifications versées à intervalles irrégulers et peu fréquents, ni les jetons de présence des administrateurs.

a) Rémunération brute

Comprend les salaires, les traitements à taux ordinaires, la rémunération du travail à la pièce et les commissions régulières, ainsi que les primes, indemnités de vie chère et autres gratifications versées régulièrement, les payes de surtemps et la rémunération des absences payées dans la semaine de référence de l'enquête.

b) Rémunération du temps supplémentaire

Ensemble de la rémunération versée pour le nombre d'heures de travail effectuées en sus de la journée ou de la semaine normale de travail.

4. Heures

a) Nombre total d'heures payées

Ensemble des heures travaillées, y compris les heures supplémentaires, plus les heures de congé (par ex., les jours fériés, les vacances, les congés de maladie, les congés pour service judiciaire, etc.)

b) Heures supplémentaires

Total des heures payées à un taux majoré; il s'agit d'heures réellement travaillées.

5. Absence payée

Les absences payées comprennent toutes les heures rémunérées dans le cas des jours fériés payés, des vacances, des congés de maladie, annsi que des congés d'accident du travail et des congés pour motifs personnels tels que les congés de deuil et les congés pour service judiciaire.

6. Semaine normale de travail

Les heures d'une semaine normale de travail reflètent la moyenne des heures de travail normalement fixées pour une semaine.

7. Take-all and Take-some Units

Take-all units are reporting units of firms or organizations which are included in the survey sample with certainty every month. These include:

- a) All firms or organizations with 200 or more employees;
- b) Units of government departments and crown corporations:

Prior to the April 1988 reference month, the following were also included in the take-all:

- c) All firms with more than one reporting unit:
- Firms which report their survey data on computer listings rather than on standard questionnaire;
- e) Units belonging to elementary and secondary schools;
- f) Certain other pre-specified units or firms.

Take-some units are all the other firms in the universe which have a known probability of selection.

Methodology

The statistics contained in this publication are based on information obtained through a sample survey of reporting units. The data is collected by means of questionnaires mailed monthly to a sample of about 70,000 reporting units selected out of a universe of about 700,000. The sample covers all industries in scope for the survey, all provinces and territories and all sizes of units. Both the universe and the sample are updated monthly for births and deaths.

Stratification

For the determination of the survey sample size and for the purpose of the sample selection, the universe of reporting units is stratified by 12 provinces and territories, 16 industry groups and 4 size groups. (An industry group is slightly more detailed than the 1-digit industry code). The size of a unit is defined to be the total number of paid employees in that unit. The four size groups are 0 to 19, 20 to 49, 50 to 199 and 200 or more employees.

The universe of reporting units is further stratified into take-all and take-some categories as defined earlier under Definitions.

Sample allocation and selection

The size of the take-some sample for the survey has been determined so as to provide estimates of total number of paid employees at the industry group and province level with a prespecified reliability. The determination has been done under the requirement that the sample at the industry group and province level is allocated to each size group in proportion to the total estimated take-some employment in that size group. If the sampling fraction resulting from this allocation is less than .01, then a minimum sampling fraction of .01 is adopted in order to avoid unusually large weights. The allocation makes the probability of inclusion of a unit in the sample in a size stratum approximately proportional to the average number of employees per unit in that size stratum. The sample design, therefore, provides for a small sample of small reporting units if the concentration of employment is mainly in the large reporting units. On the other hand, if the proportion of total employment from small reporting units is substantial, then the sample will include a large number of small reporting units.

7. Unités à tirage complet et à tirage partiel

Les unités à tirage complet sont les unités déclarantes d'entreprises ou d'organisations incluses en permanence dans l'échantillon de l'enquête. Elles comprennent:

- a) toutes les entreprises de 200 salariés ou plus;
- b) unités des services gouvernementaux et des sociétés de la couronne;

Avant le mois de référence avril 1988, les suivantes étaient aussi incluses avec les unités à tirage complet:

- c) toutes les entreprises ayant plus d'une unité déclarante:
- d) les entreprises qui déclarent leurs données au moyen d'un imprimé d'ordinateur plutôt qu'à l'aide du questionnaire;
- e) unités propres aux écoles primaires et secondaires;
- f) d'autres unités ou entreprises préalablement choisies.

Les unités à tirage partiel sont toutes les autres entreprises qui ont une probabilité connue d'être choisies dans l'échantillon de l'enquête.

Méthodologie

Les statistiques présentées dans cette publication se fondent sur les résultats d'une enquête effectuée par sondage auprès d'unités déclarantes. Les données sont recueillies au moyen d'un questionnaire posté tous les mois à un échantillon de quelque 70,000 unités déclarantes provenant d'un univers d'environ 700,000 unités. L'échantillon couvre toutes les activités économiques que vise l'enquête, ainsi que les toutes les provinces et les territoires et toutes les tailles d'unité. Chaque mois, nous mettons à jour l'univers ainsi que l'échantillon, en tenant compte des créations et des disparitions d'unités ou d'entreprises.

Stratification

Pour déterminer la taille et la composition de l'échantillon, nous répartissons l'univers des unités déclarantes en 12 provinces et territoires, 16 groupes industriels (activités économiques) et quatre groupes de taille. (Un groupe industriel est légèrement plus détaillé qu'une industrie dont le code n'a qu'un chiffre). La taille d'une unité se définit comme étant le nombre total de salariés rémunérés que compte cette unité. Les quatre groupes de taille sont 0 à 19, 20 à 49, 50 à 199 et 200 salariés et plus.

En outre, l'univers des unités déclarantes est stratifié en deux catégories: les unités à **tirage complet** et les unités à **tirage partiel**, au sens que nous avons precisé dans la section "Définitions".

Répartition et choix de l'échantillon

La taille de la portion à tirage partiel de l'échantillon a été déterminée de façon à fournir, avec une fiabilité prédéterminée, des estimations du nombre total de salariés rémunérés, au niveau du groupe industriel et de la province. Ce calcul tient compte du fait que l'échantillon, au niveau du groupe industriel et de la province, doit être réparti dans chaque groupe de taille proportionellement à l'estimation de l'emploi total au sein de la portion à tirage partiel de chacun des groupes de taille. Si la fraction d'échantillon résultant de cette répartition est inférieure à 0.01, on la remplace alors par la fraction minimale 0.01 afin d'éviter toute pondération excessive. La répartition est telle que la probabilité qu'une unité entre dans une strate particulière de l'échantillon est à peu près proportionnelle au nombre moyen de salariés par unité comprise dans cette strate. Le plan d'échantillonnage prévoit donc un petit échantillon de petites unités déclarantes lorsque l'emploi se concentre principalement dans les grandes unités déclarantes. Par contre, si l'emploi total provenant des petites unités déclarantes est élevé, alors l'échantillon contiendra un grand nombre de petites unités déclarantes.

The number of reporting units to be selected at the industry group, province and size levels is again allocated to each three-digit industry within that industry group, province and size in proportion to the total number of reporting units in that three-digit industry. In other words, the sampling fraction used at the three-digit industry level is the same as the one determined at the industry group, province and size. However, it should be noted that a minimum sample of three units is selected whenever the use of the sampling fraction results in less than 3 units. If the universe itself is less than three units, then all the units are taken into the sample. Note that beginning with the January 1986 reference month, the sampling fractions for size group three (50 to 199 employees) in all manufacturing industries were changed to one.

A systematic sample of the predetermined number of units is drawn from the take-some universe in every three-digit industry, province and size group. The total sample is the sum of the number of take-all and selected take-some units.

Sample rotation

The design provides for rotation of the take-some sample within a three-digit industry, province and size group. Each month, approximately one-twelfth of the take-some sample is replaced. This means that units generally remain in the sample for 12 months before rotating out. The units are not eligible for reselection for at least 12 months after they rotate out.

In some small three-digit industry, province and size group cells it may not be possible to rotate out units each month. Consequently, in some small cells, units may have to stay longer than 12 months. Note that beginning with the reference month of January 1986, there is no rotation of units with 50 to 199 employees in the manufacturing industries.

Data edit and correction

All the questionnaires are initially screened for completeness by the interviewers of the Statistics Canada regional offices. Thereafter, extensive computer edit procedures for accuracy and consistency are performed at the Ottawa head office. As a result of any of the above-mentioned editing techniques, the respondent may be contacted to confirm or explain the data.

The edit procedures include the comparison of the values of key characteristics (e.g. number of employees, hours worked, salary per employee, etc.) reported for consecutive months by the same unit in order to detect large changes or errors in reporting. Whenever there is a large change or the data appears inconsistent, the record is signaled by the computer edit for review and is subject to correction or acceptance as appropriate.

Follow-up

Reporting units which are non-respondents to the initial mailing are followed up by telephone by the staff of the regional offices of Statistics Canada. Priority for this follow-up is given to (i) units which are in the sample for the first time and which have not responded, (ii) units which have not responded for two consecutive months, (iii) large non-respondent units. Follow-up also takes into account response rates and employment in the various industry groups in determining priority.

If units continue to be non-respondents even after follow-up, then data will be imputed for these units. All the records with imputed values are subject to the edits mentioned above.

Le nombre d'unités qu'il faut choisir au niveau du groupe industriel, de la province et de la taille est, en outre, réparti entre chacune des industries ayant un code à trois chiffres, lesquelles font partie du groupe industriel, de la province et de la taille considérés; cette répartition se fait proportionnellement au nombre total d'unités déclarantes comprises dans l'industrie dont le code comporte trois chiffres. En d'autres termes, la fraction d'échantillon utilisée au niveau industriel à trois chiffres est la même que celle déterminée pour le groupe industriel, la province et la taille. Il faut cependant noter que l'échantillon minimal est de trois unités, peu importe le résultat obtenu en utilisant la fraction d'échantillon. S'il y a moins de trois unités dans l'univers, toutes les unités disponibles sont incluses dans l'échantillon. Notons qu'à partir du mois de référence de janvier 1986, la fraction d'échantillon associée aux unités du groupe de la taille trois (de 50 à 199 salariés) des industries manufacturières est in

Au sein de la portion à tirage partiel, on choisit un échantillon systématique d'un nombre prédéterminé d'unités dans chaque industrie ayant un code à trois chiffres, et ce dans chaque province et chaque groupe de taille. L'échantillon total résulte de la somme du nombre d'unités à tirage complet et du nombre d'unités à tirage partiel sélectionnées.

Rotation de l'échantillon

Pour chaque industrie (code à trois chiffres), province et groupe de taille, le plan prévoit une rotation de la portion à tirage partiel de l'échantillon. Chaque mois, le douzième environ de la portion à tirage partiel de l'échantillon est remplacé. Cela signifie qu'en général les unités demeurent 12 mois dans l'échantillon avant d'en sortir par voie de rotation. Les unités ne peuvent pas être choisies de nouveau avant au moins 12 mois suivant leur mois de sortie.

Dans le cas de certaines petites cellules (une cellule regroupe les unités de même industrie au niveau du code à trois chiffres, même province et même groupe de taille), il est parfois impossible d'assurer la rotation des unités chaque mois. Ainsi, il peut arriver que des unités demeurent plus de douze mois dans certaines petites cellules. Notez qu'à partir du mois de référence de janvier 1986, dans les industries manufacturières il n'y a aucune rotation des unités ayant de 50 à 199 salariés.

Vérification des données et correction

Au départ, les interviewers des bureaux régionaux de Statistique Canada s'assurent que tous les questionnaires sont complets. Ultérieurement, le personnel du bureau d'Ottawa vérifie par ordinateur l'exactitude et la cohérence des chiffres déclarés. À chacune de ces deux étapes de vérification, un répondant peut donc être prié de confirmer ou d'expliquer ses chiffres.

Nos procédés de vérification nous permettent de comparer les valeurs de certaines caractéristiques (nombre de salariés, heures de travail, gains par salarié, etc.) déclarées par la même unité plusieurs mois de suite. Ainsi, il est possible de déceler les grandes variations ou les erreurs, s'il en est. Chaque fois qu'une forte variation apparaît ou que les données semblent inconérentes, l'ordinateur signale le cas, et l'enregistrement est aussitôt corrigé s'il comporte effectivement une erreur.

Méthode de suivi

Le personnel des bureaux régionaux de Statistique Canada relance par téléphone les unités déclarantes qui tardent à répondre au questionnaire. Cette méthode de suivi s'adresse en priorité (i) aux unités qui font partie de l'échantillon pour la première fois et qui n'ont pas encore répondu; (ii) aux unités qui accusent un retard de deux mois consécutifs; (iii) aux grandes unités non répondantes. Pour déterminer l'ordre de priorité des suivis, on tient compte des taux de réponse et du volume de l'emploi dans les différents groupes industriels.

Lorsque des unités persistent à ne pas répondre même après le suivi, des données leurs sont imputées. Tous les enregistrements dont les données découlent d'une imputation sont soumis aux vérifications mentionnées ci-dessus.

Imputation

Imputation for non-respondent units which have been in the survey for more than one month is based on the ratio of the monthly changes. The ratio of the monthly change for each characteristic is calculated from units that responded both in the current and the previous month and is applied to the previous month's data of each non-respondent.

For the non-responding units that are new to the survey, imputation is based on other sources of information such as the employment intention of the unit, the characteristics of the responding units in the same industry group, province and size.

Estimates

The basic "building block" for producing the monthly estimates is the three-digit industry, province and size group. Estimates at higher levels are obtained by the aggregation of the above estimates. Estimates of averages are obtained by first estimating the totals for the numerator and the denominator at the desired level and then calculating the ratio. Estimates for certain sub-provincial areas are also produced, treating the sub-province as a domain. Coefficients of variation for estimates of some key characteristics at all levels are also produced.

Provision has also been made in the estimation procedure to change the weights of "unusually large" observations occurring in size groups 1, 2 and 3. These observations are termed "outliers" and are judged not to be representative of other units in that size group. The weights of the remaining units are adjusted accordingly.

Reliability of the estimates

There are two types of errors possible in estimates based on a sample survey: sampling and non-sampling.

Sampling errors occur because observations are made only on a sample rather than on the entire universe. Estimates based on a sample differ from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, interviewers and processing techniques. This difference with respect to a particular estimate is called the sampling error of the estimate.

Non-sampling errors are errors which are not related to sampling and may occur in a survey operation for many easons. Non-response, coverage and classification errors, differences in the interpretation of the questions, incorrect information from respondents, mistakes in recording, coding and processing of data are examples of non-sampling errors. It should be noted that non-sampling errors also occur in complete censuses. In the Survey of Employment, Payrolls and fours, efforts to reduce non-sampling errors include careful lesign of questionnaires, editing of data, follow-up of and mputation for non-respondents and thorough control of processing operations.

ndicators of sampling error

he sampling error, as described above, is not known. lowever, it can be estimated from the sample itself by using a tatistical measure called the **standard error** of a survey stimate. When the standard error is expressed as a percent of le estimate, it is known as the relative standard error or **oefficient of variation**. Tables of indicators of the Defficients of variation are included in the complete set of oncepts and Methods available from the Labour Division ong with an explanatory note on how to use them to judge e quality of the estimates contained in this publication.

Imputation

L'imputation de données aux unités non répondantes comprises dans le champ de l'enquête depuis plus d'un mois est basée sur le ratio des variations mensuelles de ces unités. Le ratio de la variation mensuelle d'une caractéristique se calcule à partir des unités qui ont répondu pour le mois courant et le mois précédent, et s'applique aux données du mois précédent de chaque unité non répondante.

Dans le cas des unités non répondantes qui figurent dans l'enquête pour la première fois, l'imputation se fonde sur d'autres sources d'information telles que les prévisions d'emploi de l'unité et les caractéristiques des unités déclarantes du même groupe industriel, de la même province et de la même taille.

Estimations

L'élément de base qui sert à établir les estimations est l'industrie (code à trois chiffres), la province et la taille. Les estimations plus agrégatives sont obtenues par la sommation des estimations suscites. Pour calculer les moyennes, on estime d'abord les totaux du numérateur et ceux du dénominateur, au niveau désiré, puis on en fixe le ratio. Nous produisons aussi des estimations concernant certaines régions infraprovinciales, considérant chacune de ces régions comme un domaine. Enfin, nous calculons des coefficients de variation pour les estimations de certaines caractéristiques clés, à tous les niveaux.

Le procédé d'estimation comporte en outre des mécanismes qui permettent de changer les poids lorsque des observations "exceptionnellement grandes" apparaissent chez les unités des groupes de taille 1, 2 ou 3. Ces observations, dites "aberrantes", ne sont pas représentatives des autres unités du même groupe de taille, de sorte que l'on rajuste les poids des autres unités en conséduence.

Fiabilité des estimations

En ce qui concerne les estimations basées sur un sondage, il existe deux types d'erreurs possibles, soit les erreurs d'échantillonnage et les erreurs non liées à l'échantillonnage.

Les erreurs d'échantillonnage proviennent de ce que les observations se font à partir d'un échantillon au lieu de l'univers complet. Les estimations basées sur un échantillon diffèrent des statistiques que l'on obtendrait d'un recensement complet effectué au moyen des mêmes questionnaires, des mêmes directives, des mêmes interviewers et des mêmes techniques de traitement. Cette différence, lorsqu'il s'agit d'une estimation particulière, s'appelle erreur d'échantillonnage de l'estimation.

Les erreurs non dues à l'échantillonnage ne se rattachent pas à l'échantillon et peuvent se produire tout au long d'une enquête pour plusieurs raisons. Les cas de non-réponse, les anomalies de couverture et de classification, les différences d'interprétation des questions, la communication de renseignements inexacts par les répondants et les fautes d'entrée, de codage et de traitement des données sont autant d'erreurs non attribuables à l'échantillonnage. Il faut noter que des erreurs de ce genre peuvent aussi se produire dans les recensements. Pour l'enquête sur l'emploi, la rémunération et les heures de travail, nous avons tenté d'en réduire le risque par une formulation soignée des questionnaires, par une vérification rigoureuse des chiffres déclarés, par le travail de suivi, par l'imputation de données aux unités non répondantes et par un contrôle attentif des techniques de traitement.

Indicateurs des erreurs d'échantillonnage

L'erreur d'échantillonnage que nous venons de décrire reste inconnue. On peut cependant l'estimer à partir de l'échantillon, en utilisant une mesure appelée **écart-type** d'une estimation de sondage. Lorsque l'écart-type est exprimé en pource tage de l'estimation, on l'appelle écart-type relatif ou **coefficient de variation**. Des tableaux d'indicateurs de coefficient de variation sont compris dans la version complète des concepts et méthodes disponible de la Division du travail ainsi q'une note explicative sur la qualité des estimations comprises dans cette publication.

Statistical Presentation

1. Data Revision

Each month, statistics for the two latest months are prepared from the survey of Employment, Payrolls and Hours. Data for the most current month are titled **preliminary** estimates and are based on a response rate of around 80%. Estimates are also prepared for the month immediately preceding the most current month; these are known as **revised** estimates and are based on a higher rate of response (approximately 90%).

2. Data Release

As soon as the estimates become available, selected highly aggregated statistics are released in the Statistics Canada Daily, while detailed data are entered in the Canadian Socio-Economic Information Management System (i.e. CANSIM).

Detailed estimates appear in this report at a later date.

3. Rounding

Totals and averages for any level of geographical or industrial aggregation are calculated using unrounded figures and then rounded using the usual procedure adopted by Statistics Canada. Published employment figures are rounded to hundreds. The sum of individually rounded items may not always equal the total.

4. Averages

The average weekly earnings (including overtime) is obtained by dividing the total weekly payrolls by the number of employees. It is calculated for the total number of employees, for the hourly-rated employees, for the salaried employees, and for the other types of employees.

The average weekly overtime earnings is derived by dividing the overtime weekly payrolls by the number of employees. It is calculated for the total number of employees, the hourly-rated employees and the salaried employees.

The average hourly earnings (including overtime) is obtained by dividing the total weekly payrolls by the total weekly number of hours (the total weekly number of hours is reported for the hourly-rated employees while, for salaried employees, it is derived by multiplying the average standard workweek hours by the number of salaried employees). It is calculated for the hourly-rated employees and for the salaried employees.

The average hourly overtime earnings is calculated for the hourly-rated employees by dividing the overtime weekly payrolls by the weekly number of overtime hours reported for this group of employees.

The average weekly hours (including overtime) is obtained by dividing the total weekly number of hours by the number of employees. This statistic is calculated for the hourly-rated employees and the salaried employees.

The average weekly overtime hours is derived by dividing the weekly number of overtime hours by the number of employees. This average is calculated for the hourly-rated employees.

Présentation statistique

1. Révision des données

Chaque mois, nous préparons, à l'égard des deux derniers mois, des statistiques tirées de l'enquête sur l'emploi, la rémunération et les heures de travail. Les données du mois le plus récent sont appelées estimations préliminaires et se fondent sur un taux de réponse d'environ 80%. Nous etablissons également des estimations pour le mois qui précède le mois le plus récent; il s'agit d'estimations révisées qui prennent appui sur un taux de réponse plus élevé (environ 90%).

2. Diffusion des données

Dès que les estimations requises sont disponibles, des statistiques choisies à un niveau d'agrégation élevé paraissent dans le Quotidien de Statistique Canada, tandis que les chiffres détaillés sont introduits dans le Système canadien d'information socio-économique (CANSIM).

Les estimations détaillées apparaissent dans ce bulletin plus tard.

3. Arrondissement

Les totaux et les moyennes des divers niveaux d'agrégation géographique ou industrielle sont calculés au moyen des chiffres bruts, ensuite arrondis conformément à la méthode d'arrondissement habituelle de Statistique Canada. Les nombres publiés concernant l'emploi sont arrondis à la centaine. Par conséquent, il peut arriver que la somme des chiffres arrondis individuellement ne corresponde pas au total.

4. Moyennes

On obtient les rémunérations hebdomadaires moyennes (y compris celles du temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure, d'employés et des autres catégories de salariés.

Pour obtenir les rémunérations hebdomadaires moyennes du temps supplémentaire, on divise les rémunérations hebdomadaires pour le temps supplémentaire par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure et d'employés.

On obtient les gains horaires moyens (y compris la rémunération pour le temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre total hebdomadaire d'heures travaillées (le nombre total d'heures hebdomadaires est celui déclaré pour les salariés rémunérés à l'heure, tandis que dans le cas des employés on l'établit en multipliant la moyenne des heures fournies pendant la semaine normale de travail par le nombre d'employés). Nous calculons cette statistique à l'égard des salariés rémunérés à l'heure et des employés.

Quant au temps supplémentaire, on calcule les gains horaires moyens des salariés rémunérés à l'heure en divisant les rémunérations hebdomadaires pour le temps supplémentaire par le nombre d'heures supplémentaires hebdomadaires déclarées pour ce groupe de salariés.

Pour déterminer les heures hebdomadaires moyennes (y compris les heures supplémentaires) on divise le total des heures hebdomadaires par le nombre de salariés. Cette statistique est établie à l'égard des salariés rémunérés à l'heure ainsi qu'à l'égard des employés.

Pour calculer les heures supplémentaires moyennes hebdomadaires on divise le nombre d'heures supplémentaires hebdomadaires par lé nombre de salariés.

The average weekly earnings (excluding overtime) is obtained by dividing the weekly payrolls, which exclude the overtime weekly payrolls, by the number of employees. This estimate is calculated for hourly-rated employees and salarned employees.

5. Unpublished Data

A large number of non-confidential detailed industrial and geographic estimates are compiled but not included in this report. Although the reliability of these estimates may be lower than the reliability of the published estimates, these data will be available on request on a cost recovery basis.

In addition to the total number of employees for the education industry, data are also available for the teaching and non-teaching staff separately.

6. Annual Averages

Annual averages of employment, earnings and hours data for the years 1983-1988 are available. The summary reports or user-specified tabulations can be ordered, on a cost recovery basis, from the Labour Division.

7. CANSIM

Some of the data published in this report are also avaible in machine readable form through CANSIM (Canadian Socio-Economic Information Management System).

Tables giving the Cansim matrices and series numbers and the types of survey estimates which provides the user with an easy and quick link to Cansim system are available from the Labour Division at (613)951-4090. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Bldg., Ottawa, Ontario, K1A 0T6.

8. Confidentiality

The information presented in this publication has been reviewed to ensure that the confidentiality of individual responses is respected.

La moyenne des rémunérations hebdomadaires (temps supplémentaire exclu) s'obtient en divisant les rémunérations hebdomadaires, qui excluent les rémunérations hebdomadaires pour le temps supplémentaire, par le nombre de salariés. Cette estimation est calculée à l'égard des salariés rémunérés à l'heure, de même qu'à l'égard des employés.

5. Données non publiées

Nous établissons, aux niveaux industriel et géographique, un grand nombre d'estimations non confidentielles détaillées qui, toutefois, ne figurent pas dans le présent ouvrage. Bien que leur fiabilité puisse être plus faible que celle des estimations publiées, ces données peuvent être obtenues sur demande sur une base de recouvrement des coûts.

Outre le chiffre total des salariés du domaine de l'éducation, nous pouvons aussi fournir des données distinctes concernant le personnel enseignant et le personnel non enseignant.

6. Moyennes annuelles

Les moyennes annuelles pour l'emploi, la rémunération et les heures de travail sont disponibles pour les années 1983-1988. Ces rapports sommaires ou des tolalisations spéciales sont diponibles, moyennant le recouvrement des coûts, de la Division du travail.

7. CANSIM

Certaines données qui apparaissent dans la présente publication sont également disponibles sous une forme ordinolingue dans CANSIM (Système canadien d'information socio-économique).

Des tableaux indiquant le numéro de matrices et les numéro de séries de Cansım ainsi que les types d'estimations de l'enquête, lesquels fournissent à l'utilisateur un moyen d'accès facile et rapide au système Cansım, sont disponibles auprès de la Division du travail au (613)951-4090. Pour de plus amples informations concernant CANSIM téléphoner à (613) 951-8200 ou écrire à Division de la diffusion informatique des données, Statistique Canada, immeuble R.H. Coats, Ottawa, Ontario, K1A OT6.

8. Confidentialité

Les données du présent bulletin sont vérifiées afin de s'assurer qu'elles respectent le caractère confidentiel des réponses fournies par les entreprises.

NOTES TO USERS

I. UPCOMING CHANGES TO SURVEY (1989)

Several important changes to the Employment, Earnings and Hours program are being planned for 1989. These changes are intended to improve the usefulness and accuracy of the information we provide to our users.

The major changes are:

- New Standard Industrial Classification (SIC): The 1980 version of the SIC will replace the 1970 version now in use;
- Publication Re-design: the Employment, Earnings and Hours publication (catalogue 72-002) is being completely redesigned and will contain only two-digit level and higher industry detail rather than the three-digit level detail it currently provides;
- Publication Price Reduction: Expected cost reductions through the publication re-design will result in a reduced publication price;
- Special products: Custom-tailored reports or more detailed data (eg. 3 digit industry or sub-provincial detail) than that contained in the publication will be provided faster and more economically;
- Conversion to a new survey sampling frame data base to improve coverage and data quality;
- Historical Data: Data will be revised on a consistent basis back to 1983 on the 1980 SIC version to provide better level and trend estimates.

More information on these upcoming changes will be announced in future publications.

II. CHANGES TO SURVEY (1983-1988)

Data revisions - September 1988

There has been a revision to the data published for the month of September 1988 in certain industries for Manitoba and Canada. All variables (number of employees and average weekly earnings) may be affected by the revisions.

For more information see the errata in the December 1988 issue.

New Take-all Definition

A change in the definition of Take-all units was introduced with the release of the April 1988 estimates of Employment, Earnings and Hours.

AVIS AUX UTILISATEURS

CHANGEMENTS PROCHAINS À L'ENQUÊTE (1989)

La Division du travail prépare pour l'année 1989, plusieurs changements importants à son programme sur l'Emploi, les gains et la durée du travail. Ces changements ont pour but d'améliorer l'utilité et la précision des renseignements fournis aux utilisateurs.

Les principales modifications sont:

- une nouvelle classification type des industries (CTI): la version 1980 de la CTI remplacera la version 1970 présentement utilisée;
- nouvelle conception de la publication: la publication Emploi, gains et durée du travail (72-002 au catalogue) sera transformée et contiendra seulement des détails aux niveau des codes industriels à 2 chiffres ou des agrégations plus élevées (1 chiffre ou agrégations spéciales) plutôt que le détail au niveau du code à 3 chiffres présentement disponibles:
- réduction dans le prix de la publication: il est anticipé qu'une réduction des coûts de production de la publication suite aux modifications apportées, résultera en une diminution du prix;
- produits spéciaux: des totalisations propres aux besoins des utilisateurs ou des totalisations contenant plus de détails (codes à 3 chiffres ou données sous-provinciales) que la publication, seront disponibles de façon plus rapide et économique;
- conversion à une nouvelle base de sondage afin d'améliorer la couverture et la qualité des données;
- données historiques: les données seront révisées à partir de 1983, sur la base de la CTI 1980 pour permettre de meilleurs estimés du niveau et de la tendance.

Plus d'informations sur ces changements vous seront communiquées dans les prochains numéros de cette publication.

II. CHANGEMENTS À L'ENQUÊTE (1983-1988)

Révisions aux données - Septembre 1988

Des révisions ont été apportées aux chiffres publiés pour le mois de septembre 1988 dans certaines industries pour le Manitoba et le Canada. Toutes les variables (emploi et rémunération hebdomadaire moyenne) peuvent être affectées par les révisions.

Pour de plus amples renseignements voir l'errata dans le numéro de décembre 1988.

Nouvelle définition des unités à tirage complet

Une modification a été apportée à la définition des unités à tirage complet à partir d'avril 1988 concernant l'emploi, les gains et la durée du travail.

Firms with more than one reporting unit but less than 200 employees will no longer be surveyed as part of the Take-all group. Although these firms represent a large number of reporting units they account for a small percentage of total employment. The change was made to reduce the cost of the Survey of Employment, Payrolls and Hours, to reduce respondent burden and, ultimately, to produce a more useful and consistent data series representing all firms with 200 or more employees.

Because the immediate introduction of the new definition would result in breaks in the Take-all and All units series, measures are being taken to maintain the continuity of the existing series. A complete revision will be undertaken in 1989 (see Upcoming Changes to Survey). From April 1988 onward, the month-to-month movements of the Take-all series will be based on data trends of firms with more than 200 employees.

• Data Revisions - January to April 1987

Changes to the survey of Employment, Payrolls and Hours (SEPH) sampling frame were phased-in over a four-month period beginning with January 1987. Major changes included improvements to the coverage of firms in the survey sampling frame and a re-assignment of some establishments to more appropriate industry, geographic and / or employment size categories. Revised sampling fractions were also implemented in a number of areas to improve the efficiency of the sample. These changes were designed to improve the accuracy and reliability of the estimates. The phase-in over the four months, however, affected the month-to-month comparability of the published estimates over this period.

Data for the months of January, February and March 1987 were revised from the originally published information to remove the impact of the phase-in and to provide data for the first four months of 1987 on a consistent basis. The revised data were published in the May 1987 issue of this catalogue.

Adjustments to SEPH data for the period 1983-1986 are required when making comparisons with the 1987 estimates and later estimates. Adjustment factors needed to make such comparisons and explanations on their use were published in the May 1987 issue. The factors are also available on request from the Labour Division.

Sample Size Increase in Manufacturing Industries

The sample size of the Survey of Employment, Payrolls and Hours was increased by 2,000 establishments in the manufacturing industry in order to improve the quality of the estimates at the detailed industry level. Commencing with the data for January, 1986, all manufacturing firms with 50 to 199 employees were included in the sample with

Les entreprises ayant plus d'une unité déclarante mais moins de 200 salariés ne font plus partie, aux fins de l'enquête, du groupe d'unités à tirage complet. Ces entreprises représentent une grande proportion des unités déclarantes mais un faible pourcentage du total de l'emploi. Le but de cette modification est de réduire le coût de l'enquête sur l'emploi, la rémunération et les heures de travail, de réduire le fardeau de réponse et de produire finalement une série de données plus utiles et cohérentes à l'égard des entreprises ayant 200 salariés ou plus.

Comme l'introduction immédiate de la nouvelle définition entraînerait une discontinuité dans les séries concernant les unités à tirage complet et l'ensemble des unités, on a pris des mesures pour maintenir la continuité des séries actuelles. Une révision complète sera exécutée en 1989 (voir les changements prochains à l'enquête). À partir d'avril 1988, les variations mensuelles de la série des unités à tirage complet seront fondées sur les tendances des entreprises ayant plus de 200 salariés.

Révisions aux données - Janvier à avril 1987

Les modifications apportées à la base de sondage de l'enquête sur l'emploi, la rémunération et les heures de travail (EERH) ont été incorporées au cours d'une période de quatre mois à compter du mois de référence de janvier 1987. Les principales modifications comprennent des améliorations au champ d'observation des entreprises dans la base de sondage de l'enquête, la réaffectation de certains établissement et de la taille de l'emploi et des révisions aux fractions de sondage dans un certain nombre de domaines. Ces modifications sont destinées à améliorer la précision et la fiabilité des estimations. La mise en oeuvre des modifications au cours de ces quatre mois a cependant affecté la comparabilité d'un mois à l'autre des estimations publiées pendant cette période.

Les données pour janvier, février et mars 1987 ont été révisées par rapport aux estimations déjà publiées afin d'éliminer les conséquences de la mise en oeuvre des modifications et de présenter des données pour les quatre premiers mois de 1987 sur une base cohérente. Ces données révisées ont été publiées dans le numéro de mai 1987.

Il faut corriger les données de l'EERH pour la période 1983 à 1986 lorsque l'on procède à des comparaisons avec les estimations de l'année 1987 ou des années subséquentes. Les facteurs d'ajustement nécessaires pour effectuer ces comparaisons et les explications pour leur emploi ont été publiés dans le numéro de mai 1987. Les facteurs sont aussi disponibles sur demande auprès de la Division du travail.

Augmentation de la taille de l'échantillon dans les industries manufacturières

Dans le but d'améliorer la qualité des séries publiées par l'enquête sur l'emploi, la rémunération et les heures de travail sur les industries manufacturières, 2,000 entreprises ont été ajoutées à l'échantillon de ce secteur. À partir du mois de référence de janvier 1986, toutes les entreprises manufacturières ayant 50 à 199 salariés sont incluses dans l'échantillon. Auparavant, seul un échantillon de ces

certainty. These firms had previously been surveyed on a sample basis. Estimates originally published for January and February, 1986, did not include these additional units so that the impact on the manufacturing data and the Industrial Aggregate could be assessed prior to publication. Data for January and February, revised to reflect this change, were first presented in the March 1986 issue of this publication.

Industrial Composite

Note that the publication of the Estimates of Average Weekly Earnings for "Industrial Composite" was terminated with the December 1985 estimates.

Revisions to Historical Data (1984)

There has been a revision to the data published monthly in the January to July 1984 issues of Catalogue 72-002 for certain industries. The revised series appear in the September 1984 issue. All data variables at the Canada, Provinces and Territories level may be affected.

III. NOTE ON SUB-PROVINCIAL DATA

DATA AVAILABILITY

Effective with June 1985, data on urban areas were removed from Catalogue 72-002, Employment, Earnings and Hours due to:

- limitations regarding data reliability
- increasing cost of producing the publication

SOURCES OF ACCESS TO THESE DATA

- a) Annual Averages and Monthly Estimates Reports (1987) and (1988) Annual Averages and Time Series Report (1983 to 1986)
- data available for:

Employment, Earnings and Hours for total manufacturing and industrial aggregate for the 25 Census Metropolitan Areas in Canada. Also included for Canada and provinces are major variables and industries.

Price: \$50.00 hard copy \$75.00 diskettes

available from:

Dissemination Section, Labour Division, Statistics Canada, Ottawa (613) 951-4090 and, Regional Reference Centres of Statistics Canada (Refer to the telephone numbers listed on the reverse of the front page of this catalogue).

entreprises était enquêté. Les chiffres originalement publiés pour les mois de janvier et de février 1986 n'incluaient pas ces unités additionnelles. Le but de ce délai était de déterminer l'impact sur les estimations des industries manufacturières et de l'ensemble des activités économiques. Il est important de noter que les chiffres de janvier et février, révisés pour refléter le changement, ont été publiés dans le numéro de mars 1986 de ce catalogue.

Ensemble des industries

Veuillez noter que les Estimations de la rémunération hebdomadaire moyenne pour "l'ensemble des industries" ont cessé d'être publiées avec les estimations révisées de décembre, 1985.

• Révisions aux données historiques (1984)

Des révisions ont été apportées aux chiffres publiés dans le catalogue mensuel numéro 72-002 pour les mois de janvier à juillet 1984, pour certaines industries. Les séries révisées figurent dans le catalogue du mois de septembre 1984. Toutes les variables aux niveaux du Canada, provinces et territoires peuvent être affectées.

III. NOTE SUR LES ESTIMATIONS INFRA-PROVINCIALES

• DISPONIBILITÉ DES ESTIMATIONS

Depuis juin 1985, les estimations pour les régions urbaines ne paraissent plus dans le n° 72-002 au catalogue, Emploi, gains et durée du travail. Ces estimations ont été suprimées de la publication pour les raisons suivantes:

- limites associées à la fiabilité des données
- augmentation des coûts de production de la publication

SOURCES D'ACCÈS AUX ESTIMATIONS

- a) Rapports des moyennes annuelles et des estimations mensuelles (1987) et (1988) Rapport des moyennes annuelles et des séries chronologiques (1983 à 1986)
- données disponibles pour:

Emploi, gains et durée du travail pour le total des industries manufacturières et l'ensemble des activités pour les 25 régions métropolitaines de recensement du Canada. Les principales variables des groupes industriels majeurs pour le Canada et les provinces sont également inclues.

Prix: \$50.00 pour l'imprimé \$75.00 pour les disquettes

• disponible auprès de:

Section de diffusion, Division du Travail, Statistique Canada, Ottawa (613) 951-4090 et, Centres régionaux de consultation de Statistique Canada (consulter les numéros de téléphone qui se trouvent au verso du couvert de ce catalogue).

b) Data confirmation/special tabulations

data available for:

Employment, Earnings and Hours variables including their coefficients of variation, for all geographic levels and industrial activities. The release of these data are subject to confidentiality.

available from:

Dissemination Section, Labour Division, Statistics Canada, Ottawa (613) 951-4090

c) CANSIM (Statistics Canada's computerized data bank)

data available for:

Employment and earnings for all sub-provincial areas and for selected industrial detail.

available from:

Electronic Data Dissemination Division, Statistics Canada, Ottawa (613) 951-8200

LIMITATIONS ASSOCIATED WITH THE RELIABILITY OF SUB-PROVINCIAL DATA

a) Methodological constraints

The survey was not designed to produce reliable estimates at the sub-provincial level. Estimation of variables for the sub-provincial level is derived using the provincial weights. The survey methodology, therefore, does not guarantee that the sample in any one sub-provincial area will be representative of the population of that area. In addition, the sample in an area may change from one month to the next due to rotation of units into and out of the sample, which may cause a shift in the level of the estimate.

b) Changes to the sampling frame

In January 1987, changes were made to the SEPH sampling frame (see May 1987, publication 72-002 Employment, Earnings and Hours). These modifications caused a break in the series produced by the survey. Thus, it is not possible to compare data for 1987 and subsequent years to that of previous years. At present, adjustment factors are only available for Canada and provinces.

c) Introduction of the new take-all definition

Since April 1988, firms with more than one reporting unit but less than 200 employees, are no longer surveyed as part of the take-all group and therefore are not included with certainty each month in the survey. Although measures were taken to maintain the continuity of existing series at the national and provincial levels, impacts due to the introduction of the new take-all definition have not been assessed on sub-provincial data.

b) Confirmation des estimations/production totalisations spéciales

données disponibles pour:

L'emploi, la rémunération et les heures de travail ainsi que leur coefficient de variation pour tous les niveaux géographiques et activités économiques. La diffusion de ces données est cependant restreinte par la confidentialité.

• disponible auprès de:

Section de diffusion, Division du travail, Statistique Canada, Ottawa (613) 951-4090

c) CANSIM (base de données informatisées de Statistique Canada)

• données disponibles pour:

Emploi et gains pour toutes les régions infra-provinciales et pour certaines activités économiques.

• disponible auprès de:

Division de la diffusion informatique des données, Statistiques Canada, Ottawa (613) 951-8200

LIMITES ASSOCIÉES À LA FIABILITÉ DES ESTIMATIONS INFRA-PROVINCIALES

a) Contraintes méthodologiques

L'enquête n'a pas été conçue de façon à produire des estimations fiables pour les régions infra-provinciales. Ces estimations sont dérivées en utilisant la pondération assignée aux unités sélectionnées au niveau de la province. La méthodologie de l'enquête ne garantit donc pas que l'échantillon soit représentatif de la population au niveau infra-provincial. De plus, l'échantillon d'une région peut être modifié d'un mois à l'autre dû à la rotation d'unités qui entrent et sortent de l'enquête, ce qui peut causer un changement dans le niveau des estimations.

b) Changements effectués à la base de sondage

En janvier 1987, des changements effectués à la base de sondage de l'EERH ont entraîné une brisure dans les séries produites par l'enquête (voir catalogue 72-002 Emploi, gains et durée du travail, mai 1987). Ainsi, on ne peut pas comparer les estimations de 1987 et années subséquentes avec celles des années antérieures car en ce moment les facteurs d'ajustement sont disponibles uniquement pour le Canada et les provinces.

c) Introduction de la nouvelle définition des unités à tirage complet

À compter d'avril 1988, les entreprises ayant plus d'une unité déclarante mais moins de 200 salariés ne font plus partie du groupe d'unités à tirage complet, c'est-à-dire qu'elles ne sont plus recensées de façon permanente dans l'enquête. Bien que des mesures aient été prises pour maintenir la continuité des séries actuelles pour le Canada et les provinces, l'impact causé par l'introduction de la nouvelle définition des unités à tirage complet n'a pas été évalué au niveau infra-provincial.

DATA QUALITY INDICATOR

Coefficient of Variation

The sample estimate and its coefficient of variation may be used to derive a standard error and to construct a confidence interval within which the unknown census value is expected to be contained (see note on coefficient of variation for its utilization). Although the coefficient of variation attached to sub-provincial estimates gives some indication of the standard deviation of units in the sample, it does not measure the reliability of the level and the consistency of the estimate from one time period to another. High standard errors or coefficients of variation which change significantly from month to month indicate that the sample is changing and that the monthly movements should be interpreted with caution.

The user is encouraged to treat the sub-provincial data as a complimentary source of information to the more reliable SEPH estimates at higher levels of geographic and industrial aggregation.

Note: It must be noted that most of the products and services mentioned above are available on a cost-recovery basis. For additional information on any of the above issues, or on the use or application of data series, please contact Renée Arsenault of the Labour Division at (613)951-4090.

INDICATEUR DE LA QUALITÉ DES ESTIMATIONS

Coefficient de variation

En utilisant l'estimation et le coefficient de variation, il est possible de dériver un écart-type et de construire un intervalle de confiance pour cerner la valeur inconnue qui aurait été produite par un recensement (voir note sur le coefficient de variation pour son utilisation). Le coefficient de variation rattaché aux estimations infra-provinciales fournit une indication de l'écart-type des unités dans l'échantillon sans toutefois mesurer la fiabilité du niveau et de la cohérence de ces estimés d'un mois à l'autre. Lorsque l'écart-type est élevé ou que le coefficient de variation varie beaucoup d'un mois à l'autre, ceci indique que l'échantillon est instable et que les variations mensuelles des estimations doivent être interprétées avec précaution.

L'utilisateur est encouragé à consulter les estimations infra-provinciales comme source d'information complémentaire à des estimations plus fiables produites par l'EERH, à des niveaux géographiques et économiques plus élevés.

Nota: Il est à noter que la plupart des services et produits ci-haut mentionnés sont disponibles sur une base de recouvrement des coûts. Pour de plus amples renseignements sur les sujets précités, ou sur l'utilisation et l'application de séries alternatives, communiquer avec Renée Arsenault de la Division du travail à (613)951-4090.

Pour obtenir plus de renseignements sur toute la gamme de publications et de services qu'offre Statistique Canada, veuillez composer le numéro sans frais 1-800-267-6677.

Statistique Canada fournit l'information à la base des grandes réalisations.

With so many Canadians being injured in job-related accidents, the development of effective occupational health and safety programs should start with WORK INJURIES 1984-1986.

Fifty pages of text and tables present statistics on 28 natures of injury, 9 parts of body, 50 sources of injury, and 16 types of accident. In addition, the data are tabulated by occupation, age and sex of the injured worker, as well as by province and industry of the employer.

To order Work Injuries 1984-1986 (#72-208) send cheque or money order for \$22.00 in Canada, (\$23.00 outside Canada), payable to the Receiver General for Canada/Publications to: Publications Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6 or, using Visa or, MasterCard, call toll-free 1-800-267-6677.

Quand arrive le temps de mettre sur pied des programmes de santé et de sécurité au travail, on doit pouvoir compter sur des données à jour et fiables concernant les accidents du travail et les victimes de ces accidents. C'est ce genre de données que renferme **Accidents du travail**, 1984-1986.

Les cinquante pages de texte et de tableaux que contient cette publication présentent des statistiques sur 28 types et 50 causes de lésions, 9 des parties du corps les plus souvent lésées et 16 genres d'accidents. En outre, les données sont totalisées selon la profession, l'âge et le sexe du travailleur blessé, ainsi que selon la province et l'activité économique de l'employeur.

Pour commander Accidents du travail, 1984-1986 (n° 72-208 au répertoire), envoyez un chèque ou un mandat-poste (\$22 au Canada; \$23 à l'étranger) fait à l'ordre du Receveur général du Canada – Publications à: Ventes des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6, ou téléphonez au numéro sans frais 1-800-267-6677 et portez votre commande à votre compte Visa ou MasterCard.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Employment, Earnings and Hours,

Les données du mois le plus récent sont des estimations préliminaires et seront révisées lors de la prochaine parution de cette publication.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

Note on CANSIM

Some of the data published in Employment, Earnings and Hours (Catalogue 72-002) are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. Data for urban areas are also available on CANSIM. Users interested in accessing data via CANSIM should contact one of Statistics Canada's regional centres at the numbers listed on the inside front cover of this publication or contact CANSIM directly at (613)951-8200.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

Note concernant CANSIM

Quelques données publiées dans l'Emploi, gains et durée du travail (n° 72-002 au catalogue) peuvent être obtenues sous forme lisible par machine de CANSIM (Système Canadien d'information socio-économique). Les séries historiques sont généralement plus longues sur CANSIM. Les données pour les régions urbaines sont aussi disponibles sur CANSIM. Les utilisateurs voulant obtenir des chiffres par l'intermédiaire de CANSIM doivent contacter un des centres de consultation de Statistique Canada dont les numéros de téléphone se trouvent à l'endos du couvert de cette publication ou en communiquant directement avec CANSIM au (613)951-8200.

Highlights

(Preliminary Estimates1 (Data not seasonally adjusted) - March 1989

Industrial Aggregate Summary

The preliminary estimate of average weekly earnings for all employees in the industrial aggregate2 was \$477.21 for March, an increase of 0.5% from February. Average weekly earnings increased over March 1988 by 4.0%3 (\$18.47). Manufacturing and community, business and personal services were the largest contributors to this increase.

industrial aggregate employment was Canada estimated at 10,184,000, an increase of 93,000 (+0.9%) from February. This is similar to the increases usually observed at this time of year. The employment increase of 325,000 (+3.3%) over March 1988 was the largest year-over-year percentage growth since December 1986. Community, business and personal services contributed half of this increase.

Average Weekly Earnings

- Between February and March, average weekly earnings in forestry, and community, business and personal services increased at a time of year when decreases are usually observed.
- Increases in mines, quarries and oil wells in Alberta were due to higher than usual overtime payments.
- Finance, insurance and real estate registered a smaller than usual increase, mainly due to decreased commission payments in both the security brokers and dealers, and real estate industries.
- Between February and March, earnings in Alberta and British Columbia increased more than usual. with increases spread across most industries.

Faits saillants

Estimations préliminaires¹ (Données non désaisonnalisées) - Mars 1989

Sommaire pour l'ensemble des activités économiques

Selon les données préliminaires, en mars 1989, la rémunération hebdomadaire moyenne pour l'ensemble des activités économiques² ,était estimée à \$477.21, en hausse de 0.5% par rapport à février. Par rapport à mars 1988, la rémunération était en hausse de 4.0%3 (\$18.47), Cette augmentation annuelle provenait principalement manufactures et des services socio-culturels, commerciaux et personnels.

Le nombre de salariés pour l'ensemble des activités économiques au Canada a atteint 10,184,000, en hausse de 93,000 (+0.9%) par rapport à février (données non désaisonnalisées). Cette augmentation est semblable à celles observées dans les années passées. Par rapport à mars 1988, le nombre de salariés a augmenté de 325,000 (+3.3%), sa plus forte croissance annuelle depuis décembre 1986. La moitié de cette augmentation provenait des services socio-culturels, commerciaux et personnels.

Rémunération hebdomadaire moyenne

- Entre février et mars, la rémunération dans les forêts et les services socio-culturels, commerciaux et personnels montrait des hausses plutôt que les habituelles.
- L'augmentation de la rémunération dans les mines. carrières et puits de pétrole en Alberta était due à des paiements d'heures supplémentaires plus élevés qu'à l'ordinaire.
- Les finances, assurances et affaires immobilières augmentaient moins qu'à l'ordinaire principalement à cause de diminution dans les paiements de commissions dans les industries des agences de change et de courtiers en valeurs mobilières et des affaires immobilières.
- Entre février et mars, la rémunération en Alberta et en Colombie-Britannique augmentait plus que d'habitude. Les augmentations provenaient de la plupart des industries.

See note on "Statistical presentation" under "Concepts and Methods" at the back of this publication.

The industrial aggregate is the sum of all industries with the exception of agriculture, fishing and trapping, religious organizations, private households and military personnel.

Note adjusted for inflation.

Voir la partie "Présentation statistique" sous la rubrique "concepts et méthodes", à la fin de la présente publication. L'ensemble des activités économiques est la somme de toutes les

industries à l'exception de l'agriculture, la pêche et le piégeage, les organismes religieux, les ménages privés et les services de défense,

Non ajustée pour l'inflation.

- Prince Edward Island (+1.8%) had its lowest year-over-year increase in earnings in 14 months, while Québec (+3.0%) had its lowest increase since March 1987.
- British Columbia registered its highest year-over-year increase since November 1987.

Number of employees

- Between February and March, transportation, communication and other utilities increased more than usual, despite a labour dispute in the radio and television broadcasting industry.
- Mines, quarries and oil wells (-4.9%) showed a sixth consecutive annual decrease.
- Finance, insurance and real estate continued to decelerate, with its annual growth rate declining to 1.3%, the smallest increase in the last five years. In contrast, community, business and personal services (+4.7%) continued its rapid growth.
- Newfoundland registered an increase instead of the usual decrease between February and March, due to the ending of a labour dispute in the fish products industry.

Hours and Hourly Earnings

- At the Canada industrial aggregate level, average weekly hours for employees paid by the hour (who account for approximately half of industrial aggregate employment) were estimated at 31.3 in March.
- Average weekly hours for hourly paid employees were estimated at 38.4 in the goods-producing industries and 27.7 in the service-producing industries.
- Average hourly earnings for employees paid by the hour were estimated at \$12.06: \$14.15 in the goods-producing industries and \$10.58 in the service-producing industries.

- L'Île-du-Prince-Édouard (+1.8%) rapportait son plus bas taux de croissance des 14 derniers mois; le Québec (+3.0%) montrait son plus bas taux des deux dernières années.
- Le taux de croissance de la Colombie-Britannique était à son plus haut depuis novembre 1987.

Nombre de salariés

- Malgré un conflit de travail dans l'industrie de la radiodiffusion et télévision, l'estimation du nombre de salariés des transports, communications et autres services publics montrait une augmentation plus forte qu'à l'ordinaire.
- Les mines, carrières et puits de pétrole (-4.9%) montraient une sixième diminution annuelle consécutive.
- Les finances, assurances et affaires immobilières (+1.3%)
 continuaient de montrer une décélération de leur taux de
 croissance alors qu'ils présentaient leur plus faible
 augmentation des derniers cinq ans. Les services
 socio-culturels, commerciaux et personnels (+4.7%)
 continuaient leur croissance rapide.
- Le nombre de salariés à Terre-Neuve augmentait au lieu de diminuer à cause de la fin d'un conflit de travail dans l'industrie de la transformation du poisson.

Heures et rémunération horaire

- En mars, au niveau de l'ensemble des activités économiques au Canada, les heures hebdomadaires moyennes des salariés rémunérés à l'heure (ceux-ci représentent environ la moitié des salariés de l'ensemble des activités économiques) étaient estimées à 31.3.
- Selon les estimations, le nombre d'heures hebdomadaires moyennes des salariés rémunérés à l'heure atteignait 38.4 dans la branche productrice de biens et 27.7 dans la branche productrice de services.
- La rémunération horaire moyenne des salariés rémunérés à l'heure était estimée à \$12.06. Elle était estimée à \$14.15 dans la branche productrice de biens et à \$10.58 dans la branche productrice de services.

CONCEPTS AND METHODS

Objectives

The Survey of Employment, Payrolls and Hours is designed to measure, on a monthly basis, the levels and month-to-month trends of employment, paid hours and earnings. These measures are compiled at detailed industrial and geographic levels.

All industries are covered by the survey with the exception of agriculture, fishing and trapping, private household services, religious organizations, and military services.

Source of Data

The statistics contained in this report are based on information obtained through a mail survey of firms, institutions and organizations of all sizes.

The firm is defined as any business entity whether incorporated or not; it comprises sole proprietorships, partnerships, corporations and other forms of organization such as co-operatives. Most firms consist of only one "establishment" (see definition under Industrial Classification) but, in some cases, the firm is made up of a number of establishments which may or may not be engaged in the same kind of economic activity

The universe for the survey is derived from a central file of employers maintained by the Business Register Division of Statistics Canada.

Industrial Classification

All firms are assigned to an industry on the basis of their principal activity. In instances where the firm is engaged in only one kind of industrial activity, the industrial classification is straightforward. Classification problems arise when a firm is active in more than one kind of classifiable industrial activity. This usually occurs when a firm operates more than one establishment. The establishment (typically a factory, mine, store or a similar unit) is defined, for statistical purposes, as the smallest separate operating entity capable of reporting all elements of basic industrial data which permit the calculation of "census value added" or "gross mark up" or "gross profit" as well as data on employment and payrolls.

For purposes of detailed geographical statistics, the establishment is often sub-divided into **reporting units** which, although not capable of reporting all basic industrial statistics, can report employment, payrolls and hours data for particular locations.

The industrial classification of the statistics contained in this report is based on the 1970 version of the Standard Industrial Classification. A description of the various industries and groups of industries is contained in the "Standard Industrial Classification Manual", Catalogue 12-501. The "S.I.C. Code" columns on the tables correspond to the codes of this manual. These tables also contain the following groupings which are not part of the "Standard Industrial Classification Manual":

- a) Industrial aggregate (031-951) represents the sum of all the industries included in the survey (see Objectives).
- b) Goods-producing industries (031-421) comprise forestry, mining, manufacturing and construction.

CONCEPTS ET MÉTHODES

Objectifs

L'enquête sur l'emploi, la rémunération et les heures de travail a pour objet de mesurer mensuellement les niveaux et les tendances de l'emploi, des heures rémunérées et des gains. Ces mesures sont rassemblées à des niveaux détaillés selon l'activité économique et le lieu déographique.

L'enquête vise tous les secteurs de l'activité économique sauf l'agriculture, la pêche et le piégeage, le service domestique des ménages, les organismes religieux et les services de la défense.

Source des données

Les statistiques présentées dans ce bulletin se fondent sur des renseignements recueillis au moyen d'une enquête postale menée auprès des entreprises et autres organismes ou établissements de toutes tailles.

Le terme entreprise désigne toute entité commerciale ou industrielle constituée ou non en corporation; il peut s'agir d'une entreprise à propriétaire unique, d'une société en nom collectif, d'une corporation ou d'une autre forme queiconque d'organisation, telle une coopérative. La plupart des entreprises ne comptent qu'un seul "établissement" (voir la définition sous la rubrique "Classement par activité économique") mais, dans certains cas, l'entreprise peut regrouper plusieurs établissements qui exercent ou non le même genre d'activité.

L'univers de l'enquête est établi à l'aide d'un registre central des employeurs tenu par la Division du registre des entreprises de Statistique Canada.

Classement par activité économique

Toutes les **entreprises** appartiennent à une branche d'activité économique déterminée en fonction de leur activité principale. Si l'entreprise n'exerce qu'un seul genre d'activité économique, le classement est simple. Les problèmes surgissent lorsqu'elle en exerce plus d'un, par exemple lorsqu'elle possède plus d'un **établissement**. À des fins statistiques, on définit l'établissement (en général une usine, une mine, un magasin ou une unité semblable) comme la plus petite unité constituant un ensemble fonctionnel distinct capable de déclarer, à l'égard de l'activité économique, tous les éléments statistiques de base qui permettent de calculer la "valeur ajoutée" ou la "majoration brute" ou le "bénéfice brut", ainsi que des données sur l'emploi et la rémunération.

Pour obtenir des statistiques géographiques détaillées, souvent on subdivise l'établissement en **unités déclarantes** qui, bien qu'elles ne puissent fournir toutes les statistiques de base, sont en mesure de déclarer des données sur l'emploi, la rémunération et les heures de travail relativement à certains endroits.

Le classement des statistiques que nous présentons dans ce volume s'inspire de la Classification des activités économiques, de 1970. Vous trouverez une description de ces diverses activités et de leurs groupements dans le bulletin de la Classification des activités économiques, nº 12-501 au catalogue. Les codes C.A.É. qui apparaissent dans les colonnes de certains tableaux de notre publication correspondent au codes de ce builetin. Les tableaux en question renferment aussi les groupes suivants, qui ne figurent pas dans la Classification des activités économiques:

- a) Ensemble des activités économiques (031-951) Il s'agit de la somme des diverses activités économiques visées par l'enquête (voir objectifs).
- b) Branche productrice de biens (031-421) Ce groupe englobe les forêts, les mines, les manufactures et la construction.

- c) Service-producing industries (501-951) consist of transportation, communication and other utilities, trade, finance, insurance and real estate, services (except for religious organizations and private households), and public administration (with the exception of military personnel, and other government services).
- d) Durable goods manufacturing (durable) includes wood industries (251-259), furniture and fixture industries (261-268), primary metal industries (291-298), metal fabricating industries except machinery and transportation equipment (301-309), machinery industries except electrical machinery (311-318), transportation equipment industries (321-329), electrical products industries (331-339), and non-metallic mineral products industries (351-359).
- e) Non-durable goods manufacturing (non-dur) is the sum of food and beverage industries (101-109), tobacco products industries (151-153), rubber and plastic products industries (162-165), leather industries (172-179), textile industries (181-189), knitting mills (231-239), clothing industries (243-249), paper and allied industries (271-274), printing, publishing and allied industries (286-289), petroleum and coal products industries (365-369), chemical and chemical products industries (372-379), and miscellaneous manufacturing industries (391-399).
- f) Building construction (404, 421) comprises building construction (404) and special-trade contractors (421).
- g) Industrial and Heavy (Engineering) construction (406, 409) includes highway, bridge and street construction (406) and other construction (409).
- h) Education services (809T) consist of kindergartens and nursery schools (801), elementary and secondary schools (802), schools of arts and performing arts (803), vocational centers, trade schools and business colleges (804), post-secondary non-university educational institutions (805), universities and colleges (806), and education and related services (809).
- i) Public administration (909-951) contains only the establishments engaged in activities that are governmental in character and those serving as internal service agencies of the public service. Government owned establishments primarily engaged in activities assigned to other industries are classified in those industries along with similar establishments owned by non-government bodies. Therefore, data included in this industry division do not represent the actual number of persons employed by government at any level.

Geographic Classification

Reporting units are assigned to a province, a census division, an economic region (for the province of Quebec and Ontario) and, where applicable, to a metropolitan or urban area. The survey selected metropolitan and urban areas as delineated for the 1981 Census of Population; these areas usually consist of the urban centre as well as the surrounding territory and had a population of 25,000 inhabitants or more. The reporting units not located in a tabulated urban area or not allocated to a compiled census division are included in the provincial and national totals.

A description of the various geographical areas is contained in the "Standard Geographical Classification Manual, 1981", Catalogue 12-567.

- c) Branche des services (501-951) Englobe les transports, les communications et autres services publics, le commerce, les finances, assurances et affaires immobilières, les services (sauf les organismes religieux et les ménages privés), et l'administration publique (à l'exception du personnel militaire et des autres services gouvernementaux).
- d) Fabrication des biens durables (durables) Englobe les industries du bois (251-259), l'industrie du meuble et des accessoires d'ameublement (261-268), l'industrie de première transformation des métaux (291-298), l'industrie des produits métalliques (sauf les machines et le matériel de transport) (301-309), la fabrication des machines (sauf le matériel électrique) (311-318), l'industrie du matériel de transport (321-329), l'industrie des appareils et du matériel électriques (331-339) et l'industrie des produits minéraux non métalliques (351-359).
- e) Fabrication des biens non durables (non dur.) Englobe l'industrie des aliments et boissons (101-109), l'industrie du tabac (151-153), l'industrie du caoutchouc et des produits en matière plastique (162-165), l'industrie du cuir (172-179), l'industrie textile (181-189), la bonneterie (231-239), l'industrie de l'habillement (243-249), l'industrie du papier et des produits connexes (271-274), l'imprimerie, l'édition et industries connexes (286-289), l'industrie du pétrole, du charbon et de leurs dérivés (365-369), l'industrie chimique et des produits connexes (372-379), et les industries manufacturières diverses (391-399).
- f) Bâtiment (404, 421) Englobe la construction de bâtiments (404) et l'activité des entrepreneurs spécialisés (421).
- g) Construction industrielle et lourde (travaux de génie) (406, 409) Englobe la construction de routes, ponts et rues (406) et autres constructions (409).
- h) Enseignement et services connexes (809T) Englobe les jardins d'enfants et écoles maternelles (801), les écoles primaires et secondaires (802), les écoles de beaux-arts (803), les centres de formation professionnelle, écoles de métiers et collèges commerciaux (804), les établissements d'enseignement postsecondaire non universitaire (805), les universités et collèges (806), et l'enseignement et services connexes (809).
- n) Administration publique (909-951) Comprend les établissements dont les activités ont un caractère essentiellement gouvernemental, et les organismes auxiliaires assurant les services internes de l'État. Les établissements publics dont l'activité dominante relève d'autres activités économiques sont classés sous les mêmes rubriques que les établissements privés semblables. Ainsi, les données publiées pour cette division économique ne représentent pas le nombre réel de personnes employées par les différents pouvoirs publics.

Classement géographique

On attribue les unités déclarantes à une province, à une division de recensement, à une région économique (pour les provinces suivantes: Québec et Ontario) et, s'il y a lieu, à une région métropolitaine ou urbaine. Les régions métropolitaines et urbaines choisies pour l'enquête sont celles du recensement de la population de 1981; ces régions, qui se composent habituellement d'un centre urbain et du territoire environnant, comptaient iors du dernier recensement 25,000 habitants ou plus. Les unités déclarantes situées en dehors de toute région urbaine indiquée dans les tableaux, ou non attribuées à une division de recensement prise en compte, font partie des totaux provinciaux et nationaux.

La description des diverses régions géographiques se trouve dans la "Classification géographique type, 1981", nº 12-567 au catalogue.

Definitions

1. Reference Period

Conceptually, the data in this report refer to the last seven days in the specified month. In practice, few firms keep payroll records covering precisely this period. Therefore, firms are asked to report for their last pay period or pay periods in each month. When the reported pay period is longer than one week, the data are reduced to a week using the number of days the firm usually operates during a week divided by the number of working days covered by the reported pay period.

If, owing to **strikes**, unpaid holidays or other similar unpaid circumstances, the data reported are not representative of the last seven days of the month, adjustments are made to reflect the economic situation of the reference period (i.e. when a strike effects the last seven days of the survey month, the derived data will reflect the strike situation).

2. Employee

All persons drawing pay for services rendered or for paid absences and for whom the employer is required to complete a Revenue Canada T-4 Supplementary Form constitute employees.

The employee concept comprises full-time employees, part-time employees (those who regularly work fewer hours than the standard work week of the establishment) and casual or temporary employees (those who are hired for discontinuous periods or on an irregular basis). It also comprises working owners, directors, partners and other officers of incorporated businesses.

The employee concept excludes owners or partners of unincorporated businesses and professional practices, the self-employed, unpaid family workers, persons doing non-remunerative work, pensioners, home workers, members of elected or appointed bodies, persons working outside Canada and military personnel. It also excludes persons who did not receive any pay from the employer for the entire survey reference period (e.g. persons on strike, persons on unpaid holidays, persons receiving remuneration from an insurance, Workmen's Compensation or other related fund, etc.); however, employees paid from the employer for a part of the reference period and unemployed or on strike for the rest are counted as employed.

The employees are classified into the following categories:

a) Employees paid by the hour

Any employee whose basic wage is expressed as an hourly rate.

b) Salaried Employees

Any employee whose basic remuneration is a fixed amount for a period of at least one week.

c) Other Employees

Those employees whose basic remuneration is in the form of commissions, piece rates, mileage allowances, etc.

Définitions

1. Période de référence

En théorie, les données sur l'emploi se rapportent aux sept derniers jours du mois de référence. Dans la pratique, peu d'entreprises tiennent des registres de paye pour cette période précise; on demande donc aux répondants de faire porter leur déclaration sur la(les) dernière(s) période(s) de paye de chaque mois. Lorsque la période de paye sur laquelle porte la déclaration dépasse une semaine, on rajuste les données en divisant le nombre de jours d'activité hebdomadaire de l'entreprise par le nombre de jours ouvrables compris dans la période de paye sur laquelle porte la déclaration.

Si, en raison d'une **grève**, d'un congé non payé ou d'autres circonstances semblables, les données déclarées ne sont pas représentatives des sept derniers jours du mois, on procède aux rajustements qui s'imposent afin de traduire la situation qui régnait pendant la période de référence (cela signifie que lorsqu'une grève touche les sept derniers jours du mois déenquête, les données qui en découlent reflètent l'état de grève).

2. Salarié

Toute personne rétribuée pour ses services ou ses absences et pour laquelle l'employeur doit remplir une déclaration T-4 Supplémentaire de Revenu Canada, est un salarié.

Le terme "salarié" désigne les salariés à temps plein, les salariés à temps partiel (ceux qui travaillent régulièrement un nombre d'heures inférieur à la semaine normale de travail de l'entreprise) et les salariés occasionnels ou temporaires (ceux qui sont embauchés de façon irrégulière ou temporaire). Il désigne aussi les propriétaires, les administrateurs, les associés et les autres dirigeants actifs des entreprises constituées en corporation.

Le concept de salarié exclut les propriétaires et les associés des entreprises non constituées en corporation et ceux des bureaux voués à l'exercice d'une profession libérale, les travailleurs autonomes, les travailleurs familiaux non rémunérés, les bénévoles, les retraités, les travailleurs à domicile, les membres des corps élus ou nommés, les personnes travaillant à l'extérieur du Canada et le personnel militaire. Sont également exclus les travailleurs n'ayant pas reçu de paye de leur employeur pendant la période de référence de l'enquête (i.e. les personnes en grève, en congé non payé, celles recevant une rémunération aux termes d'un régime d'assurance, d'une caisse d'indemnisation des accidents au travail ou d'une caisse analogue, etc.); cependant, les travailleurs rémunérés par leur employeur pour une partie de la période de référence, mais en chômage ou en grève pendant l'autre partie, sont quand même considérés comme salariés.

Les salariés sont classés dans les catégories suivantes:

a) Salariés rémunérés à l'heure

Tout salarié dont la rémunération de base est calculée selon un taux horaire.

b) Employés

Tout salarié dont la rémunération de base constitue une somme fixe versée pour une période d'au moins une semaine.

c) Autres salariés

Tout salarié dont la rémunération de base se présente sous forme de commissions, de salaire à la pièce, d'indemnités de trajet, etc.

d) Non-teaching Staff

All employees other than teachers and academic staff, i.e. president, vice-president, librarian, registrar, bursar, accountant, guidance counsellor, laboratory technician, personnel officer, and other services (e.g. janitor, caretaker, bus driver, etc.)

e) Teaching Staff

Those classified as teachers, instructors or academics in the payroll records (e.g. principal, professor, dean, head of department, master, teacher, etc.) whether they teach during the day or evening. Supply or substitute teachers are excluded.

f) Supply or Substitute Teachers

Teachers who are called in to teach whenever their services are needed either to augment the existing staff or as a short-term replacement for a full-time or part-time teacher.

3. Earnings

Earnings represent gross pay before deductions for taxes, unemployment insurance contributions, etc.

The payroll concept does not include supplementary labour costs such as employer's contributions to unemployment insurance, medical plans, Workmen's Compensation and other welfare plans, nor does it include the cost of equipment, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, bonuses paid at irregular and infrequent intervals or director's fees.

a) Gross Pay

Gross pay includes salaries, straight-time wages, piece-work and regular commission earnings, regular paid incentive, cost of living and other bonuses, overtime earnings and payments to persons absent with pay in the survey reference week.

b) Overtime Pay

All pay received for the number of hours worked in excess of the standard workday or workweek.

4. Hours

a) Total hours paid

All hours worked, including overtime hours, **plus** hours of paid absence (e.g. holidays, vacation, sick leave, jury duty, etc.)

b) Overtime Hour

The total hours for which overtime was paid. These represent the hours worked.

5. Paid Absence

Paid absence comprises paid holidays, vacation, sick leave including industrial injury and personal leave such as bereavement leave, jury duty, etc.

6. Standard Workweek

The hours in the standard workweek constitute the average number of hours of work normally scheduled in a workweek.

d) Personnel non enseignant

Tous les salariés autres que le personnel enseignant, c'est-à-dire le président, le vice-président, le bibliothécaire, le secrétaire général, l'économe, le comptable, les orienteurs, les techniciens de laboratoire, les agents du personnel, le concierge, les chauffeurs d'autobus, etc.

e) Personnel enseignant

Tout travailleur classé comme enseignant ou chargé de cours dans les dossiers du service de la paye (directeur, professeurs, doyens, chefs de département, maîtres, enseignants, etc.), qu'il enseigne le jour ou le soir. Les suppléants ou remplaçants sont exclus.

f) Suppléants ou remplaçants

Enseignants appelés à se présenter au travail lorsqu'on a besoin de leurs services soit pour accroître le personnel existant, soit pour remplacer pendant une courte période un enseignant à temps plein ou à temps partiel.

3. Gains

Les gains représentent la rémunération brute avant toutes déductions d'impôt, de cotisations d'assurance-chômage, etc.

Le concept de rémunération ne comprend pas les frais supplémentaires de main-d'oeuvre tels que les contributions de l'employeur à la caisse d'assurance-chômage, aux régimes d'assurance-maladie, à la caisse d'indemnisation des accidents du travail et à d'autres régimes de prévoyance; il ne comprend pas non plus le coût du matériel, la valeur du couvert et du gîte, les paiements en nature, les frais de déplacement, les indemnités de retraite, les gratifications versées à intervalles irréguliers et peu fréquents, ni les jetons de présence des administrateurs.

a) Rémunération brute

Comprend les salaires, les traitements à taux ordinaires, la rémunération du travail à la pièce et les commissions régulières, ainsi que les primes, indemnités de vie chère et autres gratifications versées régulièrement, les payes de surtemps et la rémunération des absences payées dans la semaine de référence de l'enquête.

b) Rémunération du temps supplémentaire

Ensemble de la rémunération versée pour le nombre d'heures de travail effectuées en sus de la journée ou de la semaine normale de travail.

4. Heures

a) Nombre total d'heures payées

Ensemble des heures travaillées, y compris les heures supplémentaires, plus les heures de congé (par ex., les jours fériés, les vacances, les congés de maladie, les congés pour service judiciaire, etc.)

b) Heures supplémentaires

Total des heures payées à un taux majoré; il s'agit d'heures réellement travaillées.

5. Absence payée

Les absences payées comprennent toutes les heures rémunérées dans le cas des jours fériés payés, des vacances, des congés de maladie, ainsi que des congés d'accident du travail et des congés pour motifs personnels tels que les congés de deuil et les congés pour service judiciaire.

6. Semaine normale de travail

Les heures d'une semaine normale de travail reflètent la moyenne des heures de travail normalement fixées pour une semaine.

7. Take-all and Take-some Units

Take-all units are reporting units of firms or organizations which are included in the survey sample with certainty every month. These include:

- a) All firms or organizations with 200 or more employees;
- b) Units of government departments and crown corporations;

Prior to the April 1988 reference month, the following were also included in the take-all:

- c) All firms with more than one reporting unit:
- d) Firms which report their survey data on computer listings rather than on standard questionnaire;
- e) Units belonging to elementary and secondary schools:
- f) Certain other pre-specified units or firms.

Take-some units are all the other firms in the universe which have a known probability of selection.

Methodology

The statistics contained in this publication are based on information obtained through a sample survey of reporting units. The data is collected by means of questionnaires mailed monthly to a sample of about 70,000 reporting units selected out of a universe of about 700,000. The sample covers all industries in scope for the survey, all provinces and territories and all sizes of units. Both the universe and the sample are updated monthly for births and deaths.

Stratification

For the determination of the survey sample size and for the purpose of the sample selection, the universe of reporting units is stratified by 12 provinces and territories, 16 industry groups and 4 size groups. (An industry group is slightly more detailed than the 1-digit industry code). The size of a unit is defined to be the total number of paid employees in that unit. The four size groups are 0 to 19, 20 to 49, 50 to 199 and 200 or more employees.

The universe of reporting units is further stratified into take-all and take-some categories as defined earlier under Definitions.

Sample allocation and selection

The size of the take-some sample for the survey has been determined so as to provide estimates of total number of paid employees at the industry group and province level with a prespecified reliability. The determination has been done under the requirement that the sample at the industry group and province level is allocated to each size group in proportion to the total estimated take-some employment in that size group. If the sampling fraction resulting from this allocation is less than .01, then a minimum sampling fraction of .01 is adopted in order to avoid unusually large weights. The allocation makes the probability of inclusion of a unit in the sample in a size stratum approximately proportional to the average number of employees per unit in that size stratum. The sample design, therefore, provides for a small sample of small reporting units if the concentration of employment is mainly in the large reporting units. On the other hand, if the proportion of total employment from small reporting units is substantial, then the sample will include a large number of small reporting units.

7. Unités à tirage complet et à tirage partiel

Les unités à tirage complet sont les unités déclarantes d'entreprises ou d'organisations incluses en permanence dans l'échantillon de l'enquête. Elles comprennent:

- a) toutes les entreprises de 200 salariés ou plus;
- b) unités des services gouvernementaux et des sociétés de la couronne:

Avant le mois de référence avril 1988, les suivantes étaient aussi incluses avec les unités à tirage complet:

- c) toutes les entreprises ayant plus d'une unité déclarante;
- d) les entreprises qui déclarent leurs données au moyen d'un imprimé d'ordinateur plutôt qu'à l'aide du questionnaire;
- e) unités propres aux écoles primaires et secondaires:
- f) d'autres unités ou entreprises préalablement choisies.

Les unités à tirage partiel sont toutes les autres entreprises qui ont une probabilité connue d'être choisies dans l'échantillon de l'enquête.

Méthodologie

Les statistiques présentées dans cette publication se fondent sur les résultats d'une enquête effectuée par sondage auprès d'unités déclarantes. Les données sont recueillies au moyen d'un questionnaire posté tous les mois à un échantillon de quelque 70,000 unités déclarantes provenant d'un univers d'environ 700,000 unités. L'échantillon couvre toutes les activités économiques que vise l'enquête, ainsi que les toutes les provinces et les territoires et toutes les tailles d'unité. Chaque mois, nous mettons à jour l'univers ainsi que l'échantillon, en tenant compte des créations et des disparitions d'unités ou d'entreorises.

Stratification

Pour déterminer la taille et la composition de l'échantillon, nous répartissons l'univers des unités déclarantes en 12 provinces et territoires, 16 groupes industriels (activités économiques) et quatre groupes de taille. (Un groupe industriel est légèrement plus détaillé qu'une industrie dont le code n'a qu'un chiffre). La taille d'une unité se définit comme étant le nombre total de salariés rémunérés que compte cette unité. Les quatre groupes de taille sont 0 à 19, 20 à 49, 50 à 199 et 200 salariés et plus.

En outre, l'univers des unités déclarantes est stratifié en deux catégories: les unités à **tirage complet** et les unités à **tirage partiel**, au sens que nous avons précisé dans la section "Définitions".

Répartition et choix de l'échantillon

La taille de la portion à tirage partiel de l'échantillon a été déterminée de façon à fournir, avec une fiabilité prédéterminée, des estimations du nombre total de salariés rémunerés, au niveau du groupe industriel et de la province. Ce calcul tient compte du fait que l'échantillon, au niveau du groupe industriel et de la province, doit être réparti dans chaque groupe de taille proportionellement à l'estimation de l'emploi total au sein de la portion à tirage partiel de chacun des groupes de taille. Si la fraction d'échantillon résultant de cette répartition est inférieure à 0.01, on la remplace alors par la fraction minimale 0.01 afin d'éviter toute pondération excessive. La répartition est telle que la probabilité qu'une unité entre dans une strate particulière de l'échantillon est à peu près proportionnelle au nombre moyen de salariés par unité comprise dans cette strate. Le plan d'échantillonnage prevoit donc un petit échantillon de petites unités déclarantes lorsque l'emploi se concentre principalement dans les grandes unités déclarantes. Par contre, si l'emploi total provenant des petites unités déclarantes est élevé, alors l'échantillon contiendra un grand nombre de petites unités déclarantes.

The number of reporting units to be selected at the industry group, province and size levels is again allocated to each three-digit industry within that industry group, province and size in proportion to the total number of reporting units in that three-digit industry. In other words, the sampling fraction used at the three-digit industry level is the same as the one determined at the industry group, province and size. However, it should be noted that a minimum sample of three units is selected whenever the use of the sampling fraction results in less than 3 units. If the universe itself is less than three units, then all the units are taken into the sample. Note that beginning with the January 1986 reference month, the sampling fractions for size group three (50 to 199 employees) in all manufacturing industries were changed to one.

A systematic sample of the predetermined number of units is drawn from the take-some universe in every three-digit industry, province and size group. The total sample is the sum of the number of take-all and selected take-some units.

Sample rotation

The design provides for rotation of the take-some sample within a three-digit industry, province and size group. Each month, approximately one-twelfth of the take-some sample is replaced. This means that units generally remain in the sample for 12 months before rotating out. The units are not eligible for reselection for at least 12 months after they rotate out.

In some small three-digit industry, province and size group cells it may not be possible to rotate out units each month. Consequently, in some small cells, units may have to stay longer than 12 months. Note that beginning with the reference month of January 1986, there is no rotation of units with 50 to 199 employees in the manufacturing industries.

Data edit and correction

All the questionnaires are initially screened for completeness by the interviewers of the Statistics Canada regional offices. Thereafter, extensive computer edit procedures for accuracy and consistency are performed at the Ottawa head office. As a result of any of the above-mentioned editing techniques, the respondent may be contacted to confirm or explain the data.

The edit procedures include the comparison of the values of key characteristics (e.g. number of employees, hours worked, salary per employee, etc.) reported for consecutive months by the same unit in order to detect large changes or errors in reporting. Whenever there is a large change or the data appears inconsistent, the record is signaled by the computer edit for review and is subject to correction or acceptance as appropriate.

Follow-up

Reporting units which are non-respondents to the initial mailing are followed up by telephone by the staff of the regional offices of Statistics Canada. Priority for this follow-up is given to (i) units which are in the sample for the first time and which have not responded, (ii) units which have not responded for two consecutive months, (iii) large non-respondent units. Follow-up also takes into account response rates and employment in the various industry groups in determining priority.

If units continue to be non-respondents even after follow-up, then data will be imputed for these units. All the records with imputed values are subject to the edits mentioned above.

Le nombre d'unités qu'il faut choisir au niveau du groupe industriel, de la province et de la taille est, en outre, réparti entre chacune des industries ayant un code à trois chiffres, lesquelles font partie du groupe industriel, de la province et de la taille considérés; cette répartition se fait proportionnellement au nombre total d'unités déclarantes comprises dans l'industrie dont le code comporte trois chiffres. En d'autres termes, la fraction d'échantillon utilisée au niveau industriel à trois chiffres est la même que celle déterminée pour le groupe industriel, la province et la taille. Il faut cependant noter que l'échantillon minimal est de trois unités, peu importe le résultat obtenu en utilisant la fraction d'échantillon. S'il y a moins de trois unités dans l'univers, toutes les unités disponibles sont incluses dans l'échantillon. Notons qu'à partir du mois de référence de janvier 1986, la fraction d'échantillon associée aux unités du groupe de la taille trois (de 50 à 199 salariés) des industries manufacturières est un.

Au sein de la portion à tirage partiel, on choisit un échantillon systématique d'un nombre prédéterminé d'unités dans chaque industrie ayant un code à trois chiffres, et ce dans chaque province et chaque groupe de taille. L'échantillon total résulte de la somme du nombre d'unités à tirage complet et du nombre d'unités à tirage partiel sélectionnées.

Rotation de l'échantillon

Pour chaque industrie (code à trois chiffres), province et groupe de taille, le plan prévoit une rotation de la portion à tirage partiel de l'échantillon. Chaque mois, le douzième environ de la portion à tirage partiel de l'échantillon est remplacé. Cela signifie qu'en général les unités demeurent 12 mois dans l'échantillon avant d'en sortir par voie de rotation. Les unités ne peuvent pas être choisies de nouveau avant au moins 12 mois suivant leur mois de sortie.

Dans le cas de certaines petites cellules (une cellule regroupe les unités de même industrie au niveau du code à trois chiffres, même province et même groupe de taille), il est parfois impossible d'assurer la rotation des unités chaque mois. Ainsi, il peut arriver que des unités demeurent plus de douze mois dans certaines petites cellules. Notez qu'à partir du mois de référence de janvier 1986, dans les industries manufacturières il n'y a aucune rotation des unités ayant de 50 à 199 salariés.

Vérification des données et correction

Au départ, les interviewers des bureaux régionaux de Statistique Canada s'assurent que tous les questionnaires sont complets. Ultérieurement, le personnel du bureau d'Ottawa vérifie par ordinateur l'exactitude et la cohérence des chiffres déclarés. À chacune de ces deux étapes de vérification, un répondant peut donc être prié de confirmer ou d'expliquer ses chiffres.

Nos procédés de vérification nous permettent de comparer les valeurs de certaines caractéristiques (nombre de salariés, heures de travail, gains par salarié, etc.) déclarées par la même unité plusieurs mois de suite. Ainsi, il est possible de déceler les grandes variations ou les erreurs, s'il en est. Chaque fois qu'une forte variation apparaît ou que les données semblent inconérentes, l'ordinateur signale le cas, et l'enregistrement est aussitôt corrigé s'il comporte effectivement une erreur.

Méthode de suivi

Le personnel des bureaux régionaux de Statistique Canada relance par téléphone les unités déclarantes qui tardent à répondre au questionnaire. Cette méthode de suivi s'adresse en priorité (i) aux unités qui font partie de l'échantillon pour la première fois et qui n'ont pas encore répondu; (ii) aux unités qui accusent un retard de deux mois consécutifs; (iii) aux grandes unités non répondantes. Pour déterminer l'ordre de priorité des suivis, on tient compte des taux de réponse et du volume de l'emploi dans les différents groupes industriels.

Lorsque des unités persistent à ne pas répondre même après le suivi, des données leurs sont imputées. Tous les enregistrements dont les données découlent d'une imputation sont soumis aux vérifications mentionnées ci-dessus.

Imputation

Imputation for non-respondent units which have been in the survey for more than one month is based on the ratio of the monthly changes. The ratio of the monthly change for each characteristic is calculated from units that responded both in the current and the previous month and is applied to the previous month's data of each non-respondent.

For the non-responding units that are new to the survey, imputation is based on other sources of information such as the employment intention of the unit, the characteristics of the responding units in the same industry group, province and size.

Estimates

The basic "building block" for producing the monthly estimates is the three-digit industry, province and size group. Estimates at higher levels are obtained by the aggregation of the above estimates. Estimates of averages are obtained by first estimating the totals for the numerator and the denominator at the desired level and then calculating the ratio. Estimates for certain sub-provincial areas are also produced, treating the sub-province as a domain. Coefficients of variation for estimates of some key characteristics at all levels are also produced.

Provision has also been made in the estimation procedure to change the weights of "unusually large" observations occurring in size groups 1, 2 and 3. These observations are termed "outliers" and are judged not to be representative of other units in that size group. The weights of the remaining units are adjusted accordingly.

Reliability of the estimates

There are two types of errors possible in estimates based on a sample survey: sampling and non-sampling.

Sampling errors occur because observations are made only on a sample rather than on the entire universe. Estimates based on a sample differ from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, interviewers and processing techniques. This difference with respect to a particular estimate is called the sampling error of the estimate.

Non-sampling errors are errors which are not related to sampling and may occur in a survey operation for many reasons. Non-response, coverage and classification errors, differences in the interpretation of the questions, incorrect information from respondents, mistakes in recording, coding and processing of data are examples of non-sampling errors. It should be noted that non-sampling errors also occur in complete censuses. In the Survey of Employment, Payrolls and Hours, efforts to reduce non-sampling errors include careful design of questionnaires, editing of data, follow-up of and imputation for non-respondents and thorough control of processing operations.

Indicators of sampling error

The sampling error, as described above, is not known. However, it can be estimated from the sample itself by using a statistical measure called the **standard error** of a survey estimate. When the standard error is expressed as a percent of the estimate, it is known as the relative standard error or **coefficient of variation**. Tables of indicators of the coefficients of variation are included in the complete set of Concepts and Methods available from the Labour Division along with an explanatory note on how to use them to judge the quality of the estimates contained in this publication.

Imputation

L'imputation de données aux unités non répondantes comprises dans le champ de l'enquête depuis plus d'un mois est basée sur le ratio des variations mensuelles de ces unités. Le ratio de la variation mensuelle d'une caractéristique se calcule à partir des unités qui ont répondu pour le mois courant et le mois précédent, et s'applique aux données du mois précédent de chaque unité non répondante.

Dans le cas des unités non répondantes qui figurent dans l'enquête pour la première fois, l'imputation se fonde sur d'autres sources d'information telles que les prévisions d'emploi de l'unité et les caractéristiques des unités déclarantes du même groupe industriel, de la même province et de la même taille.

Estimations

L'élément de base qui sert à établir les estimations est l'industrie (code à trois chiffres), la province et la taille. Les estimations plus agrégatives sont obtenues par la sommation des estimations suscites. Pour calculer les moyennes, on estime d'abord les totaux du numérateur et ceux du dénominateur, au niveau désiré, puis on en fixe le ratio. Nous produisons aussi des estimations concernant certaines régions infraprovinciales, considérant chacune de ces régions comme un domaine. Enfin, nous calculons des coefficients de variation pour les estimations de certaines caractéristiques clés, à tous les niveaux.

Le procédé d'estimation comporte en outre des mécanismes qui permettent de changer les poids lorsque des observations "exceptionnellement grandes" apparaissent chez les unités des groupes de taille 1, 2 ou 3. Ces observations, dites "aberrantes", ne sont pas représentatives des autres unités du même groupe de taille, de sorte que l'on rajuste les poids des autres unités en conséquence.

Fiabilité des estimations

En ce qui concerne les estimations basées sur un sondage, il existe deux types d'erreurs possibles, soit les erreurs d'échantillonnage et les erreurs non liées à l'échantillonnage.

Les erreurs d'échantillonnage proviennent de ce que les observations se font à partir d'un échantillon au lieu de l'univers complet. Les estimations basées sur un échantillon diffèrent des statistiques que l'on obtiendrait d'un recensement complet effectué au moyen des mêmes questionnaires, des mêmes directives, des mêmes interviewers et des mêmes techniques de traitement. Cette différence, lorsqu'il s'agit d'une estimation particulière, s'appelle erreur d'échantillonnage de l'estimation.

Les erreurs non dues à l'échantillonnage ne se rattachent pas à l'échantillon et peuvent se produire tout au long d'une enquête pour plusieurs raisons. Les cas de non-réponse, les anomalies de couverture et de classification, les différences d'interprétation des questions, la communication de renseignements inexacts par les répondants et les fautes d'entrée, de codage et de traitement des données sont autant d'erreurs non attribuables à l'échantillonnage. Il faut noter que des erreurs de ce genre peuvent aussi se produire dans les recensements. Pour l'enquête sur l'emploi, la rémunération et les heures de travail, nous avons tenté d'en réduire le risque par une formulation soignée des questionnaires, par une vérification rigoureuse des chiffres déclarés, par le travail de suivi, par l'imputation de données aux unités non répondantes et par un contrôle attentif des techniques de traitement.

Indicateurs des erreurs d'échantillonnage

L'erreur d'échantillonnage que nous venons de décrire reste inconnue. On peut cependant l'estimer à partir de l'échantillon, en utilisant une mesure appelée écart-type d'une estimation de sondage. Lorsque l'écart-type est exprimé en pource tage de l'estimation, on l'appelle écart-type relatif ou coefficient de variation. Des tableaux d'indicateurs de coefficient de variation sont compris dans la version complète des concepts et méthodes disponible de la Division du travail ainsi q'une note explicative sur la qualité des estimations comprises dans cette publication.

Statistical Presentation

1. Data Revision

Each month, statistics for the two latest months are prepared from the survey of Employment, Payrolls and Hours. Data for the most current month are titled **preliminary** estimates and are based on a response rate of around 80%. Estimates are also prepared for the month immediately preceding the most current month; these are known as **revised** estimates and are based on a higher rate of response (approximately 90%).

2. Data Release

As soon as the estimates become available, selected highly aggregated statistics are released in the Statistics Canada Daily, while detailed data are entered in the Canadian Socio-Economic Information Management System (i.e. CANSIM).

Detailed estimates appear in this report at a later date.

3. Rounding

Totals and averages for any level of geographical or industrial aggregation are calculated using unrounded figures and then rounded using the usual procedure adopted by Statistics Canada. Published employment figures are rounded to hundreds. The sum of individually rounded items may not always equal the total.

4. Averages

The average weekly earnings (including overtime) is obtained by dividing the total weekly payrolls by the number of employees. It is calculated for the total number of employees, for the hourly-rated employees, for the salaried employees, and for the other types of employees.

The average weekly overtime earnings is derived by dividing the overtime weekly payrolls by the number of employees. It is calculated for the total number of employees, the hourly-rated employees and the salaried employees.

The average hourly earnings (including overtime) is obtained by dividing the total weekly payrolls by the total weekly number of hours (the total weekly number of hours is reported for the hourly-rated employees while, for salaried employees, it is derived by multiplying the average standard workweek hours by the number of salaried employees). It is calculated for the hourly-rated employees and for the salaried employees.

The average hourly overtime earnings is calculated for the hourly-rated employees by dividing the overtime weekly payrolls by the weekly number of overtime hours reported for this group of employees.

The average weekly hours (including overtime) is obtained by dividing the total weekly number of hours by the number of employees. This statistic is calculated for the hourly-rated employees and the salaried employees.

The average weekly overtime hours is derived by dividing the weekly number of overtime hours by the number of employees. This average is calculated for the hourly-rated employees.

Présentation statistique

1. Révision des données

Chaque mois, nous préparons, à l'égard des deux derniers mois, des statistiques tirées de l'enquête sur l'emploi, la rémunération et les heures de travail. Les données du mois le plus récent sont appelées estimations préliminaires et se fondent sur un taux de réponse d'environ 80%. Nous établissons également des estimations pour le mois qui précède le mois le plus récent; il s'agit d'estimations révisées qui prennent appui sur un taux de réponse plus élevé (environ 90%).

2. Diffusion des données

Dès que les estimations requises sont disponibles, des statistiques choisies à un niveau d'agrégation élevé paraissent dans le Quotidien de Statistique Canada, tandis que les chiffres détaillés sont introduits dans le Système canadien d'information socio-économique (CANSIM).

Les estimations détaillées apparaissent dans ce bulletin plus tard.

3. Arrondissement

Les totaux et les moyennes des divers niveaux d'agrégation géographique ou industrielle sont calculés au moyen des chiffres bruts, ensuite arrondis conformément à la méthode d'arrondissement habituelle de Statistique Canada. Les nombres publiés concernant l'emploi sont arrondis à la centaine. Par conséquent, il peut arriver que la somme des chiffres arrondis individuellement ne corresponde pas au total.

4. Moyennes

On obtient les rémunérations hebdomadaires moyennes (y compris celles du temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure, d'employés et des autres catégories de salariés.

Pour obtenir les rémunérations hebdomadaires moyennes du temps supplémentaire, on divise les rémunérations hebdomadaires pour le temps supplémentaire par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure et d'employés.

On obtient les gains horaires moyens (y compris la rémunération pour le temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre total hebdomadaire d'heures travaillées (le nombre total d'heures hebdomadaires est celui déclaré pour les salariés rémunérés à l'heure, tandis que dans le cas des employés on l'établit en multipliant la moyenne des heures fournies pendant la semaine normale de travail par le nombre d'employés). Nous calculons cette statistique à l'égard des salariés rémunérés à l'heure et des employés.

Quant au temps supplémentaire, on calcule les gains horaires moyens des salariés rémunérés à l'heure en divisant les rémunérations hebdomadaires pour le temps supplémentaire par le nombre d'heures supplémentaires hebdomadaires déclarées pour ce groupe de salariés.

Pour déterminer les heures hebdomadaires moyennes (y compris les heures supplémentaires) on divise le total des heures hebdomadaires par le nombre de salariés. Cette statistique est établie à l'égard des salariés rémunérés à l'heure ainsi qu'à l'égard des employés.

Pour calculer les heures supplémentaires moyennes hebdomadaires on divise le nombre d'heures supplémentaires hebdomadaires par le nombre de salariés.

The average weekly earnings (excluding overtime) is obtained by dividing the weekly payrolls, which exclude the overtime weekly payrolls, by the number of employees. This estimate is calculated for hourly-rated employees and salaried employees.

5. Unpublished Data

A large number of non-confidential detailed industrial and geographic estimates are compiled but not included in this report. Although the reliability of these estimates may be lower than the reliability of the published estimates, these data will be available on request on a cost recovery basis.

In addition to the total number of employees for the education industry, data are also available for the teaching and non-teaching staff separately.

6. Annual Averages

Annual averages of employment, earnings and hours data for the years 1983-1988 are available. The summary reports or user-specified tabulations can be ordered, on a cost recovery basis, from the Labour Division.

7. CANSIM

Some of the data published in this report are also avaible in machine readable form through CANSIM (Canadian Socio-Economic Information Management System).

Tables giving the Cansim matrices and series numbers and the types of survey estimates which provides the user with an easy and quick link to Cansim system are available from the Labour Division at (613)951-4090. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Bldg., Ottawa, Ontario, K1A 0T6.

8. Confidentiality

The information presented in this publication has been reviewed to ensure that the confidentiality of individual responses is respected.

La moyenne des rémunérations hebdomadaires (temps supplémentaire exclu) s'obtient en divisant les rémunérations hebdomadaires, qui excluent les rémunérations hebdomadaires pour le temps supplémentaire, par le nombre de salariés. Cette estimation est calculée à l'égard des salariés rémunérés à l'heure, de même qu'à l'égard des employés.

5. Données non publiées

Nous établissons, aux niveaux industriel et géographique, un grand nombre d'estimations non confidentielles détaillées qui, toutefois, ne figurent pas dans le présent ouvrage. Bien que leur fiabilité puisse être plus faible que celle des estimations publiées, ces données peuvent être obtenues sur demande sur une base de recouvrement des coûts.

Outre le chiffre total des salariés du domaine de l'éducation, nous pouvons aussi fournir des données distinctes concernant le personnel enseignant et le personnel non enseignant.

6. Moyennes annuelles

Les moyennes annuelles pour l'emploi, la rémunération et les heures de travail sont disponibles pour les années 1983-1988. Ces rapports sommaires ou des tolalisations spéciales sont diponibles, moyennant le recouvrement des coûts, de la Division du travail.

7. CANSIM

Certaines données qui apparaissent dans la présente publication sont également disponibles sous une forme ordinolingue dans CANSIM (Système canadien d'information socio-économique).

Des tableaux indiquant le numéro de matrices et les numéro de series de Cansim ainsi que les types d'estimations de l'enquête, lesquels fournissent à l'utilisateur un moyen d'accès facile et rapide au système Cansim, sont disponibles auprès de la Division du travail au (613)951-4090. Pour de plus amples informations concernant CANSIM téléphoner à (613) 951-8200 ou écrire à Division de la diffusion informatique des données, Statistique Canada, immeuble R.H. Coats, Ottawa, Ontario, K1A OT6.

8. Confidentialité

Les données du présent bulletin sont vérifiées afin de s'assurer qu'elles respectent le caractère confidentiel des réponses fournies par les entreprises.

NOTES TO USERS

I. UPCOMING CHANGES TO SURVEY (1989)

Several important changes to the Employment, Earnings and Hours program are being planned for 1989. These changes are intended to improve the usefulness and accuracy of the information we provide to our users.

The major changes are:

- New Standard Industrial Classification (SIC): The 1980 version of the SIC will replace the 1970 version now in use;
- Publication Re-design: the Employment, Earnings and Hours publication (catalogue 72-002) is being completely redesigned and will contain only two-digit level and higher industry detail rather than the three-digit level detail it currently provides;
- Publication Price Reduction: Expected cost reductions through the publication re-design will result in a reduced publication price:
- Special products: Custom-tailored reports or more detailed data (eg. 3 digit industry or sub-provincial detail) than that contained in the publication will be provided faster and more economically;
- Conversion to a new survey sampling frame data base to improve coverage and data quality:
- Historical Data: Data will be revised on a consistent basis back to 1983 on the 1980 SIC version to provide better level and trend estimates.

More information on these upcoming changes will be announced in future publications.

II. CHANGES TO SURVEY (1983-1988)

Data revisions - September 1988

There has been a revision to the data published for the month of September 1988 in certain industries for Manitoba and Canada. All variables (number of employees and average weekly earnings) may be affected by the revisions.

For more information see the errata in the December 1988 issue.

New Take-all Definition

A change in the definition of Take-all units was introduced with the release of the April 1988 estimates of Employment, Earnings and Hours.

AVIS AUX UTILISATEURS

I. CHANGEMENTS PROCHAINS À L'ENQUÊTE (1989)

La Division du travail prépare pour l'année 1989, plusieurs changements importants à son programme sur l'Emploi, les gains et la durée du travail. Ces changements ont pour but d'améliorer l'utilité et la précision des renseignements fournis aux utilisateurs.

Les principales modifications sont:

- une nouvelle classification type des industries (CTI): la version 1980 de la CTI remplacera la version 1970 présentement utilisée:
- nouvelle conception de la publication: la publication Emploi, gains et durée du travail (72-002 au catalogue) sera transformée et contiendra seulement des détails aux niveau des codes industriels à 2 chiffres ou des agrégations plus élevées (1 chiffre ou agrégations spéciales) plutôt que le détail au niveau du code à 3 chiffres présentement disponibles;
- réduction dans le prix de la publication: il est anticipé qu'une réduction des coûts de production de la publication suite aux modifications apportées, résultera en une diminution du prix;
- produits spéciaux: des totalisations propres aux besoins des utilisateurs ou des totalisations contenant plus de détails (codes à 3 chiffres ou données sous-provinciales) que la publication, seront disponibles de façon plus rapide et économique;
- conversion à une nouvelle base de sondage afin d'améliorer la couverture et la qualité des données;
- données historiques: les données seront révisées à partir de 1983, sur la base de la CTI 1980 pour permettre de meilleurs estimés du niveau et de la tendance.

Plus d'informations sur ces changements vous seront communiquées dans les prochains numéros de cette publication.

II. CHANGEMENTS À L'ENQUÊTE (1983-1988)

• Révisions aux données - Septembre 1988

Des révisions ont été apportées aux chiffres publiés pour le mois de septembre 1988 dans certaines industries pour le Manitoba et le Canada. Toutes les variables (emploi et rémunération hebdomadaire moyenne) peuvent être affectées par les révisions.

Pour de plus amples renseignements voir l'errata dans le numéro de décembre 1988.

Nouvelle définition des unités à tirage complet

Une modification a été apportée à la définition des unités à tirage complet à partir d'avril 1988 concernant l'emploi, les gains et la durée du travail.

Firms with more than one reporting unit but less than 200 employees will no longer be surveyed as part of the Take-all group. Although these firms represent a large number of reporting units they account for a small percentage of total employment. The change was made to reduce the cost of the Survey of Employment, Payrolls and Hours, to reduce respondent burden and, ultimately, to produce a more useful and consistent data series representing all firms with 200 or more employees.

Because the immediate introduction of the new definition would result in breaks in the Take-all and All units series, measures are being taken to maintain the continuity of the existing series. A complete revision will be undertaken in 1989 (see Upcoming Changes to Survey). From April 1988 onward, the month-to-month movements of the Take-all series will be based on data trends of firms with more than 200 employees.

Data Revisions - January to April 1987

Changes to the survey of Employment, Payrolls and Hours (SEPH) sampling frame were phased-in over a four-month period beginning with January 1987. Major changes included improvements to the coverage of firms in the survey sampling frame and a re-assignment of some establishments to more appropriate industry, geographic and / or employment size categories. Revised sampling fractions were also implemented in a number of areas to improve the efficiency of the sample. These changes were designed to improve the accuracy and reliability of the estimates. The phase-in over the four months, however, affected the month-to-month comparability of the published estimates over this period.

Data for the months of January, February and March 1987 were revised from the originally published information to remove the impact of the phase-in and to provide data for the first four months of 1987 on a consistent basis. The revised data were published in the May 1987 issue of this catalogue.

Adjustments to SEPH data for the period 1983-1986 are required when making comparisons with the 1987 estimates and later estimates. Adjustment factors needed to make such comparisons and explanations on their use were published in the May 1987 issue. The factors are also available on request from the Labour Division.

Sample Size Increase in Manufacturing Industries

The sample size of the Survey of Employment, Payrolls and Hours was increased by 2,000 establishments in the manufacturing industry in order to improve the quality of the estimates at the detailed industry level. Commencing with the data for January, 1986, all manufacturing firms with 50 to 199 employees were included in the sample with

Les entreprises ayant plus d'une unité déclarante mais moins de 200 salariés ne font plus partie, aux fins de l'enquête, du groupe d'unités à tirage complet. Ces entreprises représentent une grande proportion des unités déclarantes mais un faible pourcentage du total de l'emploi. Le but de cette modification est de réduire le coût de l'enquête sur l'emploi, la rémunération et les heures de travail, de réduire le fardeau de réponse et de produire finalement une série de données plus utiles et cohérentes à l'égard des entreprises ayant 200 salariés ou plus.

Comme l'introduction immédiate de la nouvelle définition entraînerait une discontinuité dans les séries concernant les unités à tirage complet et l'ensemble des unités, on a pris des mesures pour maintenir la continuité des séries actuelles. Une révision complète sera exécutée en 1989 (voir les changements prochains à l'enquête). À partir d'avril 1988, les variations mensuelles de la série des unités à tirage complet seront fondées sur les tendances des entreprises ayant plus de 200 salariés.

Révisions aux données - Janvier à avril 1987

Les modifications apportées à la base de sondage de l'enquête sur l'emploi, la rémunération et les heures de travail (EERH) ont été incorporées au cours d'une période de quatre mois à compter du mois de référence de janvier 1987. Les principales modifications comprennent des améliorations au champ d'observation des entreprises dans la base de sondage de l'enquête, la réaffectation de certains établissement et de la taille de l'emploi et des révisions aux fractions de sondage dans un certain nombre de domaines. Ces modifications sont destinées à améliorer la précision et la fiabilité des estimations. La mise en oeuvre des modifications au cours de ces quatre mois a cependant affecté la comparabilité d'un mois à l'autre des estimations publiées pendant cette période.

Les données pour janvier, février et mars 1987 ont été révisées par rapport aux estimations déjà publiées afin d'éliminer les conséquences de la mise en oeuvre des modifications et de présenter des données pour les quatre premiers mois de 1987 sur une base cohérente. Ces données révisées ont été publiées dans le numéro de mai 1987.

Il faut corriger les données de l'EERH pour la période 1983 à 1986 lorsque l'on procède à des comparaisons avec les estimations de l'année 1987 ou des années subséquentes. Les facteurs d'ajustement nécessaires pour effectuer ces comparaisons et les explications pour leur emploi ont été publiés dans le numéro de mai 1987. Les facteurs sont aussi disponibles sur demande auprès de la Division du travail.

Augmentation de la taille de l'échantillon dans les industries manufacturières

Dans le but d'améliorer la qualité des séries publiées par l'enquête sur l'emploi, la rémunération et les heures de travail sur les industries manufacturières, 2,000 entreprises ont été ajoutées à l'échantillon de ce secteur. À partir du mois de référence de janvier 1986, toutes les entreprises manufacturières ayant 50 à 199 salariés sont incluses dans l'échantillon. Auparavant, seul un échantillon de ces

certainty. These firms had previously been surveyed on a sample basis. Estimates originally published for January and February, 1986, did not include these additional units so that the impact on the manufacturing data and the Industrial Aggregate could be assessed prior to publication. Data for January and February, revised to reflect this change, were first presented in the March 1986 issue of this publication.

Industrial Composite

Note that the publication of the Estimates of Average Weekly Earnings for "Industrial Composite" was terminated with the December 1985 estimates.

Revisions to Historical Data (1984)

There has been a revision to the data published monthly in the January to July 1984 issues of Catalogue 72-002 for certain industries. The revised series appear in the September 1984 issue. All data variables at the Canada, Provinces and Territories level may be affected.

III. NOTE ON SUB-PROVINCIAL DATA

DATA AVAILABILITY

Effective with June 1985, data on urban areas were removed from Catalogue 72-002, Employment, Earnings and Hours due to:

- limitations regarding data reliability
- increasing cost of producing the publication

SOURCES OF ACCESS TO THESE DATA

- a) Annual Averages and Monthly Estimates Reports (1987) and (1988) Annual Averages and Time Series Report (1983 to 1986)
- data available for:

Employment, Earnings and Hours for total manufacturing and industrial aggregate for the 25 Census Metropolitan Areas in Canada. Also included for Canada and provinces are major variables and industries.

Price: \$50.00 hard copy \$75.00 diskettes

available from:

Dissemination Section, Labour Division, Statistics Canada, Ottawa (613) 951-4090 and, Regional Reference Centres of Statistics Canada (Refer to the telephone numbers listed on the reverse of the front page of this catalogue).

entreprises était enquêté. Les chiffres originalement publiés pour les mois de janvier et de février 1986 n'incluaient pas ces unités additionnelles. Le but de ce délai était de déterminer l'impact sur les estimations des industries manufacturières et de l'ensemble des activités économiques. Il est important de noter que les chiffres de janvier et février, révisés pour refléter le changement, ont été publiés dans le numéro de mars 1986 de ce catalogue.

Ensemble des industries

Veuillez noter que les Estimations de la rémunération hebdomadaire moyenne pour "l'ensemble des industries" ont cessé d'être publiées avec les estimations révisées de décembre, 1985.

Révisions aux données historiques (1984)

Des révisions ont été apportées aux chiffres publiés dans le catalogue mensuel numéro 72-002 pour les mois de janvier à juillet 1984, pour certaines industries. Les séries révisées figurent dans le catalogue du mois de septembre 1984. Toutes les variables aux niveaux du Canada, provinces et territoires peuvent être affectées.

III. NOTE SUR LES ESTIMATIONS INFRA-PROVINCIALES

• DISPONIBILITÉ DES ESTIMATIONS

Depuis juin 1985, les estimations pour les régions urbaines ne paraissent plus dans le n° 72-002 au catalogue, Emploi, gains et durée du travail. Ces estimations ont été suprimées de la publication pour les raisons suivantes:

- limites associées à la fiabilité des données
- augmentation des coûts de production de la publication

SOURCES D'ACCES AUX ESTIMATIONS

- a) Rapports des moyennes annuelles et des estimations mensuelles (1987) et (1988) Rapport des moyennes annuelles et des séries chronologiques (1983 à 1986)
- données disponibles pour:

Emploi, gains et durée du travail pour le total des industries manufacturières et l'ensemble des activités pour les 25 régions métropolitaines de recensement du Canada. Les principales variables des groupes industriels majeurs pour le Canada et les provinces sont également inclues.

Prix: \$50.00 pour l'imprimé \$75.00 pour les disquettes

• disponible auprès de:

Section de diffusion, Division du Travail, Statistique Canada, Ottawa (613) 951-4090 et, Centres régionaux de consultation de Statistique Canada (consulter les numéros de teléphone qui se trouvent au verso du couvert de ce catalogue).

b) Data confirmation/special tabulations

data available for:

Employment, Earnings and Hours variables including their coefficients of variation, for all geographic levels and industrial activities. The release of these data are subject to confidentiality.

available from:

Dissemination Section, Labour Division, Statistics Canada, Ottawa (613) 951-4090

c) CANSIM (Statistics Canada's computerized data bank)

data available for:

Employment and earnings for all sub-provincial areas and for selected industrial detail.

available from:

Electronic Data Dissemination Division, Statistics Canada, Ottawa (613) 951-8200

LIMITATIONS ASSOCIATED WITH THE RELIABILITY OF SUB-PROVINCIAL DATA

a) Methodological constraints

The survey was not designed to produce reliable estimates at the sub-provincial level. Estimation of variables for the sub-provincial level is derived using the provincial weights. The survey methodology, therefore, does not guarantee that the sample in any one sub-provincial area will be representative of the population of that area. In addition, the sample in an area may change from one month to the next due to rotation of units into and out of the sample, which may cause a shift in the level of the estimate.

b) Changes to the sampling frame

In January 1987, changes were made to the SEPH sampling frame (see May 1987, publication 72-002 Employment, Earnings and Hours). These modifications caused a break in the series produced by the survey. Thus, it is not possible to compare data for 1987 and subsequent years to that of previous years. At present, adjustment factors are only available for Canada and provinces.

c) Introduction of the new take-all definition

Since April 1988, firms with more than one reporting unit but less than 200 employees, are no longer surveyed as part of the take-all group and therefore are not included with certainty each month in the survey. Although measures were taken to maintain the continuity of existing series at the national and provincial levels, impacts due to the introduction of the new take-all definition have not been assessed on sub-provincial data.

b) Confirmation des estimations/production de totalisations spéciales

données disponibles pour:

L'emploi, la rémunération et les heures de travail ainsi que leur coefficient de variation pour tous les niveaux géographiques et activités économiques. La diffusion de ces données est cependant restreinte par la confidentialité.

• disponible auprès de:

Section de diffusion, Division du travail, Statistique Canada, Ottawa (613) 951-4090

c) CANSIM (base de données informatisées de Statistique Canada)

• données disponibles pour:

Emploi et gains pour toutes les régions infra-provinciales et pour certaines activités économiques.

• disponible auprès de:

Division de la diffusion informatique des données, Statistiques Canada, Ottawa (613) 951-8200

LIMITES ASSOCIÉES À LA FIABILITÉ DES ESTIMATIONS INFRA-PROVINCIALES

a) Contraintes méthodologiques

L'enquête n'a pas été conçue de façon à produire des estimations fiables pour les régions infra-provinciales. Ces estimations sont dérivées en utilisant la pondération assignée aux unités sélectionnées au niveau de la province. La méthodologie de l'enquête ne garantit donc pas que l'échantillon soit représentatif de la population au niveau infra-provincial. De plus, l'échantillon d'une région peut être modifié d'un mois à l'autre dû à la rotation d'unités qui entrent et sortent de l'enquête, ce qui peut causer un changement dans le niveau des estimations.

b) Changements effectués à la base de sondage

En janvier 1987, des changements effectués à la base de sondage de l'EERH ont entraîné une brisure dans les séries produites par l'enquête (voir catalogue 72-002 Emploi, gains et durée du travail, mai 1987) Ainsi, on ne peut pas comparer les estimations de 1987 et années subséquentes avec celles des années antérieures car en ce moment les facteurs d'ajustement sont disponibles uniquement pour le Canada et les provinces.

c) Introduction de la nouvelle définition des unités à tirage complet

À compter d'avril 1988, les entreprises ayant plus d'une unité déclarante mais moins de 200 salariés ne font plus partie du groupe d'unités à tirage complet, c'est-à-dire qu'elles ne sont plus recensées de façon permanente dans l'enquête. Bien que des mesures aient été prises pour maintenir la continuité des séries actuelles pour le Canada et les provinces, l'impact causé par l'introduction de la nouvelle définition des unités à tirage complet n'a pas été évalué au niveau infra-provincial.

DATA QUALITY INDICATOR

Coefficient of Variation

The sample estimate and its coefficient of variation may be used to derive a standard error and to construct a confidence interval within which the unknown census value is expected to be contained (see note on coefficient of variation for its utilization). Although the coefficient of variation attached to the sub-provincial estimates gives some indication of the standard deviation of units in the sample. it does not measure the reliability of the level and the consistency of the estimate from one time period to another. High standard errors or coefficients of variation which change significantly from month to month indicate that the sample is changing and that the monthly movements should be interpreted with caution.

The user is encouraged to treat the sub-provincial data as a complimentary source of information to the more reliable SEPH estimates at higher levels of geographic and industrial aggregation.

Note: It must be noted that most of the products and services mentioned above are available on a cost-recovery basis. For additional information on any of the above issues, or on the use or application of data series, please contact Renée Arsenault of the Labour Division at (613)951-4090.

• INDICATEUR DE LA QUALITÉ DES ESTIMATIONS

Coefficient de variation

En utilisant l'estimation et le coefficient de variation, il est possible de dériver un écart-type et de construire un intervalle de confiance pour cerner la valeur inconnue qui aurait été produite par un recensement (voir note sur le coefficient de variation pour son utilisation). Le coefficient de variation rattaché aux estimations infra-provinciales fournit une indication de l'écart-type des unités dans l'échantillon sans toutefois mesurer la fiabilité du niveau et de la cohérence de ces estimés d'un mois à l'autre. Lorsque l'écart-type est élevé ou que le coefficient de variation varie beaucoup d'un mois à l'autre, ceci indique que l'échantillon est instable et que les variations mensuelles des estimations doivent être interprétées avec précaution.

L'utilisateur est encouragé à consulter les estimations infra-provinciales comme source d'information complémentaire à des estimations plus fiables produites par l'EERH, à des niveaux géographiques et économiques plus élevés.

Nota: Il est à noter que la plupart des services et produits ci-haut mentionnés sont disponibles sur une base de recouvrement des coûts. Pour de plus amples renseignements sur les sujets précités, ou sur l'utilisation et l'application de séries alternatives, communiquer avec Renée Arsenault de la Division du travail à (613)951-4090.
